

**On approval of risk assessment criteria and checklists in the areas of medical services (aid), circulation of medicines and medical devices**

*Unofficial translation*

Joint order of the Minister of Health of the Republic of Kazakhstan dated November 15, 2018 № ДР DSM-32 and Minister of National Economy of the Republic of Kazakhstan dated November 15, 2018 № 70. Registered in the Ministry of Justice of the Republic of Kazakhstan on November 15, 2018 № 17744.

**Unofficial translation**

Footnote. The title is amended by the joint order of the Acting Minister of Health of the Republic of Kazakhstan dated 31.03.2025 № 27 and the Deputy Prime Minister - Minister of National Economy of the Republic of Kazakhstan dated 07.04.2025 № 16 (effective ten calendar days after the date of its first official publication).

In accordance with paragraphs 5 and 6 of Article 141, paragraph 1 of Article 143 of the Entrepreneurial Code of the Republic of Kazakhstan **WE HEREBY ORDER:**

**Footnote. The preamble is in the wording of the joint order of the Minister of Healthcare of the Republic of Kazakhstan dated 30.11.2022 № ҚР ДСМ-147 and the Minister of National Economy of the Republic of Kazakhstan dated 01.12.2022 № 115 (shall be enforced from 01.01.2023).**

1. To approve:

1) criteria for assessing the risk in the provision of medical services (aid) in accordance with Annex 1 to this joint order;

2) a checklist in the field of medical services (aid) in relation to entities (facilities) providing inpatient, inpatient replacement care in accordance with Annex 2 to this joint order;

3) a checklist in the field of medical services (aid) in relation to entities (facilities) providing outpatient care (primary health care and consultative diagnostic assistance) in accordance with Annex 3 to this joint order;

4) a checklist in the field of medical services (aid) in relation to entities (facilities) of maternity care and (or) inpatient organizations that include maternity and neonatal pathology departments in accordance with Appendix 4 to this joint order;

5) a checklist in the field of medical services (aid) in relation to entities (facilities) providing cardiological and cardiac surgical care in accordance with Annex 5 to this joint order;

6) a checklist in the field of medical services (aid) in relation to entities (facilities) providing hemodialysis care in accordance with Annex 6 to this joint order;

- 7) a checklist in the field of medical services (aid) in relation to entities (facilities) providing dental care in accordance with Annex 7 to this joint order;
- 8) a checklist in the field of medical services (aid) in relation to entities (facilities) providing physiological care in accordance with Annex 8 to this joint order;
- 9) a checklist in the field of medical services (aid) in relation to entities (facilities) providing oncological care in accordance with Annex 9 to this joint order;
- 10) a checklist in the field of medical services (aid) in relation to entities (facilities) providing medical and social assistance in the field of mental health in accordance with Annex 10 to this joint order;
- 11) a checklist in the field of medical services (aid) in relation to entities (facilities) providing laboratory services in accordance with Annex 11 to this joint order;
- 12) a checklist in the field of medical services (aid) in relation to entities (facilities) providing emergency medical care, medical assistance in the form of medical aviation in accordance with Annex 12 to this joint order;
- 13) a checklist in the field of medical services (aid) in relation to entities (facilities) engaged in activities in the field of HIV prevention in accordance with Annex 13 to this joint order;
- 14) a checklist in the field of medical services (aid) in relation to entities (facilities) operating in the field of blood services in accordance with annex 14 to this joint order;
- 15) criteria for assessing the risk in the field of circulation of medicines, medical devices and medical equipment in accordance with Annex 15 to this joint order;
- 16) a checklist in the field of circulation of medicines and medical devices for compliance with the qualification requirements for entities (facilities) of control in accordance with Annex 16 to this joint order;
- 17) a checklist in the field of circulation of medicines, medical devices and medical equipment in relation to medical organizations on issues of drug provision in accordance with Annex 17 to this joint order;
- 18) a checklist in the field of circulation of medicines, medical devices and medical equipment in relation to entities (facilities) of pharmaceutical activity engaged in the production of medicines, medical devices and medical equipment in accordance with Annex 18 to this joint order;
- 19) a checklist in the field of circulation of medicines, medical devices and medical equipment in relation to entities (facilities) of pharmaceutical activity engaged in the manufacture of medicines and medical devices in accordance with Annex 19 to this joint order;
- 20) a checklist in the field of circulation of medicines, medical devices and medical equipment in relation to entities (facilities) of pharmaceutical activity engaged in the wholesale sale of medicines, medical devices and medical equipment in accordance with annex 20 to this joint order;

21) a checklist in the field of circulation of medicines, medical devices and medical equipment in relation to entities (facilities) of pharmaceutical activity engaged in the retail sale of medicines, medical devices and medical equipment in accordance with appendix 21 to this joint order;

22) a checklist in the field of medical services (aid) in relation to entities (facilities) providing pathoanatomic diagnostics in accordance with annex 22 to this joint order;

23) a checklist in the field of medical services (aid) in relation to entities (facilities), regardless of their activities in accordance with annex 23 to this joint order;

24) a checklist in the field of medical services (aid) in relation to entities (facilities) providing assistance in the field of nuclear medicine in accordance with annex 24 to this joint order;

25) a checklist in the field of circulation of medicines and medical devices in relation to the state expert organization in the field of circulation of medicines and medical devices in accordance with annex 25 to this joint order;

26) a checklist in the field of medical services (aid) in relation to entities (facilities) providing medical care for occupational pathology in accordance with annex 26 to this joint order;

27) a checklist for provision of medical services (aid) to entities (facilities) providing medical care to persons held in pre-trial detention facilities and institutions of the penal enforcement (penitentiary) system in accordance with annex 27 to this joint order.

**Footnote. Paragraph 1 is amended by the joint order of the Acting Minister of Health of the Republic of Kazakhstan dated 31.03.2025 № 27 and Deputy Prime Minister - Minister of National Economy of the Republic of Kazakhstan dated 07.04.2025 № 16 (effective ten calendar days after the date of its first official publication).**

2. To recognize invalid the joint order of the Minister of Healthcare and Social Development of the Republic of Kazakhstan dated December 29, 2015 № 1064 and the Minister of National Economy of the Republic of Kazakhstan dated December 29, 2015 № 831 "On approval of risk assessment criteria and checklists in the sphere of medical services quality, circulation of medicines, medical products and medical equipment "(registered in the Register of state registration of regulatory legal acts for the number 12763, published March 25, 2016 in the information and the legal system "Adilet").

3. The committee of public health protection of the Ministry of Healthcare of the Republic of Kazakhstan shall ensure:

1) state registration of this joint order at the Ministry of Justice of the Republic of Kazakhstan;

2) within ten calendar days from the date of state registration of this joint order sending its copy in the Kazakh and Russian languages to the Republican state enterprise on the right of

economic management "Republican Center for Legal Information" for official publication and inclusion into the Standard control bank of regulatory legal acts of the Republic of Kazakhstan;

3) placement of this joint order on the official Internet resources of the Ministry of Healthcare of the Republic of Kazakhstan and the Ministry of National Economy of the Republic of Kazakhstan after its official publication;

4) within ten working days after the state registration of this joint order in the Ministry of Justice of the Republic of Kazakhstan, submission of information on implementation of measures provided for in subparagraphs 1), 2) and 3) of this paragraph to the Legal department of the Ministry of Healthcare of the Republic of Kazakhstan.

4. Control over implementation of this joint order shall be entrusted on the Vice-Minister of Healthcare of the Republic of Kazakhstan.

5. This joint order shall be enforced upon expiry of ten calendar days after its first official publication.

Appendix 1  
to the joint order of the  
Minister of Healthcare of the  
Republic of Kazakhstan  
dated November 15, 2018  
№ KR HCM-32 and the Minister of  
National Economy of the  
Republic of Kazakhstan  
dated November 15, 2018 № 70

## **Criteria for assessing the risk in provision of medical services (aid)**

Footnote. Appendix 1 - as amended by the joint order of the Acting Minister of Health of the Republic of Kazakhstan dated 31.03.2025 № 27 and Deputy Prime Minister - Minister of National Economy of the Republic of Kazakhstan dated 07.04.2025 № 16 (effective ten calendar days after the date of its first official publication).

## **Chapter 1. General provisions**

1. These Criteria for assessing the risks in provision of medical services (aid) (hereinafter – Criteria) have been developed in accordance with paragraphs 5 and 6 of Article 141 and

paragraph 1 of Article 143 of the Entrepreneurial Code of the Republic of Kazakhstan, the Order of the Acting Minister of National Economy of the Republic of Kazakhstan dated June 22, 2022 № 48 "On approval of the Rules for the formation of a risk assessment and management system by regulatory state bodies and on amendments to the Order of the Acting Minister of National Economy of the Republic of Kazakhstan dated July 31, 2018 № 3 "On approval of the Rules for the formation by state bodies of a risk assessment system and a form of test sheets" (registered in the Register of state registration of regulatory legal acts under № 28577) and the order of the Acting Minister of National Economy of the Republic of Kazakhstan dated July 31, 2018 № 3 "On approval of the form of the checklist" (registered in the Register of state registration of regulatory legal acts under № 17371).

2. The following concepts are used in these Criteria:

- 1) score is a quantitative measure of risk calculation;
- 2) minor violations – violations of the requirements of the legislation of the Republic of Kazakhstan in the field of medical services (aid), non-compliance with which has led to and (or) may lead to formally committed, but not causing any harm to human life and health;
- 3) significant violations – violations, including non-compliance with the requirements of legislation in the field of medical services (aid), not related to gross and minor violations;
- 4) risk in the provision of medical services (aid) – the likelihood of harm to human life or health, the legitimate interests of individuals and legal entities, and the state as a result of the medical activities of the entity (object) of control;
- 5) gross violations – intentional or negligent clear and significant violation of the legislation of the Republic of Kazakhstan in the field of medical services (aid), non-compliance with which has caused and (or) may cause serious consequences to human health;
- 6) risk assessment and management system – the process of making managerial decisions aimed at reducing the likelihood of adverse factors by classifying the entities (objects) of control by degrees of risk for subsequent preventive control with visits to the entities (object) of control and (or) inspections for compliance with qualification requirements or licensing requirements for issued permits, requirements for sent notifications (further – verification of compliance with the requirements) in order to limit the freedom of entrepreneurship to the minimum possible extent, while ensuring an acceptable level of risk, as well as aimed at changing the level of risk for a particular entity (object) of control and (or) releasing such an entity (object) of control from preventive control with a visit to the entity (object) of control and (or) compliance checks;
- 7) objective criteria for assessing the degree of risk (hereinafter referred to as objective criteria) are criteria used to select entities (objects) of control depending on the degree of risk in the provision of medical services (aid) in carrying out activities and not directly dependent on an individual entity (object) of control;

8) subjective criteria for assessing the degree of risk (hereinafter referred to as subjective criteria) are criteria for assessing the degree of risk used to select entities (objects) of control for preventive control and verification of compliance with requirements, depending on the performance of a particular entity (object) of control.

3. The criteria for assessing the degree of risk for conducting a compliance check and preventive control with a visit to the entity (object) of control are formed by defining objective and subjective criteria.

## **Chapter 2. Objective criteria for assessing the risk for conducting compliance checks and preventive control of entities (objects) of control**

4. Objective criteria are determined by determining the risk of state control, which is carried out taking into account one of the following criteria:

1) the level of danger (complexity) of the entity (object) depending on the activity carried out;

2) the scale and severity of the possible negative consequences of harm in the course of medical activity;

3) the possibility of adverse effects on human health, the legitimate interests of individuals and legal entities, and the state.

5. Based on the analysis of all possible risks, the entities (objects) of control are divided into three degrees of risk (high, medium and low).

The entities (objects) of high-risk control include organizations providing inpatient care (district hospital, numbered district hospital, multidisciplinary interdistrict hospital, city hospital, multidisciplinary city hospital, multidisciplinary city children's hospital, multidisciplinary regional hospital, multidisciplinary regional children's hospital), entities (objects) of obstetric care, entities (objects), providing hemodialysis care, emergency medical services and medical aviation organizations, organizations operating in the field of blood services, dental polyclinic (center, office), phthisiopulmonological organizations, cancer center or dispensary, nuclear medicine centers, disaster medicine organizations, healthcare organizations operating in the field of HIV infection prevention.

Entities (objects) of medium-risk control include entities (objects) providing primary health care (medical center, paramedic-obstetric center, outpatient clinic, primary health care center, numbered district polyclinic, district polyclinic, city polyclinic), entities (objects) providing specialized medical outpatient care, healthcare organizations performing pathoanatomic diagnostics, healthcare organizations performing laboratory diagnostics, inpatient organizations, providing medical care in the field of mental health, traditional medicine facilities.

Entities (objects) of low-risk control include entities (objects) of control providing restorative treatment and medical rehabilitation, and entities (objects) of control providing palliative care and nursing care.

6. In respect of entities (objects) of control classified as high and medium risk, compliance checks, preventive control with a visit to the entity (object) of control, preventive control without a visit to the entity (object) of control and an unscheduled inspection are carried out.

7. In respect of entities (objects) of control classified as low-risk, compliance checks, preventive control without visiting the entity (object) of control and an unscheduled inspection are carried out.

### **Chapter 3. Subjective criteria for assessing the risk for conducting compliance checks and preventive control of entities (objects) of control**

8. The definition of subjective criteria is carried out using the following steps:

- 1) database formation and information collection;
- 2) information analysis and risk assessment.

9. The formation of a database and collection of information are necessary to identify entities (objects) of control that violate the legislation of the Republic of Kazakhstan.

The processes of collecting and processing information are fully automated and allow for the possibility of verifying the correctness of the data received.

10. The following sources of information are used to determine subjective criteria for assessing the degree of risks for conducting preventive control with a visit to the entity (object) of control:

- 1) the results of previous unscheduled inspections and preventive control with visits to the entities (objects) of control (in this case, the severity of violations is established in case of non-compliance with the requirements set out in the checklists);
- 2) the results of monitoring reports and information provided by the entity (object) of control;
- 3) the results of preventive control without visiting the entity (object) of control (final documents issued based on the results of preventive control without visiting the entity (object) of control).

11. The following information sources are used to determine the subjective criteria for assessing the degree of risks for conducting a compliance check:

- 1) the results of previous inspections in relation to the entities (objects) of control;
- 2) the results of certification and professional development of employees of entities (objects) of control over the past 5 years;
- 3) the availability of accreditation of entities (objects) of control with the urgency of the permits issued;
- 4) monitoring of reports and information provided by the entity (object) of control;
- 5) the results of the analysis of information provided by government agencies and organizations.

12. Based on the available sources of information, regulatory government agencies form subjective criteria to be evaluated.

The analysis and assessment of subjective criteria makes it possible to concentrate the verification of compliance with requirements and preventive control of the entity (object) of control in relation to the entity (object) of control with the greatest potential risk.

In terms of the degree of risk according to subjective criteria, the entity (object) of control refers to:

- 1) the high degree of risk – with a risk index from 71 to 100 inclusive;
- 2) the average degree of risk – with a risk index from 31 to 70 inclusive;
- 3) the low degree of risk – with a risk index from 0 to 30 inclusive.

At the same time, the data of subjective criteria previously taken into account and used in relation to a specific entity (object) of control or data for which the statute of limitations has expired in accordance with the Civil Code of the Republic of Kazakhstan are not applied in the analysis and assessment.

In respect of entities (objects) of control who have eliminated in full the violations issued based on the results of the previous preventive control with a visit and (or) verification of compliance with the requirements, it is not allowed to include them in the formation of schedules and lists for the next period of state control.

The priority of the sources of information used and the importance of indicators of subjective criteria are established in the criteria for assessing the degree of risk according to the list of subjective criteria for determining the degree of risk according to subjective criteria in the form according to the appendices 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18 and 19 to these Criteria.

Indicators of subjective criteria are determined for each homogeneous group of entities (objects) of control. The specific weight of the indicators of subjective criteria is determined depending on the importance of the indicator in risk assessment for each homogeneous group of entities (objects) of control. Acceptable values of indicators of subjective criteria are regulated by regulatory legal acts of the Republic of Kazakhstan.

13. The degrees of violations of requirements in the field of medical services (aid) are divided into gross, significant and insignificant.

The requirements for conducting compliance checks and preventive control of the entities (objects) of control with a visit to the entity (object) of control with a classification according to the degree of significance of violations and sources of information are given in appendices 1 and 2 to these Criteria. Non-compliance with the requirement determines the appropriate degree of violations.

14. Entities (objects) of control are exempt from inspections for compliance with the requirements and preventive control of entities (objects) of control for the next calendar year

if the entity (object) of control has conducted an external comprehensive assessment (accreditation) for compliance with accreditation standards and provided an accreditation certificate for the period under review.

15. Verification of compliance with the requirements and preventive monitoring with visits to the entity (object) are carried out depending on the purpose and types of activities of the facilities, in accordance with the checklists in the field of providing medical services (aid) to the population according to the appendices 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 22, 23, 24, 26 and 27 to this joint order.

16. Entities (objects) of control with a high degree of risk are transferred using an information system to a medium degree of risk or with a medium degree of risk to a low degree of risk in the relevant fields of activity of entities (objects) of control if there are cases of exemption from preventive control with a visit to the entity (object) of control or compliance checks in the laws of the Republic of Kazakhstan and criteria for assessing the degree of risk of regulatory state bodies.

17. When the control body draws up a schedule of inspections for compliance with the requirements and semi-annual lists of preventive control with visits to the entity (object) of control in respect of the same entities (objects) of control, uniform deadlines for the period of their conduct are established.

18. For entities (objects) of control classified as high-risk, the frequency of compliance checks is determined by the criteria for assessing the degree of risk, but not more than once a year.

For entities (objects) of control classified as medium risk, the frequency of compliance checks for compliance with requirements is determined by the criteria for assessing the degree of risk, but not more than once every two years.

For entities (objects) of control classified as low-risk, the frequency of inspections for compliance with requirements is determined by the criteria for assessing the degree of risk, but not more than once every three years.

#### **Chapter 4. The procedure for calculating the degree of risk according to subjective criteria**

19. In order to classify the entity (object) of control as a risk in accordance with paragraph 3 of these Criteria, the following procedure for calculating the risk indicator is applied.

20. The calculation of the risk index according to subjective criteria (R) is carried out in an automated mode by summing the risk index for violations based on the results of previous inspections and preventive control with visits to the entities (objects) (SP) of control and the risk index according to subjective criteria, followed by normalization of values given in the range from 0 to 100 scores.

$$R_{\text{проп}} = SP + SC, \text{ where}$$

$R_{\text{проп}}$  is an intermediate indicator of the degree of risk according to subjective criteria,

SP is an indicator of the degree of risk for violations,

SC is an indicator of the degree of risk according to subjective criteria.

The calculation is performed for each entity (object) of control of a homogeneous group of entities (objects) of control of each area of state control. At the same time, the list of assessed entities (objects) of control, attributed to a homogeneous group of entities (objects) of control of the same area of state control, forms a sample for subsequent normalization of data.

21. According to the data obtained from the results of previous inspections and preventive control with visits to the entities (objects) of control, an indicator of the degree of risk for violations is formed, estimated in scores from 0 to 100.

If one gross violation is detected by any of the sources of information specified in paragraphs 10 and 11 of these Criteria, the entity (object) of control is equated with a violation risk index (SP) of 100 scores and a compliance check and (or) preventive control with a visit to the entity (object) of control are carried out.

If no gross violations are detected, the risk index for violations is calculated as a total indicator for violations of significant and minor degrees.

When determining the indicator of significant violations, a coefficient of 0.7 is applied.

This indicator is calculated using the following formula:

$SP_3 = (SP_2 \times 100 / SP_1) \times 0.7$ , where:

$SP_3$  is an indicator of significant violations;

$SP_1$  – the required number of significant violations;

$SP_2$  – the number of significant violations detected;

When determining the indicator of minor violations, a coefficient of 0.3 is applied.

This indicator is calculated using the following formula:

$SP_H = (SP_2 \times 100 / SP_1) \times 0.3$ , where:

$SP_H$  is an indicator of minor violations;

$SP_1$  – the required number of minor violations;

$SP_2$  – the number of minor violations detected;

The violation risk index (SP) is calculated on a scale from 0 to 100 scores and is determined by summing the indicators of significant and minor violations according to the following formula:

$SP = SP_3 + SP_H$ , where:

SP is the indicator of the degree of risk for violations;

$SP_3$  is an indicator of significant violations;

$SP_H$  is an indicator of minor violations.

The obtained value of the indicator of the degree of risk for violations is included in the calculation of the indicator of the degree of risk according to subjective criteria.

22. The risk index is calculated according to subjective criteria on a scale from 0 to 100 scores and is carried out according to the following formula:

$$SC = \sum_{i=1}^n x_i * w_i, \text{ где}$$

Where,

$x_i$  is an indicator of the subjective criterion,

$w_i$  is the specific weight of the indicator of the subjective criterion  $x_i$ ,

$n$  is the number of indicators.

The obtained value of the indicator of the degree of risk according to subjective criteria is included in the calculation of the indicator of the degree of risk according to subjective criteria.

If violations of the indicators of the subjective risk criterion are detected, which provides for automatic inclusion in the schedule of compliance checks and (or) the list of preventive control with a visit, the final risk indicator (R) of 100 scores is equated to the entity (object) of control and a compliance check and (or) preventive control with a visit to the entity (object) of control is carried out in respect of it.

23. The values calculated for entities (objects) according to the R indicator are normalized in the range from 0 to 100 scores. Data normalization is performed for each sample (sample) using the following formula:

$$R = \frac{R_{\text{пром}} - R_{\text{min}}}{R_{\text{max}} - R_{\text{min}}},$$

R is an indicator of the degree of risk (final) according to the subjective criteria of an individual entity (object) of control.

$R_{\text{max}}$  is the maximum possible value on the scale of the degree of risk according to subjective criteria for entities (objects) included in the same sample (upper limit of the scale),

$R_{\text{min}}$  is the minimum possible value on the scale of the degree of risk according to subjective criteria for entities (objects) included in one sample (the lower limit of the scale),

$R_{\text{пром}}$  is an intermediate indicator of the degree of risk according to subjective criteria, calculated in accordance with paragraph 20 of these Criteria.

24. The regulatory state body in the field of medical services (aid) provides, by May 1 of the current calendar year and by October 20 preceding the year of preventive control with a

visit to the entity (object) of control, filling the information system with the necessary data intended for the formation of semi-annual lists of preventive control with a visit to the entity (object) of control and schedule for compliance with requirements in automatic mode.

Annex 1  
to the Risk assessment criteria  
in the sphere of provision  
of medical service (assistance)

### **Degrees of violations of the requirements for compliance inspection of the subjects (objects) of control**

| Item № | Name of requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Degree of violations |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| 1      | Availability of a specialist certificate for admission to clinical practice                                                                                                                                                                                                                                                                                                                                                                                                                 | gross                |
| 2      | Availability of a license and (or) an annex to the license                                                                                                                                                                                                                                                                                                                                                                                                                                  | gross                |
| 3      | Compliance of the premises or building on the right of ownership or lease agreement, or contract of gratuitous use of immovable property (loan), or trust management of property, or public-private partnership agreement with the standards of organization of medical care of specialized services for the provided subspecialties of medical activity, as well as the corresponding sanitary rules establishing sanitary and epidemiological requirements for the objects of health care | gross                |
| 4      | Availability of functioning medical and (or) special equipment, apparatus and instruments, devices, furniture, inventory, transport and other means (if necessary), approved in the standards of organization of medical care of profile services for the provided subspecialties of medical activity and minimum standards of equipment of health care organizations with medical products                                                                                                 | gross                |
| 5      | Availability of specialists for the provided types of activities                                                                                                                                                                                                                                                                                                                                                                                                                            | gross                |
| 6      | Availability of specialization or improvement and other types of advanced training for the last 5 (five) years on the provided subtypes of medical activity (except for the graduates of internship, residency, secondary educational institution                                                                                                                                                                                                                                           | gross                |

who have completed their training not later than 5 (five) years at the time of inspection).

Annex 2  
to the Risk assessment criteria  
in the sphere of provision  
of medical service (assistance)

## Degrees of violations of requirements for preventive control of the subjects (objects) of control

| Item №                                                                                                                  | Name of requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Degree of violations |

childbirth shall be issued by a medical worker (obstetrician-gynecologist), or in his/her absence, by a physician, in conjunction with the head of the department, after the conclusion of the medical consultative board from thirty weeks of pregnancy for a period of one hundred twenty-six calendar days (seventy calendar days before delivery and fifty-six calendar days after delivery) in case of normal childbirth.

For women residing in territories affected by nuclear tests, a sick leave certificate or certificate of disability for pregnancy and childbirth is issued from twenty-seven weeks of pregnancy and childbirth for one hundred and seventy calendar days (ninety-one calendar days before childbirth and seventy-nine calendar days after childbirth) in case of normal childbirth;

2) for women who have temporarily left their permanent place of residence within the Republic of Kazakhstan, a sheet or certificate of temporary incapacity for pregnancy and childbirth is issued (extended) in the medical organization where the birth occurred or in the women's consultation (office) at the place of observation according to the discharge (exchange card) of the obstetric organization

3) in case of complicated childbirth, birth of two or more children, the sheet or certificate of temporary incapacity for work is extended for an additional fourteen calendar days by a medical worker (obstetrician-gynecologist), or in his/her absence - by a doctor, together with the head of the department, after the conclusion of the medical consultative board at the place of observation according to the discharge of the obstetric health care organization. In such cases, the total duration of prenatal and postnatal leave shall be one hundred and forty

calendar days (seventy calendar days before delivery and seventy calendar days after delivery).

For women residing in territories affected by nuclear tests, in case of complicated childbirth or the birth of two or more children, the sick leave certificate or certificate of temporary incapacity is extended for an additional fourteen calendar days; the total duration of prenatal and postnatal leave shall be one hundred and eighty-four days (ninety-one calendar days before childbirth and ninety-three calendar days after childbirth);

4) In the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, the woman shall be issued a certificate of incapacity for work for seventy calendar days after childbirth.

In the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a dead fetus or a child with a body weight of five hundred grams or more, who died before seven days of life, the woman shall be issued a sick leave certificate or certificate of temporary incapacity for work for fifty-six calendar days after childbirth;

5) For women living in territories affected by nuclear tests, in the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, a certificate of temporary incapacity shall be issued for ninety-three calendar days after childbirth.

For women living in territories affected by nuclear tests, in the case of childbirth at twenty-two to twenty-nine weeks of pregnancy and the birth of a dead fetus or a child with a body weight of five hundred grams or more who died before seven days of life, a certificate of

significant

temporary incapacity shall be issued for seventy-nine calendar days after childbirth;

6) When a woman applies for a temporary incapacity certificate during pregnancy, the pregnancy and maternity leave is calculated cumulatively and granted in full regardless of the number of days actually used by her before childbirth.

If a woman applies for a temporary incapacity certificate after childbirth, only the leave after childbirth shall be granted for the duration provided for in this paragraph;

7) in case of pregnancy during the period when a woman is on paid annual labor leave or unpaid leave to care for a child up to the age of three , a temporary incapacity certificate shall be issued for all days of the pregnancy and maternity leave, except as provided for in part two of subparagraph 6) of this paragraph;

8) If the mother dies during childbirth or in the postpartum period, a sick leave certificate or certificate of temporary incapacity shall be issued to the person caring for the newborn child;

9) in the case of an operation for artificial termination of pregnancy, a sick leave certificate or certificate of temporary incapacity for work shall be issued by a doctor in conjunction with the head of the department for the period of stay in the hospital and outpatient clinic where the operation was performed, and in the case of a complication - for the entire period of temporary incapacity for work.

In case of spontaneous abortion ( miscarriage), a sick leave certificate or certificate of temporary incapacity for work shall be issued for the entire period of temporary incapacity for work;

10) In case of embryo transfer surgery, a sick leave certificate or certificate of temporary incapacity for work is issued by the medical organization that performed the surgery from the day of embryo

|    | <p>Availability of documentation on compliance with the following when performing post-mortem examination:</p> <ol style="list-style-type: none"> <li>1) conducting a post-mortem examination of corpses after physicians have ascertained biological death, after providing the medical card of an inpatient or the medical card of an outpatient with a written order from the chief physician or his/her deputy for the medical (treatment) part of the health care organization to send for a post-mortem examination;</li> <li>2) transfer of the medical card of an inpatient or medical card of an outpatient with the pathoanatomical diagnosis entered into it to the medical archive of the health care organization no later than ten working days after the post-mortem examination;</li> <li>3) conducting clinical and pathoanatomical analysis in cases of patient deaths in health care organizations;</li> <li>4) organization by the chief physician and head of the pathoanatomical department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;</li> </ol> |       |

5) Transfer of medical cards of hospital patients for all deceased patients for the previous day no later than 10 a.m. of the day following the establishment of the fact of death to pathoanatomical bureaus, centralized pathoanatomical departments and pathoanatomical departments

6) registration of post-mortem examination results in the form of pathoanatomical diagnosis ( pathology diagnosis includes: main disease, complication of the main disease, concomitant disease, combined main disease);

7) registration of: - medical certificate of death (preliminary, final) by a doctor specializing in " pathological anatomy (adult, pediatric)" on the day of post-mortem examination;

- medical certificate of perinatal death (preliminary, final) by a doctor specializing in "pathological anatomy (adult, pediatric)" on the day of post-mortem examination;

8) registration of the autopsy results in the form of a post-mortem examination report;

gross

9) written notification to the judicial and investigative authorities to address the issue of transferring the corpse for forensic medical examination if signs of death through violence are detected, and termination of post-mortem examination of the corpse;

10) availability of written notification of the doctor specializing in "pathological anatomy (adult, pediatric)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service, immediately after their detection;

11) conducting a post-mortem examination of the placenta:

- In all neonatal diseases detected at the time of birth;

- in cases suspected of hemolytic disease of the newborn;

- in cases of early discharge and dirty waters;
- in cases of maternal illness with high fever in the last trimester of pregnancy;
- in case of obvious anomalies in the development or attachment of the placenta;
- suspected congenital anomalies of the fetus;
- in cases of pre-eclampsia, eclampsia

12) mandatory registration of a fetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

13) establishment of post-mortem examination, depending on the complexity, into the following categories:

- first category;
- second category;
- third category;
- fourth category;

14) establishment of the category of post-mortem examination by a doctor specializing in "pathological anatomy (adult, pediatric)" and the reason for the divergence of diagnoses when the final clinical and pathoanatomical diagnoses diverge;

15) availability of detailed analysis with determination of the profile and categories of iatrogenesis in all cases of iatrogenic pathology identified as a result of post-mortem examination

Availability of supporting documentation on compliance with the following requirements in the organization of obstetric and gynecological care at the outpatient and polyclinic level:

- 1) ensuring early registration of pregnant women, on the day of their application to a medical organization, without taking into account the insured status;
- 2) Home health care for pregnant women, maternity women, gynecological patients and the group of women of fertile age (hereinafter referred to as the WFA) of social

risk, universal (compulsory) patronage observation of pregnant women up to 12 weeks and 32 weeks of pregnancy

3) dispensary observation of pregnant women for the prevention and early detection of complications of pregnancy, childbirth and the postpartum period, with the selection of women "according to risk factors"

;

4) conducting prenatal screening, a comprehensive examination of pregnant women to identify the risk group for chromosomal abnormalities and congenital malformations of the intrauterine fetus;

5) Identifying pregnant women in need of timely hospitalization in day hospitals, pregnancy pathology departments of inpatient medical organizations providing obstetric and gynecological care, specialized medical organizations with extragenital pathology, in compliance with the principles of regionalization of perinatal care;

6) referring pregnant women, women in labor and maternity for specialized assistance with medical supervision, including the use of high-tech medical services to medical organizations of the republican level;

7) conducting prenatal education for pregnant women in preparation for childbirth, including partner births, informing pregnant women about warning signs, effective perinatal technologies, principles of safe motherhood, breastfeeding and perinatal care;

8) nursing of the pregnant women and maternity women as indicated;

9) consulting and providing services on family planning and reproductive health issues;

10) prevention and detection of sexually transmitted infections for referral to specialized professionals;

11) screening of women of fertile age with the appointment, if necessary, of in-depth examinations

Availability of supporting documentation on the use of donor sperm in assisted reproductive methods and technologies (hereinafter referred to as ARMT)). Sexual abstinence for 3-5 days is required before semen donation. Semen is obtained by masturbation. The ejaculate is collected in a special sterile, pre-labeled container. This procedure is carried out in a special room with a separate entrance, appropriate interior, sanitary unit with a washbasin. In the absence of donor sperm in the medical organization, or at the patient's request, donor sperm from other organizations that have a donor sperm bank is used.

Only cryopreserved donor sperm is used after repeated (6 months after cryopreservation) negative test results for HIV, syphilis and hepatitis B and C are obtained.

The use of cryopreserved (frozen-thawed) sperm ensures:

significant

- 1) carrying out measures to prevent the transmission of HIV, syphilis, hepatitis and other sexually transmitted infections;
- 2) eliminating the possibility of meeting between the donor and the recipient.

Requirements for donor semen:

- 1) volume of ejaculate more than 1.5 milliliters (hereinafter - ml);
- 2) concentration of spermatozoa in 1 ml of ejaculate 15 million or more; total number of spermatozoa in the whole ejaculate 22.5 million or more ;
- 3) the proportion of progressively motile forms (A+B) 32% or more;
- 4) the proportion of morphologically normal forms 4% or more (according to strict Krueger criteria 14% or more);
- 5) cryotolerance;
- 6) test determining immunocompetent bodies of the sperm surface (MAR-test) - as indicated.

Attached Population" for the purpose of automated maintenance of groups of pregnant women and women of fertile age (hereinafter referred to as the WFAs) and monitoring of health indicators of pregnant women and WFAs;

3) providing emergency and emergency pre-hospital medical care to pregnant women, women in labor and delivery and women of fertile age for conditions threatening the life and health of women according to clinical protocols of diagnosis and treatment;

4) dynamic monitoring of pregnant women with chronic diseases together with district physicians and specialized professionals;

5) fulfillment of prescriptions of an obstetrician-gynecologist;

6) management of physiologic pregnancy and patronage of pregnant and maternity women with timely provision of referrals and recommendations on clinical protocols of diagnostics and treatment;

7) home medical care of pregnant women, maternity women, gynecological patients and social risk groups of women with HIV;

8) preventive medical examination of women for early detection of pre-tumor and cancerous diseases of female genital organs and other localizations (skin, mammary glands );

9) Conducting medical nursing examinations of women of all age groups who have sought medical care;

10) participation in screening and preventive examinations to detect diseases

gross

Availability of supporting documentation on compliance with the following requirements when organizing obstetric and gynecological care at the inpatient level:

1) provision of inpatient consultative-diagnostic, therapeutic,

- preventive and rehabilitative care to pregnant women, women in labor and delivery, and newborns;
- 2) joint examination by the attending physician and the head of the department upon admission of pregnant women up to 36 weeks of pregnancy suffering from chronic diseases who require treatment in specialized departments of multidisciplinary hospitals, in order to assess the severity of the course of the disease, the course of pregnancy and treatment tactics.
  - 3) drawing up a plan for the management of pregnancy, childbirth and postpartum period, taking into account an individualized approach;
  - 4) management of pregnancy, labor and postpartum period according to clinical protocols of diagnostics and treatment, as well as according to the management plan;
  - 5) counseling of pregnant women, women in labor and delivery, monitoring of compliance with the level of medical care;
  - 6) carrying out rehabilitation measures for mothers and newborns, including care for premature newborns;
  - 7) consultations on the provision of medical care to pregnant women, women in labor, maternity and newborns using telecommunication systems;
  - 8) expert examination of temporary gross incapacity for work, issuance of certificates and certificates of temporary incapacity for work for maternity and gynecological patients ;
  - 9) provision of resuscitation care and intensive care to mothers and newborns, including those with low and extremely low body weight;
  - 10) providing medical and psychological assistance to women;
  - 11) notification of medical organizations of a higher level of regionalization of perinatal care and local public health authorities in case

| 54 | Availability of medical documentation on the use of opportunities for consultation with specialized national organizations, through telemedicine network in case of difficulty in verifying the diagnosis of the child, determining the tactics of management. If it is necessary to transfer the child to specialized republican organizations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | significant |
|    | <p>Availability of documentation ( internal orders, regulations, protocols, questionnaires, analytical briefs) of the clinical audit by Patient Support Services and internal expertise and its evaluation according to the following criteria:</p> <p>1) quality of history taking, which is assessed according to the following criteria:</p> <p>absence of history taking;</p> <p>completeness of history taking;</p> <p>the presence of data on past, chronic and hereditary diseases, hemotransfusions, drug tolerance, allergological status;</p> <p>development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor history taking;</p> <p>2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:</p> <p>absence of diagnostic measures;</p> <p>incorrect conclusion or lack of conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics;</p> <p>performance of diagnostic tests stipulated by clinical protocols;</p> |             |

conducting diagnostic tests with high , unjustified risk for the patient's health condition, justification of diagnostic tests not included in the clinical protocols;

conducting diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the tests performed (in case of planned hospitalization, the tests performed at the pre-hospital stage are also taken into account), which are evaluated according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with highlighted complications, comorbidities affecting the outcome are not recognized;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and ( or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical service (assistance) is assessed;

4) timeliness and quality of consultations with specialized professionals, which are evaluated according to the following criteria:

lack of consultation, which led to misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take into account the consultant's opinion when making a diagnosis partially affected the outcome of the disease;

the consultation was timely, the consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendations partially influenced the outcome of the disease;

the consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on assessment of objectivity of reasons for untimely consultation and impact of untimely diagnosis on subsequent stages of medical service (assistance) provision;

5) volume, quality and validity of treatment measures, which are assessed by the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of ineffective treatment measures without taking into account the peculiarities of the course of the disease, concomitant diseases and complications;

performance of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred are evaluated, including

significant

Availability of supporting documentation (form № 085/y “emergency medical team call card”, register of admissions and refusals to hospitalization, form № 001/y “medical card of an inpatient”), that the stay of the EMS team or EMS department when organizing primary health care in the emergency room of the hospital does not exceed 10 minutes (time for transferring the patient to the doctor of the emergency room) from the moment of its arrival in the hospital, except for the need for emergency medical care in emergency situations.

After transferring the EMS team or EMS department when organizing primary health care of the patient to the receiving department of the hospital, the nurse conducts distribution of incoming patients (triage according to triage system) into groups, based on the priority of emergency medical care provision.

Triage according to triage system (hereinafter referred to as the medical triage) shall be carried out in a continuous and continuous manner.

gross

At the end of the assessment, patients are color-coded into one of the triage categories by means of a special-colored tag or colored tape.

According to medical triage, there are 3 groups of patients:

first group (red zone) - patients whose condition poses an immediate threat to life or who have a high risk of deterioration and require emergency medical care;

second group (yellow zone) - patients whose condition poses a potential threat to health or may progress with the development of a situation requiring emergency medical care;

third group (green zone) - patients whose condition does not pose an immediate threat to life and health and does not require hospitalization

Presence of a record in the medical documentation on determination of

2) issuance of a temporary incapacity certificate and certificate of temporary incapacity on the day of discharge of persons under inpatient treatment (including day hospitals, rehabilitation centers) for the entire period of inpatient treatment;

3) closing the temporary incapacity certificate and certificate of temporary incapacity on the date of discharge from the hospital if the person's ability to work has been fully restored;

4) prolongation to persons who continue to be temporarily incapacitated for a period of time, taking into account the time required for his/her visit to a medical worker of a polyclinic or calling a medical worker at home (but not more than one calendar day). Persons who received treatment outside the region of residence, the time required to arrive at their place of permanent residence is taken into account (but not more than four calendar days);

5) issuance of a certificate of temporary incapacity for work in case of injuries sustained under the influence of alcohol or drugs, as well as in case of acute alcohol or drug intoxication, for the entire period of temporary incapacity for work;

6) issuance of a sheet and certificate of temporary incapacity for work to persons suffering from mental illness in case of untimely application to a medical organization for the past days by the conclusion of the medical advisory commission of a psychoneurological dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

7) issuance of a sick leave certificate and certificate of temporary incapacity to persons referred by court decision for forensic medical or forensic psychiatric examination and recognized as incapable of work from the day of admission to the examination;

|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) of the clinical audit conducted by the Patient Support Service and internal expertise and its evaluation according to the following criteria:</p> <p>1) quality of history taking, which is assessed by the following criteria:</p> <p>absence of history taking;</p> <p>completeness of history taking;</p> <p>the presence of data on past, chronic and hereditary diseases, hemotransfusions, tolerance of drugs , allergological status;</p> <p>development of complications due to tactical errors in the course of treatment and diagnostic measures due to poor quality of history taking;</p> <p>2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:</p> <p>absence of diagnostic measures;</p> <p>incorrect conclusion or lack of conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics;</p> <p>performance of diagnostic tests stipulated by clinical protocols;</p> <p>performance of diagnostic tests with high, unjustified risk for the patient's health condition, justification of diagnostic tests not included in clinical protocols;</p> <p>conducting diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment;</p> <p>3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the tests performed (in case of planned hospitalization, the tests performed at the pre-hospital stage are also taken into account), which are</p> |  |

evaluated according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the highlighted complications, comorbidities affecting the outcome are not recognized;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of the associated disease, rare complications and associated diseases) are reflected in the results of the examination. The assessment of the impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical service (assistance) shall be carried out;

4) timeliness and quality of consultations with specialized professionals, which are evaluated according to the following criteria:

lack of consultation, which led to misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take into account the consultant's opinion when making a diagnosis partially affected the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

significant

the consultant's opinion was wrong and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical service (assistance);

5) volume, quality and validity of treatment measures, which shall be assessed by the following criteria:

absence of treatment in the presence of indications

prescription of treatment in the absence of indications

prescription of ineffective treatment measures without taking into account the peculiarities of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy that led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred are evaluated, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

achievement of the expected clinical effect with compliance with the technology of medical service (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor history taking and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the peculiarities of the course of the disease, concomitant diseases, complications, prescription of drugs without proven clinical efficacy;

presence of polypragmasy, which caused the development of undesirable consequences;

8) quality of medical documentation, which is assessed by the availability, completeness and quality of records in primary medical documentation, intended for recording data on the state of health of patients, reflecting the nature, volume and quality of medical care provided

Availability of documentation on compliance with the following steps for post-mortem examinations:

1) Post-mortem examination of corpses after doctors have ascertained biological death, after the medical card of an inpatient or the medical card of an outpatient has been submitted with a written order from the chief physician or his deputy for the medical (treatment) part of the health care organization to send for a pathoanatomical autopsy;

2) registration of post-mortem examination results in the form of pathoanatomical diagnosis (pathoanatomical diagnosis includes: main disease, complication of the main disease, concomitant disease, combined main disease);

3) transfer of the medical card of an inpatient or medical card of an outpatient with the pathoanatomical diagnosis entered into it to the medical archive of the health care organization no later than ten working days after the post-mortem examination;

4) conducting clinical and pathoanatomical dissection in cases of death of patients in health care organizations;

5) pathoanatomical autopsy in cases of suspected acute infectious, oncological diseases, pathology of childhood, lethal outcome in connection with medical manipulations in order to establish the cause of death and clarify the diagnosis of the disease with fatal outcome;

6) organizing by the chief physician and the head of the pathoanatomical department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathoanatomical bureau, centralized pathoanatomical bureau and pathoanatomical department of medical records of inpatients for all deceased patients for the previous day not later than 10 a.m. of the day following the establishment of the fact of death;

8) registration of:

- medical certificate of death (preliminary, final) by a doctor in the specialty of "pathological anatomy (adult, pediatric)" on the day of post-mortem examination;

- medical certificate of perinatal death (preliminary, final) by a doctor in the specialty of "pathological anatomy (adult, pediatric)" on the day of the post-mortem examination;

9) registration of the autopsy results in the form of a post-mortem examination report;

10) written notification to the forensic investigative authorities to resolve the issue of transferring the corpse for forensic medical examination in case of detection of signs of death through violence and termination of post-mortem examination of the corpse;

11) availability of a written notification of a doctor specializing in "pathological anatomy (adult, pediatric)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency

gross

|  | and a certificate of temporary incapacity for work to a person who combines training with work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
|  | <p>Compliance with the following requirements when issuing a sick leave certificate and certificate of temporary incapacity for work for maternity:</p> <p>- a sick leave certificate or certificate of temporary incapacity for work for pregnancy and childbirth is issued by a medical worker (obstetrician-gynecologist) or, in his/her absence, by a physician, together with the head of the department after the conclusion of the medical advisory board from thirty weeks of pregnancy for a period of one hundred and twenty-six calendar days (seventy calendar days before childbirth and fifty-six calendar days after childbirth) in the case of normal labor.</p> <p>Women living in territories affected by nuclear tests shall be issued a sick leave certificate or certificate of incapacity for maternity work from twenty-seven weeks of pregnancy and childbirth for one hundred and seventy calendar days (ninety-one calendar days before childbirth and seventy-nine calendar days after childbirth) in the case of normal childbirth;</p> <p>2) women who have temporarily left their permanent place of residence within the Republic of Kazakhstan, a sick leave certificate or certificate of temporary incapacity for work for pregnancy and childbirth shall be issued (prolonged) in the medical organization where the birth took place or in the women's consultation (office) at the place of observation according to the discharge (exchange card) of the obstetric organization</p> <p>3) in case of complicated childbirth, birth of two or more children, a sick leave certificate or certificate of temporary incapacity for work is extended for an additional fourteen calendar days by a medical worker (obstetrician-gynecologist), or in his/her absence - by a doctor, together</p> |  |

with the head of the department, after the conclusion of the medical consultative board at the place of observation according to the discharge of the obstetric health care organization. In such cases, the total duration of prenatal and postnatal leave shall be one hundred and forty calendar days (seventy calendar days before delivery and seventy calendar days after delivery).

Women living in the territories affected by nuclear tests, in case of complicated childbirth, birth of two or more children, a sick leave certificate or certificate of temporary incapacity for work is extended for an additional fourteen calendar days, the total duration of prenatal and postnatal leave shall be one hundred and eighty-four days (ninety-one calendar days before childbirth and ninety-three calendar days after childbirth);

4) In the case of births between twenty-two and twenty-nine weeks of pregnancy and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, the woman shall be issued a sick leave certificate or certificate of incapacity for work for seventy calendar days after the birth.

In the case of births between twenty-two and twenty-nine weeks of pregnancy and the birth of a dead fetus or a child with a body weight of five hundred grams or more, who died before seven days of life, the woman shall be issued a sick leave certificate or certificate of temporary incapacity for work for fifty-six calendar days after childbirth;

5) women living in the territories affected by nuclear testing, in the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, a sick leave certificate or certificate of temporary incapacity for work shall be issued

for ninety-three calendar days after childbirth.

Women living in the territories affected by nuclear tests, in the case of childbirth at twenty-two to twenty-nine weeks of pregnancy and the birth of a dead fetus or a child with a body weight of five hundred grams or more who died before seven days of life, a sick leave certificate or certificate of temporary incapacity for work shall be issued for seventy-nine calendar days after childbirth;

6) When a woman applies for a certificate of temporary incapacity for work during pregnancy, maternity leave is calculated cumulatively and is granted in full regardless of the number of days actually used before childbirth.

If a woman applies for a certificate of temporary incapacity for work after childbirth, only the leave after childbirth is granted for the duration provided for in this paragraph;

7) in case of pregnancy during the period when a woman is on paid annual labor leave or unpaid leave to care for a child up to the age of three , a certificate of temporary incapacity for work shall be issued for all days of maternity leave, except as provided for in part two of subparagraph 6) of this paragraph;

8) in case of death of the mother during childbirth or in the postpartum period, a sick leave certificate or certificate of temporary incapacity for work shall be issued to the person caring for the newborn;

9) in case of an operation for artificial termination of pregnancy, a sick leave certificate or certificate of temporary incapacity for work shall be issued by a doctor together with the head of the department for the period of stay in the hospital and outpatient department where the operation was performed, and in case of a complication - for the entire period of temporary incapacity for work.

In case of spontaneous abortion (miscarriage), a sick leave certificate or certificate of temporary incapacity for work shall be issued for the entire period of temporary incapacity for work;

10) in case of embryo transfer surgery, a sick leave certificate or certificate of temporary incapacity for work shall be issued by the medical organization that performed the surgery, from the day of embryo transfer until the pregnancy is established.

Persons who have adopted a newborn child (children), as well as the biological mother in the case of surrogacy directly from the maternity hospital a sick leave certificate or certificate of temporary incapacity for work shall be issued from the date of adoption and until the expiration of fifty-six calendar days from the date of birth of the child

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical briefs) of the clinical audit by Patient Support Services and internal expertise and its evaluation according to the following criteria:

1) quality of history taking, which is assessed according to the following criteria:

absence of history taking;

completeness of history taking;

presence of data on past, chronic and hereditary diseases, hemotransfusions, drug tolerance, allergological status;

development of complications as a result of tactical errors made in the course of treatment and diagnostic measures due to poor history taking;

2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:

absence of diagnostic measures;

incorrect conclusion or absence of a conclusion based on the results of

diagnostic tests, resulting in incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

performance of diagnostic tests with high, unjustified risk for the patient's health condition, justification of diagnostic tests not included in clinical protocols;

diagnostic tests that are uninformative for making a correct diagnosis and resulted in unjustified increase of treatment time and cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalization, the investigations conducted at the pre-hospital stage shall be taken into account), which shall be assessed according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome is not distinguished with the distinguished complications, comorbidities affecting the outcome are not recognized;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of

incorrect and (or) untimely diagnosis on the subsequent stages of medical service (assistance) is assessed;

4) timeliness and quality of consultations with specialized professionals, which are evaluated according to the following criteria:

lack of consultation, which led to misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take into account the consultant's opinion when making a diagnosis partially affected the outcome of the disease;

the consultation was timely, the consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendations partially influenced the outcome of the disease;

the consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on assessment of objectivity of reasons for untimely consultation and impact of untimely diagnosis on subsequent stages of medical service (assistance);

5) volume, quality and validity of treatment measures, which are assessed by the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of ineffective treatment measures without taking into account the peculiarities of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new

urgent medical care”, “General medical practice (family medicine)” when a patient comes to a health care organization providing primary health care with complaints and symptoms of surgical nature, referrals for patient consultation to specialized professionals.

2) whether indications for surgery, assessment of the scope of surgical intervention, type of anesthesia, risks of intra- and postoperative complications, obtaining the patient's written consent for the operation have been determined in the case of surgical treatment at the outpatient and polyclinic level (in CDP organizations and inpatient substitute care).

3) Whether a specialized professional of the outpatient clinic monitors the condition of patients discharged from the hospital in the postoperative period.

4) In the case of long-term treatment of patients after surgical intervention , a specialized professional should consult with doctors of medical control commissions and, based on their conclusions, refer patients to medical and social assessment ( hereinafter referred to as the MSA) in order to conduct an initial examination and (or) re-evaluation ( re-evaluation) to determine temporary (up to 1 year) and permanent disability) gross

5) Compliance with the requirement for a profile specialist of a polyclinic (number district, district, city), clinical and diagnostic department/ center in case of suspicion and (or) establishment of the diagnosis of acute surgical pathology to ensure the call and transportation of the patient by an ambulance brigade to a hospital with round-the-clock medical supervision, providing urgent surgical care; in case of unstable hemodynamics and life-threatening condition of the patient - to the nearest hospital

infection upon detection of the following diseases, syndromes and symptoms:

- 1) enlargement of two or more lymph nodes with duration of more than 1 month, persistent, generalized lymphadenopathy;
- 2) fever of unclear etiology (persistent or recurrent for a duration of more than 1 month);
- 3) unexplained severe cachexia or severe nutritional disorders that do not respond well to standard treatment (in children), unexplained loss of 10% of weight or more;
- 4) chronic diarrhea for 14 days or more (in children), unexplained chronic diarrhea lasting more than a month;
- 5) seborrheic dermatitis, pruritic papular rash (in children);
- 6) angular cheilitis;
- 7) recurrent upper respiratory tract infections (sinusitis, otitis media, pharyngitis, tracheitis, bronchitis);
- 8) zona ignea;
- 9) any disseminated endemic mycosis, deep mycoses (coccidioidosis, extrapulmonary cryptococcosis (cryptococcal meningitis), sporotrichosis, aspergillosis, isosporosis, extrapulmonary histoplasmosis, strongyloidiasis, actinomycosis);
- 10) pulmonary and extrapulmonary tuberculosis, including disseminated infection caused by atypical mycobacteria, except for tuberculosis of peripheral lymph nodes;
- 11) hairy leukoplakia of the oral cavity, linear erythema of the gums;
- 12) severe prolonged recurrent pneumonia and chronic bronchitis not amenable to conventional therapy (two or more times during the year), asymptomatic and clinically expressed lymphoid interstitial pneumonia;
- 13) sepsis, prolonged and recurrent purulent and bacterial diseases of internal organs (pneumonia, pleural empyema, meningitis,

meningoencephalitis, bone and joint infections, purulent myositis, Salmonella septicemia (except Salmonella typhi), stomatitis, gingivitis, periodontitis);

14) pneumocystis pneumonia;

15) infections caused by herpes simplex virus, with damage to internal organs and chronic (lasting more than one month from the moment of the disease) lesions of the skin and mucous membranes, including eyes;

16) cardiomyopathy;

17) nephropathy;

18) encephalopathy of unclear etiology;

19) progressive multifocal leukoencephalopathy;

20) Kaposi's sarcoma;

21) neoplasms, including lymphoma (brain) or B-cell lymphoma;

22) toxoplasmosis of the central nervous system;

23) candidiasis of the esophagus, bronchi, trachea, lungs, mucous membranes of the oral cavity and nose;

24) disseminated infection caused by atypical mycobacteria;

25) cachexia of unclear etiology;

26) protracted recurrent pyoderma, not amenable to conventional therapy;

27) severe chronic inflammatory diseases of the female genitalia of unclear etiology;

28) invasive neoplasms of the female genital organs;

29) mononucleosis after 3 months from the onset of the disease;

30) sexually transmitted infections (syphilis, chlamydia, trichomoniasis, gonorrhea, genital herpes, viral papillomatosis and others) with an established diagnosis;

31) viral hepatitis B and C, with confirmed diagnosis;

32) extensive plumose condylomas;

33) molluscum contagiosum with extensive rashes, giant disfiguring molluscum contagiosum;

- 2) determination of the method of anesthesia, implementation of medical preoperative preparation and implementation of different methods of anesthesia for various surgical interventions, childbirth, diagnostic and therapeutic procedures;
- 3) monitoring of patients' condition in the postanesthetic period in the post anesthesia care units until recovery of consciousness and stabilization of the function of vital organs;
- 4) assessment of the degree of dysfunction of vital organs and systems and implementation of an expanded set of resuscitation and intensive care measures in various critical situations, including methods of extracorporeal detoxification, hyperbaric oxygenation, electrocardiostimulation;
- 5) intensive monitoring (express control of the state of life support systems, as well as metabolism with the use of laboratory and functional diagnostics methods, respiratory and circulatory monitoring), full and targeted correction of disorders;
- 6) carrying out resuscitation measures to patients (if indicated) in other departments;
- 7) determination of indications for further treatment of patients in the Anesthesiology, resuscitation and intensive treatment department, as well as transfer of patients from the Anesthesiology, resuscitation and intensive treatment department to specialized departments after stabilization of the function of vital organs with recommendations for treatment and examination for the next 24 hours;
- 8) consulting doctors of other departments on issues of practical anesthesiology and resuscitation;
- 9) analyze the efficiency of the department and the quality of medical care, develop and implement measures to improve the quality of medical care and reduce the mortality rate

significant

Compliance with the following actions when conducting post-mortem examination:

- 1) conducting post-mortem examination of corpses after the doctors have ascertained biological death, after providing the medical card of an inpatient or medical card of an outpatient with a written order from the chief physician or his deputy for the medical (treatment) part of the health care organization to send for pathoanatomical autopsy;
- 2) registration of post-mortem examination results in the form of pathoanatomical diagnosis (pathoanatomical diagnosis includes: main disease, complication of the main disease, concomitant disease, combined main disease);
- 3) transfer of the medical card of an inpatient or medical card of an outpatient with the pathoanatomical diagnosis entered into it to the medical archive of the health care organization no later than ten working days after the post-mortem examination;
- 4) conducting clinical and pathoanatomical analysis in cases of death of patients in health care organizations;
- 5) post-mortem examination in cases of suspected acute infectious, oncologic diseases, pediatric pathology, lethal outcome due to medical manipulations in order to establish the cause of death and clarify the diagnosis of a fatal disease;
- 6) organization by the chief physician and head of the pathoanatomical department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;
- 7) transfer to the pathoanatomical bureau, centralized pathoanatomical bureau and pathoanatomical department of medical records of inpatients for all deceased patients

for the previous day not later than 10 a.m. of the day following the establishment of the fact of death;

8) registration of:

- medical certificate of death (preliminary, final) by a doctor specializing in “pathological anatomy (adult, pediatric)” on the day of post-mortem examination;
- medical certificate of perinatal death (preliminary, final) by a doctor specializing in “pathological anatomy (adult, pediatric)” on the day of post-mortem examination;

9) registration of the autopsy results in the form of a post-mortem examination report;

10) written notification to the forensic investigative authorities to address the issue of transferring the corpse for forensic medical examination in case of detection of signs of death through violence and termination of post-mortem examination of the corpse;

11) written notification to the doctor specializing in “pathological anatomy (adult, pediatric)” in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service, immediately after their detection;

12) performing a post-mortem examination of the placenta:

- In case of stillbirth;
- in all neonatal diseases detected at the time of birth;
- in cases suspected of hemolytic disease of the newborn;
- in cases of early departure of waters and dirty waters;
- in cases of maternal illness with fever in the last trimester of pregnancy;
- in case of obvious anomalies in the development or attachment of the placenta;
- suspected congenital anomalies of the fetus;
- cases of pre-eclampsia, eclampsia

|     | <p>Availability of documentation ( internal orders, regulations, protocols, questionnaires, analytical briefs) of the clinical audit by Patient Support Services and internal expertise and its evaluation according to the following criteria:</p> <p>1) quality of history taking, which is assessed according to the following criteria:</p> <ul style="list-style-type: none"> <li>absence of history taking;</li> <li>completeness of history taking;</li> <li>availability of data on past, chronic and hereditary diseases, hemotransfusions, tolerance of medicines, allergological status;</li> <li>development of complications due to tactical errors made during treatment</li> </ul>                                                                                                                                                                                                  |             |

and diagnostic measures due to poor history taking;

2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:

absence of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

conducting diagnostic tests with high , unjustified risk for the patient's health condition, justification of diagnostic tests not included in the clinical protocols;

conducting diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalization, investigations conducted at the pre-hospital stage are taken into account), which are evaluated according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the highlighted complications, comorbidities affecting the outcome are not recognized;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical service (assistance) is assessed;

4) timeliness and quality of consultations of specialized professionals, which shall be assessed according to the following criteria:

significant

Lack of consultation, which led to misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take into account the consultant's opinion when making the diagnosis partially affected the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical service (assistance);

5) volume, quality and validity of treatment measures, which are assessed by the following criteria:

absence of treatment in the presence of indications

prescription of treatment in the absence of indications;

prescribing ineffective therapeutic measures without taking into account the peculiarities of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is assessed according to the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical service (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the peculiarities of the course of the disease, concomitant diseases, complications, prescription of drugs without proven clinical efficacy;

the presence of polypragmasy, which caused the development of undesirable consequences;

8) the quality of medical documentation, which is assessed by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature, volume and quality of medical care provided

The patient has been examined by a doctor in the emergency room of an

availability of data on past, chronic and hereditary diseases, hemotransfusions, drug tolerance, allergological status;

development of complications as a result of tactical errors made in the course of treatment and diagnostic measures due to poor anamnesis collection;

2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:

absence of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic tests stipulated by clinical protocols;

performance of diagnostic tests with high, unjustified risk for the patient's health condition, justification of diagnostic tests not included in clinical protocols;

conducting diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of tests (in case of planned hospitalization, tests performed at the pre-hospital stage are also taken into account), which are evaluated according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the

highlighted complications, comorbidities affecting the outcome are not recognized;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical service (assistance) is assessed;

4) timeliness and quality of consultations of specialized professionals, which are assessed according to the following criteria:

absence of consultation that led to erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take the consultant's opinion into account when making the diagnosis partially affected the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical service (assistance);

5) volume, quality and validity of treatment measures, which are assessed by the following criteria:

absence of treatment in the presence of indications;

significant

prescription of treatment in the absence of indications;

prescription of ineffective treatment measures without taking into account the peculiarities of the course of the disease, concomitant diseases and complications;

performance of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred are evaluated, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical service (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic, preventive measures without taking into account the specifics of the course of the disease, comorbidities, complications, prescription of drugs without proven clinical efficacy;

the presence of polypragmasy, which caused the development of undesirable consequences;

8) quality of medical documentation, which is assessed by the availability, completeness and quality of records in the primary medical

|  | <p>8) consulting doctors of other departments on issues of practical anesthesiology and resuscitation;</p> <p>9) analyzing the efficiency of the department and the quality of medical care, developing and implementing measures to improve the quality of medical care</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
|  | <p>Availability of documentation ( internal orders, regulations, protocols, questionnaires, analytical briefs) of the clinical audit by Patient Support Services and internal expertise and its evaluation according to the following criteria:</p> <p>1) quality of history taking, which is assessed according to the following criteria:</p> <p>absence of history taking;</p> <p>completeness of history taking;</p> <p>availability of data on past, chronic and hereditary diseases, hemotransfusions, drug tolerance, allergological status;</p> <p>development of complications as a result of tactical errors made in the course of treatment and diagnostic measures due to poor history taking;</p> <p>2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:</p> <p>absence of diagnostic measures;</p> <p>incorrect conclusion or lack of conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics.;</p> <p>conducting diagnostic tests stipulated by clinical protocols;</p> <p>performance of diagnostic tests with high, unjustified risk for the patient's health condition, justification of diagnostic tests not included in clinical protocols;</p> <p>conducting diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment;</p> <p>3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of tests (in case of planned</p> |  |

hospitalization, tests performed at the pre-hospital stage are also taken into account), which are evaluated according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the highlighted complications, comorbidities affecting the outcome are not recognized;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical service (assistance) is assessed;

4) timeliness and quality of consultations of specialized specialists, which are assessed according to the following criteria:

absence of consultation that led to erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take the consultant's opinion into account when making the diagnosis partially affected the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

significant

consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical service (assistance) provision;

5) volume, quality and validity of treatment measures, which are assessed by the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of ineffective treatment measures without taking into account the peculiarities of the course of the disease, concomitant diseases and complications;

performance of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred are evaluated, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical service (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |

| 204 | <p>of directly observed treatment rooms (hereinafter referred to as “DOT”) in primary health care facilities to provide outpatient treatment. The patient shall receive and takes medicine in the DOT room under the supervision of the responsible health care provider. Once every 10 days, patients on directly supervised treatment shall be examined by a primary care physician/phthisiologist of the outpatient clinic, more frequently if specified. Patients residing in rural areas shall be seen by a phthisiatrician once a month</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Major violation |
| 205 | <p>Evaluation of the clinical condition of a patient receiving anti-tuberculosis treatment for the presence of adverse reactions and events shall be made daily by the attending physician or phthisiatrician, a health care provider of the directly observed treatment room. A health care provider who has revealed adverse reactions and events to a medicinal product shall fill in a report card and make an entry in the patient's medical records. Primary data on adverse reactions and events shall be reported by the responsible person of the healthcare facility to the state expert organisation in the sphere of circulation of medicines and medical devices. The responsible person in charge of pharmacovigilance shall be in charge of the registration of report cards.</p> <p>Each case of adverse reactions and phenomena shall be discussed at a session of the centralised medical advisory committee to determine the cause-and-effect relationship with the medication taken.</p> | Gross violation |

Examination of persons on clinical indications for HIV infection when the following diseases, syndromes and symptoms are detected:

- 1) enlargement of two or more lymph nodes for more than 1-month, persistent, generalised lymphadenopathy;
- 2) fever of unclear aetiology (persistent or recurrent for more than 1 month);
- 3) unexplained severe cachexia or severe nutritional deficiencies that do not respond well to standard treatment (in children), unexplained loss of 10% of weight or more;
- 4) chronic diarrhoea for 14 days or more (in children), unexplained chronic diarrhoea lasting more than a month;
- 5) seborrhoeic dermatitis, pruritic papular rash (in children);
- 6) angular cheilitis;
- 7) recurrent upper respiratory tract infections (sinusitis, otitis media, pharyngitis, tracheitis, bronchitis);
- 8) shingles;
- 9) any disseminated endemic mycosis, deep mycoses (coccidioidosis, extrapulmonary cryptococcosis (cryptococcal meningitis), sporotrichosis, aspergillosis, isosporosis, extrapulmonary histoplasmosis, strongyloidosis, actinomycosis);
- 10) pulmonary and extrapulmonary tuberculosis, including disseminated infection caused by atypical mycobacteria, apart from tuberculosis of peripheral lymph nodes;
- 11) hairy leukoplakia of the oral cavity, linear gingival erythema;
- 12) severe prolonged recurrent pneumonia and chronic bronchitis not amenable to conventional therapy (two or more times during the year), asymptomatic and clinically expressed lymphoid interstitial pneumonia;
- 13) sepsis, prolonged and recurrent purulent and bacterial diseases of internal organs (pneumonia, pleural

empyema, meningitis, meningoencephalitis, bone and joint infections, purulent myositis, Salmonella septicaemia (excluding Salmonella typhi), stomatitis, gingivitis, periodontitis);  
 14) pneumocystis pneumonia;  
 15) infections caused by herpes simplex virus, with damage to internal organs and chronic (lasting more than one month from the moment of the disease) lesions of the skin and mucous membranes, including eyes;  
 16) cardiomyopathy;  
 17) nephropathy;  
 18) encephalopathy of unclear etiology;  
 19) progressive multifocal leukoencephalopathy;  
 20) Kaposi's sarcoma;  
 21) neoplasms, including lymphoma (brain) or B-cell lymphoma;  
 22) toxoplasmosis of the central nervous system;  
 23) candidiasis of the oesophagus, bronchi, trachea, lungs, oral and nasal mucous membranes;  
 24) disseminated infection caused by atypical mycobacteria;  
 25) cachexia of unclear etiology;  
 26) prolonged recurrent pyoderma not amenable to conventional therapy;  
 27) severe chronic inflammatory diseases of the female genital sphere of unclear etiology;  
 28) invasive neoplasms of the female genital organs;  
 29) mononucleosis after 3 months from the onset of the disease;  
 30) sexually transmitted infections (syphilis, chlamydia, trichomoniasis, gonorrhoea, genital herpes, viral papillomatosis and others) with a diagnosis established;  
 31) viral hepatitis B and C, with confirmed diagnosis;  
 32) extensive plumose condylomas;  
 33) molluscum contagiosum with extensive rashes, giant disfiguring molluscum contagiosum;

| 225 | <p>Presence of medical documentation on observance of the following requirements for the examination of temporary incapacity for work, issuance of temporary incapacity for work and certificates of temporary incapacity for work (Form № 001/y “Medical Record of Inpatient Patient”, Form 052/y “Medical Record of Outpatient Patient”, stubs of temporary incapacity for work sheets of patients, form № 025/y “Log for Recording of Reports of Medical Advisory Board”, form № 029/y “Book of Registration of Sheets on Temporary Disability”, form № 037/y “Certificate № _____ on Temporary Disability of a Student, College Student, Vocational School Student, on Illness, Quarantine and Other Reasons for the Absence of a Child Attending School, Pre-School Institution (underline as appropriate)”, form № 038/y “Certificate № _____ on Temporary Disability” and others):</p> <p>1) examination of the person and recording of data on his/her state of health in the medical record of an outpatient (inpatient) patient justifying the need for temporary release from work;</p> <p>2) issuance of a sheet and certificate of temporary incapacity for work on the day of discharge of persons under inpatient treatment (including day care centers, rehabilitation centers) for the entire period of inpatient treatment;</p> <p>3) closing of the sheet and certificate of temporary incapacity for work by the date of discharge from hospital if the persons' ability to work has been fully restored;</p> | Major violation |

4) prolongation to persons who continue to be temporarily incapacitated for a period of time, based on the time required for his/her visit to a health care provider at the outpatient clinic or home visit (but not more than one calendar day), the time required to arrive at their place of permanent residence is considered (but not more than four calendar days) for persons who have received treatment outside the region of residence;

5) issuance of a certificate of temporary disability for injuries sustained while under the influence of alcohol or drugs, as well as acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuance of a sheet and certificate of temporary incapacity for work to persons suffering from mental illness if they do not apply to a health care facility in a timely manner for the past days by the conclusion of the health-consulting commission of a psychoneurological dispensary or a medical worker (psychiatrist) in conjunction with the head of the health care facility;

7) issuance of a sheet and a certificate of temporary incapacity for work to persons referred by court ruling for forensic medical or forensic psychiatric examination and recognized as incapable of work from the day of admission to the examination;

8) issuance of a sheet and a certificate of temporary incapacity for work to a person who combines training with work.

Existence of documentation (internal orders, regulations, protocols, questionnaires, analytical briefs) of the clinical audit by Patient Support Services and internal expertise and its evaluation based on the following criteria:

1) quality of history taking, evaluated by the following criteria:  
absence of anamnesis collection;  
full history taking;

data on past, chronic and hereditary diseases, hemotransfusions, drug tolerance, allergic status;

development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor history taking;

2) completeness and validity of diagnostic tests, evaluated by the following criteria:

absence of diagnostic measures;

incorrect conclusion or absence of a conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

performance of diagnostic tests with high, unjustified risk for the patient's health condition, justification of diagnostic tests not included in the clinical protocols;

diagnostic tests that are uninformative for making a correct diagnosis and resulted in unjustified increase of treatment time and cost of treatment;

3) accuracy, promptness and validity of the clinical diagnosis, based on the findings of investigations (in case of planned hospitalization, investigations conducted at the pre-hospital stage are also considered), which are evaluated against the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome describing the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not distinguished with the highlighted complications, comorbidities affecting the outcome are not recognised;

the diagnosis of the main disease is correct, but comorbidities affecting

the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The effect of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated);

4) promptness and quality of consultations with profile specialists, which are evaluated by the following criteria:

lack of consultation, which led to misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to include the consultant's opinion in the diagnosis partially influenced the outcome of the disease;

the consultation is timely, the consultant's opinion is taken into consideration when making the diagnosis, failure to implement the consultant's treatment recommendations partially influenced the outcome of the disease;

the consultant's opinion was erroneous and affected the outcome of the disease.

Presence of supporting documentation on evaluation of objectivity of reasons for late consultation and impact of late diagnosis on subsequent stages of health services (care) provision);

5) volume, quality and validity of treatment measures, which are estimated based on the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of low-effective treatment measures without regard to the specifics of the course of the

Major violation

disease, concomitant diseases and complications;  
implementation of therapeutic measures not in full, without accounting for the functional state of organs and systems, prescription of drugs without proven clinical efficacy;  
необоснованное отклонение от требований клинических протоколов, наличие полипрагмазии, приведшее to the development of a new pathologic syndrome and worsening of the patient's condition;  
6) absence or development of complications after medical interventions, all complications that occurred, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;  
7) the achieved result, which is evaluated based on the following criteria:  
achievement of the expected clinical effect in compliance with the technology of health care services (assistance);  
lack of clinical effect of therapeutic and preventive measures due to poor history collection and diagnostic tests;  
absence of expected clinical effect due to inefficient therapeutic and preventive measures without regard to the peculiarities of the disease course, concomitant diseases, complications, prescription of drugs without proven clinical efficacy;  
presence of polypragmasy, which caused the development of undesirable consequences;  
8) quality of medical documentation, which is estimated by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the health status of patients, reflecting the nature, scope and quality of medical care provided.

Presence of documentation of adherence to the following when performing pathologic autopsies:

- 1) conducting a pathological anatomical autopsy of cadavers after physicians have ascertained biological death, upon submission of the medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his/her deputy for the medical (treatment ) part of the health care facility to send for a pathological anatomical autopsy;
- 2) registration of the findings of the pathologoanatomical autopsy in the form of a pathologoanatomical diagnosis (pathologoanatomical diagnosis includes: the main disease, complication of the main disease, concomitant disease, combined main disease);
- 3) transfer of the medical record of an inpatient patient or the medical record of an outpatient patient with the pathological anatomical diagnosis entered into it to the medical archive of the health care facility no later than ten working days after the pathological anatomical autopsy;
- 4) clinical and pathological anatomical examination in cases of death of patients in health care facilities;
- 5) pathologoanatomical autopsy in cases of suspected acute infectious, oncological diseases, pathology of childhood, lethal outcome due to medical manipulations in order to establish the cause of death and clarify the diagnosis of fatal disease;
- 6) arrangement by the chief physician and head of the pathology department of virological ( immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;
- 7) transfer to the pathology bureau, centralized pathology bureau and pathology department of medical records of inpatients for all deceased

patients for the previous day not later than 10 a.m. of the day following the establishment of the fact of death;

8) drawing up:

- a medical certificate of death (preliminary, final) by a doctor in the specialty of "athological anatomy (adult, pediatric)" on the day of the pathological anatomical autopsy;
- a medical certificate of perinatal death (preliminary, final) by a doctor in the specialty of "pathological anatomy (adult, pediatric)" on the day of the pathological anatomical autopsy;

9) processing the results of the autopsy in the form of a protocol of pathological anatomical examination ; 10) written notification to the forensic investigative agencies to address the issue of transferring the corpse for forensic medical examination in case of detection of signs of violent death and termination of the pathological anatomical examination of the corpse;

11) written notification of a medical doctor majoring in Pathological Anatomy (Adult, Paediatric)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the State Sanitary and Epidemiological Service, immediately after their detection;

12) performing pathological and anatomical examination of the placenta:

- in case of stillbirth;
- in all diseases of newborns diagnosed at the time of birth;
- in cases suspected of haemolytic disease of the newborn;
- in cases of early discharge and dirty waters;
- in cases of maternal illness with fever in the last trimester of pregnancy;

- 4) group IIa - patients with early forms of MN subject to radical treatment;
- 5) group III - patients after radical treatment of malignant tumour (almost healthy individuals);
- 6) group IV - patients with advanced forms of MN, subject to palliative or symptomatic treatment.

Following the findings of in-depth examination of a patient of clinical group Ia, primary care physicians remove the suspicion of MN or transfer the patient to the appropriate clinical groups:

- 1) if a pre-tumour disease is revealed, the patient is transferred to clinical group Ib;
- 2) if the diagnosis of MN is confirmed (verified), the patient is taken for dynamic follow-up in clinical group II;
- 3) patients with advanced forms of MN, not amenable to special treatment, are transferred to the IV clinical group.

Patients of clinical group Ib should be dynamically monitored and recuperated by PHC and CDC experts in institutions rendering medical care in outpatient conditions at the place of their attachment, performed on monitoring of groups of high cancer risk in health care facilities monitoring of groups of high cancer risk in health care facilities of primary health care and consultative-diagnostic care.

The II clinical group includes all primary patients with MN who are eligible for special treatment, regardless of the stage of the disease, including patients with stage 4 MN, if there are indications for special treatment.

Patients are transferred from the II clinical group to the III group after completion of the full course of special treatment, if there are diagnostically confirmed results of radical cure, as well as the absence of progression and relapse of MN.

Major violation

Medical dynamic monitoring of patients of clinical group III is performed:

- 1) during the first year of the disease - once every three months;
- 2) during the second year of the disease - once every six months;
- 3) from the third year - once a year.

Patients in clinical group II are followed up by secondary level experts in line with periodic clinical protocols, at least once every three months.

Patients from clinical group III are transferred to clinical group II in case of progression and relapse of MN.

The IV clinical group includes patients with advanced forms of MN, with aggravating concomitant pathology that does not allow special treatment, subject to palliative or symptomatic treatment.

Patients are transferred from clinical group II to group IV in case of disease progression on the background of treatment.

Patients in clinical group III are transferred from clinical group III to IV in case of disease progression over the period of dynamic observation and worsening of the condition that does not allow special treatment.

Patients of clinical group IV who need palliative and symptomatic treatment are observed in the primary health care facility at the place of registration. Patients of clinical group IV are not removed from the oncological register.

Patients with MN are subject to lifelong follow-up in an institution rendering medical care in outpatient conditions at the place of registration - primary level (III clinical group) and institutions rendering oncological care at the secondary level (II clinical group) at the place of residence and registration.

In case of change of place of residence and change of institution of registration within the country,

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                 |

2) conducting complex diagnostic tests that require special preliminary preparation and are not available in outpatient and polyclinic health care facilities;

3) monitoring of patients whose treatment involves transfusion of blood products, intravenous infusions of blood substitutes, specific hyposensitising therapy, injections of potent drugs, intra-articular injections of drugs;

4) treatment on the next day after inpatient treatment if there are evidences for early discharge after surgical treatment;

5) palliative care;

6) chemotherapy, radiation therapy, correction of pathological conditions arising after specialised treatment of oncological patients

Presence of medical documentation on observance of the following requirements during the examination of temporary incapacity for work, issuance of a sheet and a certificate of temporary incapacity for work ( form № 001/y “Medical Records of an Inpatient Patient”, form № 052/y “Medical Records of an Outpatient Patient”, stubs of certificates of temporary incapacity for work of patients, form № 025/y “Log for Recording Opinions of Medical Advisory Board”, form № 029/y “Book of Registration of Certificates of Temporary Incapacity for Work”, form № 037/y “Certificate № \_\_\_\_\_ on Temporary Disability of a Student, Pupil of a College, Vocational School, Sickness, Quarantine and Other Reasons for Absence of a Child Attending School, Preschool Institution ( underline as appropriate)”, form № 038/y “Certificate № \_\_\_\_\_ on Temporary Disability” and others.

1) presence of examination of the person and recording of data on his/her state of health in the medical record of an outpatient (inpatient) patient justifying the need for temporary release from work;

2) issuance of a temporary disability certificate on the day of discharge of persons under inpatient treatment (including day hospitals, rehabilitation centres) for the entire period of inpatient treatment;

3) closing the temporary disability certificate and certificate of temporary incapacity for work on the date of discharge from the hospital if the person's ability to work is fully restored;

4) prolongation to persons who continue to be temporarily incapacitated for a period of time a sheet and certificate of temporary incapacity for work, with due regard to the time required for his/her visit to a health worker of a polyclinic or a call of a health worker at home (but not more than one calendar day). Persons who received treatment outside the region of residence shall be considered for the time required to arrive at the place of his/her permanent residence (but not more than four calendar days);

5) issuance of a certificate of temporary incapacity for work for injuries sustained under the influence of alcohol or drugs, as well as for acute alcohol or drug intoxication, for the entire period of temporary incapacity for work;

6) issuance of a sheet and certificate of temporary incapacity for work to persons suffering from mental illnesses in the event of failure to apply to a healthcare facility in a timely manner for the past few days upon the conclusion of the medical advisory board of a psychoneurological dispensary or a medical officer (psychiatrist) jointly with the head of the healthcare facility;

7) issuance of a sheet and a certificate of temporary incapacity for work to persons sent by court decision for forensic medical or forensic psychiatric examination and recognised as incapable of work from the day of admission to the examination;

|  | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection, evaluated based on the following criteria:</p> <p>absence of anamnesis collection;</p> <p>completeness of anamnesis collection;</p> <p>presence of data on past, chronic and hereditary diseases, haemotransfusions, acceptability of medicines, allergological status;</p> <p>development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor anamnesis collection;</p> <p>2) completeness and validity of diagnostic tests, which are evaluated against the following criteria:</p> <p>absence of diagnostic measures;</p> <p>inaccurate report or lack of a report based on the findings of diagnostic tests, resulting in incorrect diagnosis and errors in treatment tactics;</p> <p>performing diagnostic tests stipulated by clinical protocols;</p> <p>performing diagnostic tests with high , unjustified risk to the patient's health, justification of diagnostic tests not included in clinical protocols;</p> <p>conducting diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment/S;</p> <p>3) accuracy, timeliness and validity of the clinical diagnosis, with due consideration of the findings of the tests performed (in case of planned hospitalisation, the tests performed at the pre-hospital stage are also included), which are estimated by the following criteria:</p> |  |

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome causing the severity of the course of the disease is not distinguished, comorbidities and complications are not recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not identified in the complications identified, comorbidities affecting the outcome are not recognised;

the diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated);

4) promptness and quality of consultations with relevant experts, which are estimated based on the following criteria:

lack of counselling, which led to misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take the consultant's opinion into consideration when making the diagnosis partially influenced the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

the consultant's opinion is erroneous and affected the outcome of the disease.

Major violation

Presence of evidence on the evaluation of the objectivity of the reasons for late consultation and the impact of late diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which are evaluated based on the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of ineffective treatment measures without regard to the peculiarities of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy that led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is estimated by the following criteria:

achievement of the expected clinical effect in adherence to the technology of health care services (care);

lack of clinical effect of therapeutic and prophylactic measures due to poor anamnesis and diagnostic studies;

lack of expected clinical effect due to ineffective therapeutic and preventive measures without regard to the peculiarities of the course of the disease, comorbidities,

|  | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection, to be evaluated on the following criteria:</p> <p>absence of anamnesis collection;</p> <p>completeness of anamnesis collection;</p> <p>data on past, chronic and hereditary diseases, haemotransfusions, drug tolerance, allergological status;</p> <p>growth of health complications as a result of tactical errors in the course of treatment and diagnostic measures due to poor anamnesis collection;</p> <p>2) completeness and justification of diagnostic tests, which are evaluated by the following criteria:</p> <p>absence of diagnostic measures;</p> <p>erroneous statement or absence of a statement based on the results of diagnostic studies, which led to erroneous diagnosis and errors in treatment tactics;</p> <p>performance of diagnostic tests stipulated by clinical protocols;</p> <p>diagnostic tests with high, unjustified risk to the patient's health , justification of diagnostic tests not included in clinical protocols;</p> <p>performance of diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified increase in treatment time and cost of treatment;</p> <p>3) accuracy, timeliness and validity of the clinical diagnosis, based on the results of the conducted investigations (in case of planned hospitalisation, investigations conducted at the pre-hospital stage</p> |  |

shall be taken into account), which are evaluated against the following criteria:

the diagnosis is missing, incomplete or erroneous, does not correspond to the international classification of diseases;

the leading pathological syndrome defining the severity of the course of the disease is not highlighted, comorbidities and complications are not recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the indicated complications, comorbidities affecting the outcome are not recognised;

diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for erroneous and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the expertise. The impact of erroneous and (or) untimely diagnosis on the subsequent stages of medical services (care) is estimated;

4) timeliness and quality of consultations of relevant experts, which are estimated against the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to consider the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

consultation was timely, the consultant's opinion was considered when making the diagnosis, failure to implement the consultant's

Major violation

treatment recommendations partially influenced the outcome of the disease;

the consultant's opinion is erroneous and affected the outcome of the disease.

Presence of confirming documentation on the evaluation of the objectivity of the reasons for late consultation and the impact of late diagnosis on the subsequent stages of health services (care);

5) volume, quality and validity of treatment measures, which are estimated under the following criteria:

no treatment when there is an indication;

prescribing treatment in the absence of indications;

prescription of inefficient therapeutic measures without considering the specifics of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of drugs without proven clinical efficacy; unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or progression of complications after medical interventions, all complications encountered, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is estimated against the following criteria:

achievement of the expected clinical effect while observing the technology of rendering medical services (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor history assessment and diagnostic tests;

absence of expected clinical effect due to inefficient therapeutic and preventive measures without regard to the specifics of the course of the disease, comorbidities, complications, prescription of drugs without proven clinical efficacy;

the presence of polypragmasy, which caused the development of undesirable consequences;

8) quality of medical documentation, which is estimated by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature, scope and quality of medical care delivered

Presence of confirming documentation of observance of the following actions when performing pathological autopsies:

1) conducting pathological anatomical autopsy of corpses after the doctors have ascertained biological death, upon submission of the medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his/her deputy for medical (treatment) part of the health care facility to send for a pathological anatomical autopsy;

2) registration of the results of the pathological anatomical autopsy in the form of a pathological anatomical diagnosis (pathological anatomical diagnosis includes: the main disease, complication of the main disease, concomitant disease, combined main disease);

3) transfer of the medical record of an inpatient or medical record of an outpatient with the pathological anatomical diagnosis entered into it to the medical archive of the health care facility no later than ten

working days after the pathological anatomical autopsy;

4) conducting clinical and pathological anatomical examination in cases of death of patients in health care facilities;

5) pathological anatomical autopsy in cases of suspected acute infectious diseases, oncological diseases, pathology of childhood, lethal outcome due to medical manipulations for the purpose of establishing the cause of death and clarifying the diagnosis of fatal disease;

6) arrangement by the chief physician and head of the pathology department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathological anatomy bureau, centralised pathological anatomy bureau and pathological anatomy department the medical records of inpatients for all deceased patients for the previous 24 hours no later than 10 a.m. of the day following the establishment of the fact of death;

8) drawing up:

- medical certificate of death (preliminary, final) by a physician majoring in 'pathological anatomy (adult, paediatric)' on the day of the pathological anatomical autopsy;

- medical certificate of perinatal death (preliminary, final) by a physician specialising in 'pathological anatomy (adult, child)' on the day of the pathological anatomical autopsy;

9) recording the results of the autopsy in the form of a protocol of pathological anatomical examination ;

10) written notification to the judicial and investigative authorities to address the issue of transferring the corpse for forensic medical examination if signs of violent death

Gross violation

are found, and termination of the pathological anatomical examination of the corpse;

11) written notification of a physician majoring in 'pathological anatomy (adult, paediatric)' in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service, immediately after their detection;

12) performing pathological and anatomical examination of the placenta:

- in case of stillbirth;
- in case of all diseases of newborns detected at the time of birth;
- for cases suspected of haemolytic disease in newborns;
- in case of early discharge and dirty waters;
- maternal illness with fever in the last trimester of pregnancy;
- if there is an obvious abnormality in the development or attachment of the placenta;
- suspected congenital anomalies of the foetus;
- in cases of pre-eclampsia, and eclampsia

13) compulsory registration of a foetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

14) the establishment of pathological anatomical autopsies depending on their complexity into the following categories:

- first category;
- second category;
- third category;
- fourth category;

15) establishment of the category of pathological anatomy (adult, paediatric) by a physician specialising in 'pathological anatomy (adult, paediatric)' and the reason for the divergence of

criteria for dynamic observation of persons with MBD:

1 group of dynamic psychiatric observation - persons who are prone by their mental state to socially dangerous actions, including those who have a risk of committing violent acts of a sexual nature against minors, as well as those who have perpetrated particularly dangerous acts in a state of insanity, and who have been ordered by a court to undergo forced medical measures in the form of outpatient mandatory treatment;

2 group of dynamic psychiatric observation - Persons with MBD who have a disability due to mental illness, excluding MBD specified in the diagnostic headings F8 and F9; persons diagnosed with F20 'Schizophrenia' within one year after diagnosis (in this case, if recognised as a person with a disability, he/she continues to be observed in the 2nd group of dynamic psychiatric observation);

2A - persons with frequent and pronounced exacerbations of psychotic symptoms, decompensations, in need of psychopharmacotherapy within the framework of free outpatient treatment, including persons with MBD specified in the diagnostic headings F8 and F9.

2B - persons with stabilised conditions, with moderately progressive course of the process and spontaneous remissions;

dynamic narcological observation group - Persons prone to socially dangerous actions due to clinical manifestations of MBD caused by substance abuse.

Dynamic narcological observation group

1) MBD due to substance abuse in persons sent by court order to forced treatment units;

2) MBD due to substance use in persons who, following a

1) absence of criteria, taking on dynamic observation of persons with MBD, not less than 12 months, with the indication in the EIS - 'recovery, persistent improvement';

2) change of place of residence with travelling outside the serviced territory;

3) absence of reliable data on the location for 12 months, confirmed by a report of the district police inspector and patronage of the district nurse at least once every two months, with the indication in the EIS – “absence of data”;

4) death on the grounds of a medical certificate of death in the form № 045/y and (or) confirmed by data in the register of the attached population, with the indication in the EIS – “death”;

5) persons sentenced to imprisonment for more than 1 year are removed from dynamic monitoring after receiving a response to the request from the Committee on Legal Statistics and Special Records of the General Prosecutor's Office of the Republic of Kazakhstan;

6) persons diagnosed with F20 “Schizophrenia”, recorded in the 2nd group of dynamic psychiatric observation: in case of failure to establish a disability group within 12 months from the moment of dynamic observation.

Criteria for transferring a person with MBD to another group:  
absence of criteria for taking a person with MBD on dynamic observation for at least 12 months

Major violation

Presence of confirming documentation on the implementation of the following activities during dynamic monitoring of a person with MBD by a psychiatric doctor:

1) informing the patient of the need for dynamic monitoring, the list, scope, frequency of examinations, laboratory and instrumental tests, and the period of monitoring;

2) establishing dynamic monitoring in case of written consent of the person with MBD to be placed on dynamic monitoring;

3) referral to a session of the medical advisory board (hereinafter - MAB) to resolve the issue of establishing dynamic monitoring without his/her consent or his/her lawful guardian in the case of refusal of a person with MBD or his/her lawful guardian to voluntarily take up dynamic monitoring;

upon taking a person with MBD under dynamic observation, conducting an initial examination of the patient, establishing the group of dynamic observation, the frequency of examinations, the need for special social services in the field of health care, drawing up an individual treatment plan, individual rehabilitation programme and other measures with due regard to an individual approach, and entering data into electronic information systems (hereinafter referred to as EIS) as per the form of health care records

5) conducting periodic examinations and analysing the results of diagnostic tests, conclusions and recommendations of relevant experts ;

6) monitoring and control of the efficiency of treatment, rehabilitation (habilitation) measures, making adjustments if needed;

7) drawing up documents and referrals for medical and social expert evaluation, medical and social rehabilitation, inpatient substitution, inpatient treatment, including mandatory treatment in the presence of relevant indications;

8) referral for consultation of relevant health care experts, required laboratory and instrumental examinations, examination by a psychologist, consultation by a social worker and other specialists;

9) visits to the person with MBD at the place of his/her residence;

Major violation

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                 |

implementation of PHC by a physician, upon suspicion or identification of a person with a MBD, excluding MBD requiring emergency and urgent medical and social care:

- 1) patient identification;
- 2) diagnostic measures as per clinical protocols;
- 3) establishes a diagnosis and treats MBD under the 10th revision of the International Classification of Diseases (hereinafter referred to as ICD-10), which are within the competence of the PHC physician. If a person is suspected of having a diagnosis of MBD according to ICD-10 that is not within the competence of the PHC physician, the PHC physician refers the person to a MHU (mental health unit) or PMHC by territorial registration;
- 4) in case of diagnoses of borderline substance use disorders falling within the competence of a PHC physician for the first time in the current year - sending information on the patient with passport data (surname, name, patronymic (if any), individual identification number (hereinafter - IIN), address of residence), diagnosis and date of diagnosis, to be entered into the electronic information system (hereinafter - EIS) not later than 5 working days from the date of diagnosis;
- 5) undertaking activities when revealing a person at risk of committing suicide who applied on his/her own or when examining a minor referred by psychologists;
- 6) filling out primary medical documentation;
- 7) reconciliation with the doctor of the MHU or PMHC on newly entered patients in the EIS on registration of persons with MBD, monthly, not later than the 5th day of the month following the reporting period.

Major violation

Implementation of the following activities by a mental health clinician

of a MHU or PMHC when a person with PPR is suspected or identified, excluding MBD requiring emergency and urgent medical and social care:

- 1) patient identification;
- 2) diagnostic measures based on clinical protocols;
- 3) prescription of treatment following clinical protocols (if required);
- 4) verification in the EIS for registration of persons with MBD on the availability of data on the applicant. In case of initial diagnosis of the MBD information is entered into the EIS, including it in the statistical group, in case of previously established diagnosis of the MBD and absence of information in the mentioned EIS information is entered, and in case of availability of information it is supplemented with information;
- 5) decision on dynamic follow-up, as well as termination of dynamic follow-up;
- 6) issuing a referral to a medical advisory board (hereinafter - MAB);
- 7) preparation of medical documentation in respect of a person with MBD in need of medical and social expert appraisal (hereinafter referred to as MSE);
- 8) preparation of documents for persons with drug use disorders caused by substance use for referral for compulsory treatment;
- 9) entering details of a person with a drug use disorder into the EIS no later than 3 working days after receiving a notification from a primary health care physician;
- 10) dynamic follow-up of persons in dynamic follow-up groups based on territorial registration;
- 11) referring persons with suspected or diagnosed MBD for examination and (or) treatment to the territorial Mental Health Centre or RSPCMH (if indicated);
- 12) referring persons with MBD to institutions rendering medical and

treatment and diagnostic measures due to poor quality anamnesis collection;

2) completeness and validity of diagnostic tests, which are evaluated against the following criteria:

absence of diagnostic measures;

erroneous opinion or lack of opinion on the results of diagnostic investigations, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

performing diagnostic tests with high , unjustified risk for the patient's health condition, justification of diagnostic tests not included in the clinical protocols;

performing diagnostic tests that are uninformative for making a correct diagnosis and resulted in an unjustified extension of treatment time and increased cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, based on the results of the conducted investigations (in case of planned hospitalisation, the investigations conducted at the pre-hospital stage are taken into account), which are estimated based on the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome defining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not distinguished with the highlighted complications, comorbidities affecting the outcome are not recognised;

the diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for erroneous and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of the associated disease, rare complications and associated diseases) are reflected in the results of the expertise. The impact of erroneous and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated;

4) timeliness and quality of consultations of relevant experts, which are estimated against the following criteria:

absence of consultation, which led to erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely counselling, failure to take the consultant's opinion into account when making the diagnosis partially influenced the outcome of the disease;

the consultation was timely, the consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendations partially influenced the outcome of the disease;

consultant's opinion was wrong and affected the outcome of the disease.

Presence of supporting documentation on the evaluation of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which are estimated by the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of inefficient treatment measures without regard to the

Major violation

specifics of the course of the disease, concomitant diseases and complications;

performance of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of medicines without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is estimated based on the following criteria:

achievement of the expected clinical effect in observance of the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic examinations;

lack of expected clinical effect due to ineffective therapeutic and preventive measures without considering the specifics of the course of the disease, comorbidities, complications, prescription of drugs without proven clinical efficacy;

the presence of polypragmasy, which caused the development of undesirable consequences;

8) the quality of medical documentation, which is estimated by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature,

the following activities are undertaken:

- 1) patient identification;
- 2) verification of presence and consistency of available medical and other documentation;
- 3) evaluation of mental and somatic condition, laboratory and diagnostic tests results, establishment of preliminary diagnosis, determination of the scope of differential diagnostics, observation regime, therapeutic nutrition and other therapeutic and diagnostic measures according to clinical protocols of diagnostics and treatment;
- 4) filling in primary medical documentation

Major violation

Adherence to observation regimes.  
In clinical inpatient departments of RSPCMH, MHC and multidisciplinary city (regional) hospitals the following types of observation are assumed:

- 1) general observation regime - round-the-clock observation without restriction of movement in the department. The general regime for patients is established when:

absence of danger to themselves and others;

the ability to observe personal hygiene without external help;

- 2) partial hospitalisation regime - the possibility of staying in the ward during the day or at night, with due regard to the need for adaptation in out-of-hospital conditions, as well as the possibility of performing work activities against the background of ongoing treatment and control of symptoms of MBD for the purpose of re-socialisation. The regime of partial hospitalisation is established by the decision of a medical board ( hereinafter referred to as the medical board) consisting of two physicians in the following cases:

absence of danger for oneself and others;

the ability to maintain personal hygiene without assistance;

stabilisation of the mental state requiring daily, but not round-the-clock observation and control;

3) therapeutic leave regime - the possibility of staying outside the ward from several hours to several days for the purpose of gradual adaptation to non-hospital conditions, solution of domestic and social issues, as well as evaluation of the achieved therapeutic effect. The therapeutic leave regime is established by the decision of the MB consisting of two physicians and is granted in the following conditions:

absence of danger for oneself and others;

the ability to observe personal hygiene without assistance;

stabilisation of the mental state, which does not require daily observation.

4) enhanced observation regime - round-the-clock observation and restriction of movement outside the ward. Intensified observation regime is established for patients with:

acute MBD, which do not pose a danger to themselves and others;

the ability to observe personal hygiene without external help;

absence of a psychiatric or somatic disorder requiring a different regime of observation and detention;

5) strict observation regime - round-the-clock continuous observation in the observation ward, constant accompaniment by health care personnel in the ward and outside it. Strict regime for patients is established for patients in case of: immediate danger to themselves and others;

helplessness, i.e. incapacity to independently fulfil their vital needs, in the absence of proper care;

possible serious harm to health if the person is left unsupervised.

The following types of observation are envisaged in clinical inpatient PFSIS wards:

Major violation

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                 |

|     | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection, which is evaluated based on the following criteria:</p> <p>absence of anamnesis collection;</p> <p>comprehensiveness of anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status;</p>                                                                                                                                                                                                                                                                                                                                                                                                                            |                 |

development of complications due to tactical errors in the course of therapeutic and diagnostic measures due to poor quality of anamnesis collection;

2) comprehensiveness and validity of diagnostic tests, which are evaluated based on the following criteria:

absence of diagnostic measures;

erroneous opinion or lack of opinion based on the results of diagnostic tests, which led to erroneous diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

conducting diagnostic tests with a high, unjustified risk to the patient's health, justification of diagnostic tests not included in clinical protocols;

diagnostic tests that are not informative for a correct diagnosis and resulted in an unjustified extension of treatment time and increased cost of treatment;

3) accuracy, timeliness and validity of the clinical diagnosis, with due consideration of the results of the conducted examinations (in case of planned hospitalisation, the examinations conducted at the pre-hospital stage are also considered), which are evaluated against the following criteria:

the diagnosis is absent, incomplete or erroneous, does not correspond to the international classification of diseases;

the leading pathological syndrome defining the severity of the course of the disease is not highlighted, comorbidities and complications are not recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the identified complications, comorbidities affecting the outcome are not recognised;

the diagnosis of the main disease is correct, but comorbidities affecting

the outcome of treatment are not diagnosed.

Objective reasons for erroneous and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the associated disease, rare complications and associated diseases) are reflected in the examination results. The impact of erroneous and (or) untimely diagnosis on the subsequent stages of health care services (care) is evaluated;

4) timeliness and quality of consultations of relevant experts, which are evaluated against the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to observe the consultant's opinion when making the diagnosis partially influenced the outcome of the disease;

timely consultation, consultant's opinion was noted in the diagnosis, failure to follow the consultant's treatment recommendation partially affected the outcome of the disease; the consultant's opinion was wrong and affected the outcome of the disease.

Presence of confirming documentation on the evaluation of the objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of health care services (assistance);

5) volume, quality and reasonableness of treatment measures, which are evaluated based on the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of inefficient treatment measures without consideration of

Major violation

the specifics of the course of the disease, concomitant diseases and complications;

performance of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred are evaluated, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated against the following criteria:

achievement of the expected clinical effect with observance of the technology of rendering health care services (care);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to inefficient therapeutic and preventive measures without due consideration of the specifics of the course of the disease, concomitant diseases, complications, prescription of medicines without proven clinical efficacy;

the presence of polypragmasy that caused the adverse effects;

8) the quality of medical documentation, which is evaluated by the availability, comprehensiveness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature,

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                 |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| 297 | <p>Requirements for the duration of treatment and time of stay in the day hospital.</p> <p>The duration of treatment in the day hospital should not exceed 30 calendar days.</p> <p>If a patient's condition worsens and requires round-the-clock medical supervision and treatment, he/she is hospitalised in an appropriate inpatient ward.</p> <p>The daily stay in the day hospital is at least 6 hours. Two meals a day are included in the day care centre, considering the time of psychotropic medication intake</p>                                                                                                                                                            | Major violation |
| 298 | <p>Observing the requirements for discharge from the day care hospital. Discharge is made upon recovery of the patient or improvement of his/her mental state, when transfer to outpatient treatment is possible, as well as upon completion of examination, expertise, which were the grounds for admission to the day care centre.</p> <p>On the day of the patient's discharge from the facility offering inpatient substitute care, an epicrisis is drawn up, a copy of which is sent to the PMHC, the MHU at the patient's place of residence for inclusion in the outpatient's medical record.</p>                                                                                | Major violation |
|     | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection, which is measured by the following criteria:</p> <p>absence of anamnesis collection;</p> <p>comprehensiveness of anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status;</p> <p>development of complications due to tactical errors in the course of therapeutic and diagnostic measures</p> |                 |

due to poor quality of anamnesis collection;

2) comprehensiveness and validity of diagnostic tests, which are estimated based on the following criteria:

absence of diagnostic measures;

erroneous conclusion or absence of a conclusion based on the results of diagnostic tests, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

conducting diagnostic tests with a high, unjustified risk to the patient's health, justification of diagnostic tests not included in clinical protocols;

diagnostic tests that are not informative for making a correct diagnosis and resulted in an unjustified extension of treatment time and increased cost of treatment;

3) accuracy, timeliness and validity of the clinical diagnosis, with due consideration of the results of the conducted examinations (in case of planned hospitalisation, the examinations conducted at the pre-hospital stage shall be taken into account), which is evaluated based on the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not identified with the identified complications, comorbidities affecting the outcome are not recognised;

the diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for erroneous and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the expertise. The impact of erroneous and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated;

4) timeliness and quality of consultations of relevant experts, which are evaluated based on the following criteria:

absence of consultation, which led to erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to consider the consultant's opinion in making the diagnosis partially affected the outcome of the disease;

timely consultation, consultant's opinion is considered when making the diagnosis, failure to implement the consultant's treatment recommendation partially influenced the outcome of the disease;

consultant's opinion is erroneous and affected the outcome of the disease.

Presence of confirming documentation on the evaluation of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

absence of treatment in the presence of indications;

prescribing treatment in the absence of indications;

prescribing inefficient therapeutic measures without due consideration of the specifics of the course of the disease, concomitant diseases and complications;

Major violation

implementation of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of medicines without proven clinical efficacy; unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or progression of complications after medical interventions, all complications encountered, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is evaluated against the following criteria:

- achievement of the expected clinical effect in adherence to the technology of medical services (care);
- absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic examinations;
- lack of expected clinical effect due to ineffective therapeutic and preventive measures without regard to the specifics of the course of the disease, comorbidities, complications, prescription of medicines without proven clinical efficacy;
- the presence of polypragmasy, which caused the development of undesirable consequences;

8) the quality of medical documentation, which is estimated by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature, scope and quality of medical care provided.

Requirements for entities (facilities) delivering health and social care to persons with mental, behavioural disorders (diseases) in the form of emergency health and social care

| 380 | <p>4) recipients of donor biomaterial - three months;</p> <p>5) sexual partners of HIV-infected persons and contact persons for joint drug administration - till the negative HIV test result is obtained 3 months after the end of the contact; in case of continuing contact, contact persons are examined for HIV infection 2 times a year;</p> <p>6) persons from a nosocomial centre - three months after discharge from a healthcare facility; if more than three months have elapsed since discharge, contact persons are examined once, and if the result is negative, surveillance is discontinued.</p>                                                                                                                                                                                                 | Gross violation |
| 381 | <p>Dynamic monitoring and ensuring antiretroviral therapy of HIV-infected persons.</p> <p>The findings of laboratory testing of contact persons are recorded in the outpatient card of the HIV-infected person on dispensary registration (discordant couples). The HIV-infected person presents data on changes in marital status, surname, first name, patronymic (if available), data on new contact persons for examination and monitoring, which are entered into the electronic tracking database.</p> <p>Anti retroviral therapy to reduce the risk of HIV transmission from the moment of diagnosis is offered following the recommendations of clinical protocols for diagnosis and treatment of HIV infection in adults and children, with the involvement of outreach workers and social workers.</p> | Gross violation |
|     | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection, to be evaluated by the following criteria:</p> <p>absence of anamnesis collection;</p> <p>completeness of history taking;</p>                                                                                                                                                                                                                                                                                                                                                                                                         |                 |

availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status; progression of complications as a result of tactical errors made in the course of treatment and diagnostic measures due to poor anamnesis collection.;

2) comprehensiveness and validity of diagnostic tests, to be evaluated against the following criteria:

absence of diagnostic measures;

erroneous conclusion or absence of a conclusion based on the results of diagnostic tests, which led to erroneous diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

performing diagnostic tests with high , unjustified risks to the patient's health, justification of diagnostic tests not included in clinical protocols;

diagnostic tests that are not informative for establishing a correct diagnosis and resulted in an unjustified extension of treatment time and increased cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, with due consideration of the results of the conducted examinations (in case of planned hospitalisation, the examinations conducted at the pre-hospital stage are also considered), which are estimated using the following criteria:

the diagnosis is absent, incomplete or erroneous, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not defined with the highlighted complications,

comorbidities affecting the outcome are not recognised;  
the diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for erroneous and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated;

4) timeliness and quality of consultations of relevant experts, which are evaluated by the following criteria:

lack of counselling resulting in misinterpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to include the consultant's opinion in the diagnosis partially influenced the outcome of the disease;

timely consultation, consultant's opinion was noted in the diagnosis, failure to follow the consultant's treatment recommendation partially affected the outcome of the disease;  
consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on the evaluation of objectivity of the grounds for untimely consultation and the impact of untimely diagnosis on the subsequent stages of health services (care);

5) volume, quality and validity of treatment measures, which are evaluated against the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

Major violation

prescribing inefficient therapeutic measures without regard to the specifics of the course of the disease, concomitant diseases and complications;

performance of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of medicines without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result to be evaluated by the following criteria:

achievement of the expected clinical effect with observance of the technology of rendering healthcare services (aid);

absence of clinical effect of therapeutic and preventive measures due to poor history taking and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without accounting for the specifics of the course of the disease, comorbidities, complications, prescription of medicines without proven clinical efficacy;

the presence of polypragmasy, which caused the progression of undesirable consequences;

8) the quality of medical documentation, to be estimated by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature,

| 399 | Conformity with donor medical clearance, safety and quality requirements in the manufacture of blood products for medical use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Major violation |
|     | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection that is evaluated by the following criteria:</p> <p>absence of anamnesis collection;</p> <p>completeness of history taking;</p> <p>availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status;</p> <p>development of complications due to tactical errors in the course of therapeutic and diagnostic measures due to poor quality of anamnesis collection;</p> <p>2) comprehensiveness and validity of diagnostic tests estimated by the following criteria:</p> <p>absence of diagnostic measures;</p> <p>erroneous conclusion or absence of a conclusion based on the results of diagnostic tests, which led to</p> |                 |

erroneous diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

conducting diagnostic tests with a high, unjustified risk to the patient's health, justification of diagnostic tests not included in clinical protocols;

performing diagnostic tests that are not informative for making a correct diagnosis and resulted in an unjustified extension of treatment time and increased cost of treatment;

3) accuracy, timeliness and validity of the clinical diagnosis based on the results of tests performed (in case of planned hospitalisation, tests performed at the pre-hospital stage are also taken into account), evaluated by the following criteria:

the diagnosis is absent, incomplete or erroneous, does not correspond to the international classification of diseases;

the leading pathological syndrome defining the severity of the course of the disease is not identified, comorbidities and complications are not recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not identified in the complications identified, comorbidities affecting the outcome are not recognised;

diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective factors of erroneous and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the results of the expertise. The impact of erroneous and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated;

4) timeliness and quality of consultations of relevant professionals to be evaluated by the following criteria:

absence of consultation, which led to Major violation

erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to consider the consultant's opinion in making the diagnosis partially affected the outcome of the disease;

timely consultation, consultant's opinion was respected in diagnosis, failure to implement the consultant's treatment recommendation partially influenced the outcome of the disease;

consultant's opinion was erroneous and affected the outcome of the disease.

Availability of supporting documentation on the evaluation of objectivity of the grounds for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which are estimated by the following criteria:

no treatment when indicated;

prescribing treatment in the absence of indications;

prescription of inefficient therapeutic measures without regard to the specifics of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without considering the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

|     | dose rate from patients daily via an alarm meter and a stationary dose rate measurement system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                 |
| 443 | <p>Presence of supporting documentation on delivery of the cadaver of a patient with administered RPMP of “active” wards to a specially allocated freezing chamber located in the radionuclide support unit of the RNT unit (in the radioactive waste storage facility) in case of lethal outcome. The corpse is held in the freezing chamber until an acceptable level of radioactive decay (at a distance of 1 metre from the body surface - 20 <math>\mu\text{Sv/h}</math>), then the corpse is transported.</p> <p>For urgent pathological examination, the RNT dosimetrist calculates the duration of the autopsy procedure based on the exposure standards for Group B personnel.</p>                                                                                                                                                                                                                                                                                                                                                                                                   | Gross violation |
|     | <p>Presence of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient Support Service and internal expertise and its evaluation against the following criteria:</p> <p>1) quality of anamnesis collection, which is evaluated by the following criteria:</p> <ul style="list-style-type: none"> <li>absence of anamnesis collection;</li> <li>completeness of anamnesis collection;</li> <li>presence of data on past, chronic and hereditary diseases, haemotransfusions, tolerance to medicines, allergological status;</li> <li>development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor anamnesis collection;</li> </ul> <p>2) completeness and validity of diagnostic tests, evaluated by the following criteria:</p> <ul style="list-style-type: none"> <li>absence of diagnostic measures;</li> <li>erroneous opinion or lack of opinion on the results of diagnostic tests, resulting in erroneous diagnosis and errors in treatment tactics;</li> </ul> |                 |

performing diagnostic tests stipulated by clinical protocols;  
conducting diagnostic tests with high , unjustified risk to the patient's health, justification of diagnostic tests not included in clinical protocols;

performing diagnostic tests that are uninformative for making a correct diagnosis and lead to an unjustified increase in the duration of treatment and the cost of treatment;

3) accuracy, timeliness and validity of the clinical diagnosis, based on the results of the investigations performed (in case of planned hospitalisation, studies performed at the pre-hospital stage are also included), that are measured against the following criteria:

the diagnosis is missing, incomplete or erroneous, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease is not identified , associated diseases and complications are not recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not identified with the highlighted complications, comorbidities affecting the outcome are not recognised;

diagnosis of the underlying disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective grounds for erroneous and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of a concomitant disease, rare complications and concomitant diseases) are reflected in the findings of the expertise. The impact of erroneous and (or) untimely diagnosis on the subsequent stages of medical services (care) is evaluated;

4) timeliness and quality of consultations of relevant experts,

which are estimated using the following criteria:

absence of consultation, which led to erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to include the consultant's opinion in the diagnosis partially influenced the outcome of the disease;

timely consultation, consultant's opinion was noted in the diagnosis, failure to implement the consultant's treatment recommendation partially influenced the outcome of the disease;

the consultant's opinion was erroneous and affected the outcome of the disease.

There is supporting documentation on the evaluation of the objectivity of the grounds for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which are estimated by the following criteria:

no treatment when indicated;

prescribing treatment in the absence of indications;

prescription of inefficient therapeutic measures without considering the specifics of the course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without regard to the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or progression of complications after medical interventions, all complications that occurred are considered, including

Major violation

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                 |

|     | <p>those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;</p> <p>7) the achieved result, to be evaluated based on the following criteria:</p> <p>achievement of the expected clinical effect while adhering to the technology of rendering medical services (care);</p> <p>lack of clinical effect of therapeutic and preventive measures due to poor history taking and diagnostic tests;</p> <p>lack of expected clinical effect due to inefficient therapeutic and preventive measures without regard to the specifics of the course of the disease, concomitant diseases, complications, prescription of medicines without proven clinical efficacy;</p> <p>the presence of polypragmasy that caused the development of undesirable consequences;</p> <p>8) the quality of medical documentation, to be estimated by the availability, completion and quality of records in the primary medical documentation meant for recording data on the state of health of patients, reflecting the nature, scope and quality of the health care rendered.</p> |                 |
| 445 | Availability of supporting documentation of record-keeping and accounting records                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Minor violation |

Note:

HIV - human immunodeficiency virus

STI - sexually transmitted infections

CDC - consultative and diagnostic care

MDG - multidisciplinary group

PS psychoactive substances

PHC - primary health care

PFSIS - a psychiatric facility of a specialised type with intensive supervision

MBD - mental, behavioural disorders

ATM - antituberculosis medicines

PMHC - primary mental health centre

RSHF - republican state health care facility engaged in the prevention of HIV infection  
 RSPCMH - republican scientific and practical centre for mental health  
 EMC - emergency medical service  
 EHCS - emergency health care service  
 CVD - cardiovascular disease  
 MHC - mental health centre  
 EIS - electronic information system  
 RND - radioisotope (radionuclide) diagnostics  
 RNT - radionuclide therapy  
 RPMP - radiopharmaceutical medicinal product  
 PET/CT - positron emission tomography combined with a computed tomography scanner  
 SPECT - single photon emission computed tomography scanner

Annex 3

to the Criteria for Evaluating

the Level of Risk in

the Delivery of Health Services (Care)

List of subjective criteria for establishing the degree of risk by

subjective criteria in the sphere of health services (care) provision)

under Article 138

Entrepreneurial Code of the Republic of Kazakhstan in respect of entities (facilities)

offering outpatient and polyclinic care (primary medical and sanitary care and consultative and diagnostic care)

name of a homogeneous group of entities (facilities)

under control

| № s/o                              | Subjective criterion indicator | Source of information on the subjective criterion indicator           | Specific weight by significance, point (the total should not exceed 100 points), wi | Conditions /values, xi |                    |                    |

epicrisis shall indicate the need for repeated examination for HIV and hepatitis B and C at the place of residence.

HIV testing of recipients as part of the guaranteed scope of free medical care shall be carried out in state health-care organisations working in the area of HIV prevention

Information on transfusion and obstetric anamnesis shall be entered in the patient's medical record before transfusion therapy shall begin:

previous transfusions, when and in connection with what;

whether there have been any post-transfusion complications, pregnancies that have resulted in the birth of babies with haemolytic disease of the new-born.

In case of development of complications during the biological test, during transfusion or after it, a detailed record(s) is made describing the recipient's condition, vital function monitoring data, treatment methods and their effectiveness.

Immediate laboratory control of the recipient's blood and urine shall be performed.

Availability of supporting medical documentation on indications for hospitalisation in day hospital at outpatient and polyclinic health care organisations and in hospital at home:

1) exacerbation of chronic diseases that do not require

round-the-clock medical supervision;

2) active planned recuperation of a group of patients with chronic diseases subject to dynamic monitoring;

3) follow-up treatment of a patient on the next day after inpatient treatment on medical grounds;

4) second and third stage medical rehabilitation courses;

5) palliative care;

6) orphan diseases in children associated with a high risk of infectious complications and requiring isolation during seasonal viral diseases to receive regular enzyme replacement and antibacterial therapy.

The indications for hospitalisation in a day hospital at a 24-hour hospital shall be:

1) carrying out operations and interventions with special preoperative preparation and resuscitation support;

2) performance of complex diagnostic tests requiring special preliminary preparation and not available in outpatient and polyclinic health care organisations;

3) monitoring of patients whose treatment involves transfusion of blood products, intravenous infusions of blood substituting fluids, specific hyposensitising therapy, injections of potent drugs, intra-articular injections of drugs;

4) treatment on the next day after inpatient treatment if there are

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit conducted by the Patient support service and internal expertise and its evaluation according to the following criteria:</p> <p>Quality of history taking, which shall be assessed by the following criteria:</p> <p>absence of anamnesis collection;</p> <p>Completeness of anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, performed haem transfusions, tolerance of medicines, allergology status;</p>                                                                                                                                                             |  |

development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor quality anamnesis collection;

2) completeness and validity of diagnostic tests, which shall be evaluated according to the following criteria:

absence of diagnostic measures;

incorrect conclusion or absence of a conclusion based on the results of diagnostic investigations, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

carrying out diagnostic tests with high, unjustified risk for the patient's health, justification of diagnostic tests not included in clinical protocols;

carrying out diagnostic tests that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment time and the cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalisation, investigations conducted at the pre-hospital stage shall be also taken into account), which shall be assessed according to the following criteria:

the diagnosis is absent, incomplete or incorrect,

shall not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome shall not be highlighted with the highlighted complications, comorbidities affecting the outcome shall not be recognised;

the diagnosis of the main disease shall be correct, but comorbidities affecting the outcome of treatment shall not be diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of the associated disease, rare complications and associated diseases) shall be reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) shall be assessed;

4) timeliness and quality of consultations of specialised specialists, which shall be assessed according to the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take the consultant's opinion into account when making the diagnosis

partially influenced the outcome of the disease;  
timely consultation, consultant's opinion shall have been taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;  
consultant's opinion has been wrong and affected the outcome of the disease.  
Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);  
5) volume, quality and validity of treatment measures, which shall be assessed according to the following criteria:  
absence of treatment in the presence of indications;  
prescription of treatment in the absence of indications;  
prescription of ineffective treatment measures without taking into account the specifics of the course of the disease, concomitant diseases and complications;  
performance of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescription of drugs without proven clinical efficacy;  
unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred , including those caused by surgical interventions ( delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which shall be assessed according to the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the specifics of the course of the disease, concomitant diseases, complications, prescription of medicines

7) the achieved result, which shall be assessed by the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures

without taking into account the peculiarities of the course of the disease, concomitant diseases, complications, prescription of drugs without proven clinical efficacy;  
the presence of polypragmasy, which caused the development of undesirable consequences;  
8) the quality of medical documentation, which shall be assessed by the availability, completeness and quality of records in the primary medical documentation intended for recording data on the state of health of patients, reflecting the nature, scope and quality of medical care provided.

There is documentation of compliance with the following actions when performing pathological autopsies:

- 1) conducting a pathological anatomical autopsy of corpses after the doctors have ascertained biological death, after providing the medical record of a hospital patient or the medical record of an outpatient patient with a written order from the chief physician or his deputy for the medical (treatment) part of the health care organisation to send for a pathological anatomical autopsy;
- 2) registration of the results of the pathological anatomical autopsy in the form of a pathological anatomical diagnosis (pathological anatomical diagnosis includes: main disease, complication of

the main disease, concomitant disease, combined main disease);

3) transfer of the medical record of an inpatient or medical record of an outpatient with the pathological anatomical diagnosis entered into it to the medical archive of the health care organisation no later than ten working days after the pathological anatomical autopsy;

4) conducting clinical and pathological anatomical examination in cases of death of patients in health care organisations;

5) pathological anatomical autopsy in cases of suspected acute infectious diseases, oncological diseases, pathology of childhood, lethal outcome due to medical manipulations in order to establish the cause of death and clarify the diagnosis of a fatal disease;

6) organisation by the chief physician and head of the pathology department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathological anatomical bureau, centralised pathological anatomical bureau and pathological anatomical department of medical records of in-patients for all deceased for the previous day not later than 10 a.m. of the day following the establishment of the fact of death;

8) execution of:

- medical certificate of death (preliminary, final) by a doctor in the speciality of "pathological anatomy (adult, paediatric)" on the day of the pathological anatomical autopsy;
- medical certificate of perinatal death (preliminary, final) by a doctor specialising in "pathological anatomy (adult, child)" on the day of the pathological anatomical autopsy;
- 9) registration of autopsy results in the form of a protocol of pathological anatomical examination; 10 ) written notification to the forensic investigative authorities to address the issue of transferring the corpse for forensic medical examination in case of detection of signs of violent death and termination of pathological anatomical examination of the corpse;
- 11) written notification of the doctor in the speciality "pathological anatomy (adult, child)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service bodies immediately after their detection;
- 12) carrying out pathological and anatomical examination of the placenta:
  - in case of stillbirth;
  - in all diseases of new-borns detected at the time of birth;

- in cases suspected of haemolytic disease of new-borns;
- in cases of early discharge and dirty waters;
- in cases of maternal illness with fever in the last trimester of pregnancy;

9) registration of autopsy results in the form of a protocol of pathological anatomical examination; 10 ) written notification to the forensic investigative authorities to address the issue of transferring the corpse for forensic medical examination in case of detection of signs of violent death and termination of pathological anatomical examination of the corpse;

11) written notification of the doctor in the speciality "pathological anatomy ( adult, child)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service bodies immediately after their detection;

12) carrying out pathological and anatomical examination of the placenta:

- in case of stillbirth;
- in all diseases of new-borns detected at the time of birth;
- in cases suspected of haemolytic disease of new-borns;
- in cases of early discharge and dirty waters;

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

|  | <p>Compliance with the following requirements when issuing a maternity leave and certificate of temporary incapacity for work:</p> <p>- A sheet or certificate of temporary disability for pregnancy and childbirth shall be issued by a medical worker ( obstetrician-gynaecologist) , or in his absence, by a physician, in conjunction with the head of the department after the conclusion of the Medical consultative commission from thirty weeks of pregnancy for a period of one hundred and twenty-six calendar days ( seventy calendar days before childbirth and fifty-six calendar days after childbirth) in the case of normal childbirth.</p> <p>For women residing in territories affected by nuclear tests, a sheet or certificate of incapacity for</p> |  |

pregnancy and childbirth shall be issued from twenty-seven weeks of pregnancy for a duration of one hundred and seventy calendar days (ninety-one calendar days before childbirth and seventy-nine calendar days after childbirth) for normal childbirth;

(2) For women who have temporarily left their permanent place of residence within the Republic of Kazakhstan, a sheet or certificate of temporary disability for pregnancy and childbirth shall be issued (extended) in the medical organisation where the birth occurred or in the antenatal clinic (office) at the place of observation in accordance with the discharge (exchange card) of the obstetric organisation.

(3) In the case of complicated labour or the birth of two or more children, the sheet or certificate of temporary incapacity for work is extended for an additional fourteen calendar days by a medical worker (obstetrician-gynaecologist) or, in his/her absence, by a physician, in conjunction with the head of the department, after the conclusion of the Medical consultative commission at the place of observation in accordance with the discharge of the obstetric health-care organisation. In such cases, the total duration of prenatal and postnatal leave is one hundred and forty calendar days (seventy calendar days before and seventy

calendar days after childbirth).

For women residing in areas affected by nuclear tests, in the case of complicated childbirth or the birth of two or more children, the sheet or certificate of temporary incapacity for work is extended for an additional fourteen calendar days, and the total duration of prenatal and postnatal leave is one hundred and eighty-four days (ninety-one calendar days before childbirth and ninety-three calendar days after childbirth);

(4) In the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, the woman is given a certificate of incapacity for work for seventy calendar days after childbirth.

In the case of childbirth at twenty-two to twenty-nine weeks of pregnancy and the birth of a dead foetus or a child with a body weight of five hundred grams or more, who died before seven days of life, the woman is issued a sheet or certificate of temporary disability for fifty-six calendar days after childbirth;

(5) Women living in territories affected by nuclear tests, in the event of childbirth at twenty-two to twenty-nine weeks' gestation and the birth of a child with a body weight of five hundred grams or more who has lived for

more than seven days, a certificate of temporary incapacity for work shall be issued for ninety-three calendar days after childbirth.

For women residing in territories affected by nuclear tests, in the case of childbirth at twenty-two to twenty-nine weeks of pregnancy and the birth of a dead foetus or a child with a body weight of five hundred grams or more who died before seven days of life, a certificate of temporary incapacity for work shall be issued for seventy-nine calendar days after childbirth;

6) when a woman applies for a temporary disability certificate during pregnancy, maternity leave is calculated cumulatively and is granted in full, regardless of the number of days actually used before the birth.

When a woman applies for a temporary disability certificate after childbirth, only the leave after childbirth shall be granted for the duration provided for in this paragraph;

7) if a woman becomes pregnant while on paid annual leave or unpaid leave to care for a child up to the age of three, a temporary disability certificate shall be issued for all days of maternity leave, except in the cases provided for in the second part of subparagraph 6) of this paragraph;

8) in case of death of the mother during childbirth or in the postnatal period, a sheet or certificate of temporary incapacity for

work shall be issued to the person caring for the new-born;

9) in the case of an operation for artificial termination of pregnancy, a sheet or certificate of temporary incapacity for work shall be issued by a doctor together with the head of the department for the period of stay in the hospital and outpatient department where the operation was performed, and in the case of complications - for the entire period of temporary incapacity for work.

In case of spontaneous abortion (miscarriage), a sheet or certificate of temporary incapacity for work is issued for the entire period of temporary incapacity for work;

10) in the case of embryo transfer surgery, a sheet or certificate of temporary incapacity for work is issued by the medical organisation that performed the surgery from the day of embryo transfer until the pregnancy is established.

Individuals who have adopted a new-born child (children), as well as the biological mother in the case of surrogate motherhood directly from the maternity hospital shall be issued a sheet or certificate of temporary incapacity for work from the day of adoption and until the expiry of fifty-six calendar days from the date of birth of the child.

Availability of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical

audit by the Patient Support Service and internal expertise and its evaluation according to the following criteria:

1) quality of anamnesis collection, which is assessed according to the following criteria:

absence of anamnesis collection;

Completeness of anamnesis collection;

availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status;

development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor quality anamnesis collection;

2) completeness and validity of diagnostic tests, which shall be evaluated according to the following criteria:

absence of diagnostic measures;

incorrect conclusion or absence of a conclusion based on the results of diagnostic investigations, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

carrying out diagnostic tests with high, unjustified risk for the patient's health, justification of diagnostic tests not included in clinical protocols;

carrying out diagnostic tests that are not informative for making a correct diagnosis and that

lead to an unjustified increase in treatment time and the cost of treatment;

3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalisation, investigations conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis shall be absent, incomplete or incorrect, shall not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the highlighted complications, comorbidities affecting the outcome are not recognised

;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of the associated disease, rare complications and associated diseases) are reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the

subsequent stages of medical services (care) is assessed;

4) timeliness and quality of consultations of specialised specialists, which shall be assessed according to the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take the consultant's opinion into account when making the diagnosis partially influenced the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

consultant's opinion was wrong and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

absence of treatment in the presence of indications;

prescription of treatment in the absence of indications;

prescription of ineffective treatment measures without taking into account the specifics of the course of

the disease, concomitant diseases and complications; performance of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred , including those caused by surgical interventions ( delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is assessed by the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the peculiarities of the course of the disease, concomitant diseases,

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |

|   | <p>Availability of supporting documentation that the following requirements shall have been met when issuing a maternity leave and certificate of temporary disability:</p> <p>- A sheet or certificate of temporary disability for pregnancy and childbirth shall be issued by a medical worker (obstetrician-gynaecologist), or in his/her absence, by a physician, together with the head of the department after the conclusion of the Medical consultative commission from thirty weeks of pregnancy for a period of one hundred and twenty-six calendar days (seventy calendar days before childbirth and fifty-six calendar days after childbirth) in the case of normal childbirth.</p> <p>For women residing in territories affected by nuclear tests, a sheet or certificate of incapacity for pregnancy and childbirth shall be issued from twenty-seven weeks of</p> |  |  |

pregnancy for a duration of one hundred and seventy calendar days (ninety-one calendar days before childbirth and seventy-nine calendar days after childbirth) for normal childbirth;

(2) For women who have temporarily left their permanent place of residence within the Republic of Kazakhstan, a sheet or certificate of temporary disability for pregnancy and childbirth shall be issued (extended) in the medical organisation where the birth occurred or in the antenatal clinic (office) at the place of observation in accordance with the discharge (exchange card) of the obstetric organisation.

(3) In the case of complicated labour or the birth of two or more children, the sheet or certificate of temporary incapacity for work is extended for an additional fourteen calendar days by a medical worker (obstetrician-gynaecologist) or, in his/her absence, by a physician, in conjunction with the head of the department, after the conclusion of the Medical consultative commission at the place of observation in accordance with the discharge of the obstetric health-care organisation. In such cases, the total duration of prenatal and postnatal leave is one hundred and forty calendar days (seventy calendar days before and seventy calendar days after childbirth).

For women residing in areas affected by nuclear tests, in the case of complicated childbirth or the birth of two or more children, the sheet or certificate of temporary incapacity for work is extended for an additional fourteen calendar days, and the total duration of prenatal and postnatal leave is one hundred and eighty-four days (ninety-one calendar days before childbirth and ninety-three calendar days after childbirth);

(4) In the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, the woman shall be given a certificate of incapacity for work for seventy calendar days after childbirth.

In the case of childbirth at twenty-two to twenty-nine weeks of pregnancy and the birth of a dead foetus or a child with a body weight of five hundred grams or more, who died before seven days of life, the woman shall be issued a sheet or certificate of temporary disability for fifty-six calendar days after childbirth;

(5) Women living in territories affected by nuclear tests, in the event of childbirth at twenty-two to twenty-nine weeks' gestation and the birth of a child with a body weight of five hundred grams or more who has lived for more than seven days, a certificate of temporary

incapacity for work shall be issued for ninety-three calendar days after childbirth.

For women residing in territories affected by nuclear tests, in the case of childbirth at twenty-two to twenty-nine weeks of pregnancy and the birth of a dead foetus or a child with a body weight of five hundred grams or more who died before seven days of life, a certificate of temporary incapacity for work shall be issued for seventy-nine calendar days after childbirth;

6) when a woman applies for a temporary disability certificate during pregnancy, maternity leave shall be calculated cumulatively and shall be granted in full, regardless of the number of days actually used before the birth.

When a woman applies for a temporary disability certificate after childbirth, only the leave after childbirth shall be granted for the duration provided for in this paragraph;

7) if a woman becomes pregnant while on paid annual leave or unpaid leave to care for a child up to the age of three, a temporary disability certificate shall be issued for all days of maternity leave, except in the cases provided for in the second part of subparagraph 6) of this paragraph;

8) in case of death of the mother during childbirth or in the postnatal period, a sheet or certificate of temporary incapacity for work shall be issued to the

person caring for the new-born;

9) In the case of an operation for induced termination of pregnancy, a sheet or certificate of temporary incapacity for work shall be issued by a doctor in conjunction with the head of the department for the period of stay in the hospital and outpatient department where the operation has been performed, and in the case of a complication - for the entire period of temporary incapacity for work.

In case of spontaneous abortion (miscarriage), a sheet or certificate of temporary incapacity for work is issued for the entire period of temporary incapacity for work;

10) in the case of embryo transfer surgery, a sheet or certificate of temporary incapacity for work is issued by the medical organisation that performed the surgery from the day of embryo transfer until the pregnancy is established.

Individuals who have adopted a new-born child (children), as well as the biological mother in the case of surrogate motherhood directly from the maternity hospital shall be issued a sheet or certificate of temporary incapacity for work from the day of adoption and until the expiry of fifty-six calendar days from the date of birth of the child.

Availability of medical documentation on compliance with the following requirements during the examination of temporary incapacity for

work, issuance of certificates and certificates of temporary incapacity for work (form № 001/y "Medical card of inpatient patient", form № 052/y "Medical card of outpatient patient", stubs of certificates of temporary incapacity for work of patients, form № 025/y "Journal for recording conclusions of medical advisory commission", form № 029/y "Book of registration of certificates of temporary inability to work", form № 037/y "Certificate № \_\_\_\_\_ on temporary disability of a student, college student, vocational school, sickness, quarantine and other reasons for absence of a child attending school, pre-school organisation (underline)", form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

1) the presence of an examination of the person and the recording of data on his/her state of health in the medical card of an outpatient (inpatient) patient, justifying the need for temporary exemption from work; 1) examination of the person and recording of data on his/her state of health in the medical card of an outpatient (inpatient) patient justifying the need for temporary exemption from work;

2) issuance of a sheet and certificate of temporary incapacity for work on the day of discharge of individuals under inpatient treatment (including day hospitals, rehabilitation centres) for the entire

period of inpatient treatment;

3) closing of the sheet and certificate of temporary incapacity for work on the date of discharge from the hospital if the individuals' working capacity has been fully restored;

4) extension of the temporary disability certificate and certificate of temporary incapacity for work for a period of time, taking into account the time necessary for the person to visit a medical worker at the outpatient clinic or to call a medical worker at home (but not more than one calendar day). Individuals who received treatment outside the region of residence shall be taken into account the time required to arrive at the place of his/her permanent residence (but not more than four calendar days);

5) issuance of a certificate of temporary incapacity for work for injuries sustained under the influence of alcohol or drugs, as well as acute alcohol or drug intoxication, for the entire period of temporary incapacity for work;

6) issuance of a sheet and a certificate of temporary incapacity for work to individuals suffering from mental illness in the event of failure to apply to a medical organisation in a timely manner for the past days, upon the conclusion of the medical advisory commission of a psychoneurological dispensary or a medical officer (psychiatrist) in

following actions when performing pathological autopsies:

- 1) conducting a pathological anatomical autopsy of cadavers after the physicians have ascertained biological death, after providing the medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his deputy for the medical (treatment) part of the health care organisation to send for a pathological anatomical autopsy;
- 2) transfer of the medical record of an inpatient or medical record of an outpatient with the pathological anatomical diagnosis entered into it to the medical archive of the health care organisation no later than ten working days after the pathological anatomical autopsy;
- 3) conducting clinical and pathological anatomical examination in cases of patient deaths in health care organisations;
- 4) organisation of virological (immunofluorescence) and bacteriological examination of autopsy materials in cases of suspected infectious diseases by the chief physician and head of the pathology department;
- 5) transfer to pathological anatomical bureaus, centralised pathological anatomical departments and pathological anatomical departments of medical records of inpatients for all deceased

patients for the previous day not later than 10 a.m. of the day following the establishment of the fact of death

6) registration of the results of pathological anatomical autopsy in the form of pathological anatomical diagnosis (pathological anatomical diagnosis includes: main disease, complication of the main disease, concomitant disease, combined main disease);

7) execution of: - medical certificate of death (preliminary, final) by a doctor in the speciality "pathological anatomy (adult, paediatric)" on the day of the pathological anatomical autopsy;

- medical certificate of perinatal death (preliminary, final) by a doctor specialising in "pathological anatomy (adult, child)" on the day of the pathological anatomical autopsy;

8) registration of the autopsy results in the form of a protocol of pathological anatomical examination;

9) written notification to the forensic investigative authorities to resolve the issue of transferring the corpse for forensic medical examination if signs of violent death are detected, and termination of the pathological and anatomical examination of the corpse;

10) written notification of the doctor in the speciality "pathological anatomy (adult, child)" in case of initial detection during autopsy of signs of acute

infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service bodies immediately after their detection;

11) conducting a pathological and anatomical examination of the placenta:

- in all diseases of new-borns detected at the time of birth;
- in cases suspected of haemolytic disease of new-borns;
- in cases of early discharge of waters and dirty waters;
- in cases of maternal illness with high fever in the last trimester of pregnancy;
- if there is an obvious abnormality in the development or attachment of the placenta;
- suspected congenital anomalies of the foetus;
- in cases of pre-eclampsia and eclampsia.

12) mandatory registration of a foetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

13) the establishment of pathological anatomical autopsy, depending on the complexity into the following categories:

- first category;
- second category;
- third category;
- fourth category;

14) establishment of the category of pathological anatomy (adult, paediatric)

by a doctor in the specialty "pathological anatomy (adult, paediatric)" of the category of pathological anatomical autopsy and the reason for the divergence of diagnoses when the final clinical and pathological anatomical diagnoses diverge;

15) detailed analysis with the definition of the profile and categories of iatrogenic pathology in all cases of iatrogenic pathology identified as a result of pathological anatomical autopsy

Availability of supporting documentation on compliance with the following requirements in the organisation of obstetric and gynaecological care at the outpatient and polyclinic level:

1) ensuring early registration of pregnant women, on the day of their application to the medical organisation, without taking into account the insured status;

2) home health care for pregnant women, maternity patients, gynaecological patients and the group of women of fertile age (hereinafter referred to as "WFA") at social risk, universal (compulsory) patronage observation of pregnant women up to 12 weeks and 32 weeks of pregnancy

(3) Dispensary monitoring of pregnant women for the prevention and early detection of complications of pregnancy, childbirth and the postnatal period, with the selection of women "at risk";

- (4) Prenatal screening - a comprehensive examination of pregnant women to identify the risk group for chromosomal abnormalities and congenital malformations of the intrauterine foetus;
- (5) Identification of pregnant women in need of timely hospitalisation in day hospitals and pregnancy pathology departments of inpatient medical institutions providing obstetric and gynaecological care and specialised medical institutions with extragenital pathology, in accordance with the principles of regionalisation of perinatal care;
- 6) referring pregnant women, women in labour and maternity for specialised care with medical supervision, including the use of high-tech medical services, to medical organisations at the national level;
- (7) Conducting prenatal education for pregnant women in preparation for childbirth, including partner births, informing pregnant women about warning signs, effective perinatal technologies, principles of safe motherhood, breastfeeding and perinatal care;
- 8) patronage of pregnant women and maternity women, as indicated;
- (9) Counselling and provision of services on family planning and reproductive health care;
- (10) Prevention and detection of sexually transmitted infections for

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |

| 24 | <p>Availability of supporting documentation on the use of donor sperm in assisted reproductive methods and technologies (hereinafter referred to as the ART). Sexual abstinence shall be required for 3-5 days before sperm donation. Sperm shall be obtained by masturbation. The ejaculate shall be collected in a special sterile, pre-labelled container. This procedure shall be carried out in a special room with a separate entrance, appropriate interior, sanitary unit with a washbasin. In the absence of donor sperm in the medical organisation, or at the patient's request, donor sperm from other organisations that have a donor sperm bank is used. Only cryopreserved donor sperm shall be used after repeated (6 months after cryopreservation) negative results of HIV, syphilis and hepatitis B and C tests. The use of cryopreserved (thawed) sperm shall ensure :</p> <p>1) carrying out measures to prevent the transmission of HIV, syphilis, hepatitis and other sexually transmitted infections;</p> <p>2) excluding the possibility of meeting between the donor and the recipient.</p> <p>Requirements for donor semen:</p> |  |  |

| Provision of medical care to new-borns |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |
|                                        | <p>Availability of supporting documentation on compliance with the following requirements when organising medical care for new-borns at the inpatient level:</p> <p>1) provision of medical care to new-borns according to the levels of regionalisation of perinatal care depending on the indications;</p> <p>2) the presence in the structure of the first level of regionalisation of perinatal care: individual maternity wards, wards for the joint stay of mother and child, vaccination rooms, intensive care wards for new-borns, as well as the position of a doctor in the specialty of paediatrics ( neonatology) and a</p>                                |  |  |

round-the-clock post of a neonatal nurse;

3) The availability in hospitals of the second level of regionalisation of neonatal resuscitation and intensive care wards with a full set of resuscitation equipment, artificial ventilation devices with different ventilation modes (constant positive pressure in the respiratory tract), cuvées, a clinical and diagnostic laboratory, and a 24-hour post (a neonatologist and a paediatric nurse) as stipulated in the staff schedule;

4) Compliance with the following requirements in hospitals of the third level of regionalisation of perinatal care:

Availability of a round-the-clock neonatal post, clinical, biochemical and bacteriological laboratory, intensive care unit for women and new-borns, as well as neonatal pathology and prematurity nursing unit of joint stay with the mother.

Availability of a neonatal intensive care unit, a neonatal pathology unit and a premature infant care unit equipped with modern therapeutic and diagnostic equipment, medicines, a 24-hour post (doctor and nurse) and an express laboratory.

5) Observance of the following requirements in the first level hospitals to the sick new-born:

primary resuscitation care;  
intensive and supportive therapy;  
oxygen therapy;

invasive or non-invasive respiratory therapy;  
phototherapy;  
therapeutic hypothermia;  
infusion therapy and/or parenteral nutrition;  
treatment according to clinical protocols for diagnosis and treatment.  
Compliance with the following requirements in second-level hospitals for the sick neonate:  
Provision of primary resuscitation care to the new-born and stabilisation of the condition, nursing premature babies with a gestational age of more than 34 weeks;  
catheterisation of central veins and peripheral vessels;  
detection and treatment of congenital malformations, intrauterine developmental delay, neonatal hypoglycaemia, hyperbilirubinaemia, neonatal sepsis, central nervous system damage, respiratory distress syndrome, pneumothorax, necrotizing enterocolitis and other pathological conditions of the neonatal period;  
intensive care, including correction of vital functions (respiratory, cardiovascular, metabolic disorders), invasive and non-invasive respiratory therapy, infusion therapy and parenteral nutrition;  
If highly specialised care is required, the degree of readiness to be transported with the mother to a third-level obstetrics organisation or a national institution is determined.

Availability of supporting documentation on compliance with the requirements for the provision of medical care to new-borns in third-level medical organisations:

- 1) provision of primary resuscitation to new-borns and care of new-borns
- 2) intensive and supportive therapy: respiratory therapy, catheterisation of central veins and peripheral vessels, therapeutic hypothermia, parenteral nutrition, nursing premature infants;
- 3) diagnosis and treatment of congenital malformations, delayed intrauterine development of the foetus (low birth weight by gestational age), neonatal hypoglycaemia, neonatal sepsis, respiratory distress syndrome, hyperbilirubinaemia, necrotising enterocolitis, pneumothorax, bronchopulmonary dysplasia, persistent pulmonary hypertension of new-borns, perinatal lesions of the central nervous system and other pathological conditions of the neonatal period;
- 4) carrying out intensive and supportive therapy, therapeutic hypothermia, parenteral nutrition;
- 5) invasive and non-invasive respiratory therapy;
- 6) nursing premature babies;
- (7) Providing round-the-clock consultative, therapeutic and diagnostic assistance to specialists at the first and second levels of regionalisation, and

Availability of documents establishing the fact of co-payment                                                                                                                                                                                                                |  |  |
| 53 | Availability of medical documentation on the consultation of a paediatric cardiologist (cardiac surgeon) when a congenital malformation of the cardiovascular system shall be detected in obstetric institutions, and, if medically indicated, transfer of the new born to a specialised hospital.                                                                            |  |  |
| 54 | Availability of medical documentation on the use of opportunities for consultation with relevant national organisations, through telemedicine network in case of difficulty in verifying the diagnosis of the child, determining the tactics of management. If it is necessary to transfer the child to specialised republican organisations.                                 |  |  |
|    | Availability of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient support service and internal expertise and its evaluation according to the following criteria:<br>1) quality of anamnesis collection, which shall be assessed according to the following criteria:<br>absence of anamnesis collection; |  |  |

completeness of anamnesis collection;  
availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergology status;  
development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor quality anamnesis collection;  
2) completeness and validity of diagnostic tests, which shall be evaluated according to the following criteria:  
absence of diagnostic measures;  
incorrect conclusion or absence of a conclusion based on the results of diagnostic investigations, which led to incorrect diagnosis and errors in treatment tactics;  
performance of diagnostic tests stipulated by clinical protocols;  
carrying out diagnostic tests with high, unjustified risk for the patient's health, justification of diagnostic tests not included in clinical protocols;  
carrying out diagnostic tests that shall not be informative for making a correct diagnosis and that lead to an unjustified increase in treatment time and the cost of treatment;  
3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalisation, investigations conducted at the pre-hospital stage shall

also be taken into account), which shall be assessed according to the following criteria:

the diagnosis shall be absent, incomplete or incorrect, shall not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the highlighted complications, comorbidities affecting the outcome are not recognised ;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of the associated disease, rare complications and associated diseases) are reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) shall be assessed;

4) timeliness and quality of consultations of specialised specialists, which shall be assessed according to the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms and syndromes that

negatively affected the outcome of the disease;  
timely consultation, failure to take the consultant's opinion into account when making the diagnosis partially influenced the outcome of the disease;  
timely consultation, consultant's opinion has been taken into account when making the diagnosis , failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;  
consultant's opinion was wrong and affected the outcome of the disease.  
Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);  
5) volume, quality and validity of treatment measures, which shall be assessed according to the following criteria:  
absence of treatment in the presence of indications;  
prescription of treatment in the absence of indications;  
prescription of ineffective treatment measures without taking into account the specifics of the course of the disease, concomitant diseases and complications;  
performance of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescription of drugs without proven clinical efficacy;  
unjustified deviation from the requirements of clinical

protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred , including those caused by surgical interventions ( delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which shall be assessed according to the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the specifics of the course of the disease, concomitant diseases, complications, prescription of medications .

7) the achieved result, which is assessed according to the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive

- 1) conducting a pathological anatomical autopsy of corpses after the doctors have ascertained biological death, after providing the medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his deputy for the medical (treatment) part of the health care organisation to send for a pathological anatomical autopsy;
- 2) registration of the results of the pathological anatomical autopsy in the form of a pathological anatomical diagnosis (pathological anatomical diagnosis includes: main disease, complication of the main disease, concomitant disease, combined main disease);
- 3) transfer of the medical record of an inpatient or medical record of an outpatient with the pathological anatomical diagnosis entered into it to the medical archive of the health care organisation no later than ten working days after the pathological anatomical autopsy;
- 4) conducting clinical and pathological anatomical examination in cases of death of patients in health care organisations;
- 5) pathological anatomical autopsy in cases of suspected acute infectious diseases, oncological diseases, pathology of childhood, lethal outcome due to medical manipulations in order to establish the cause of death and clarify the diagnosis of a fatal disease;

- 6) organisation by the chief physician and head of the pathology department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;
- 7) transfer to the pathological anatomical bureau, centralised pathological anatomical bureau and pathological anatomical department of medical records of in-patients for all deceased for the previous day not later than 10 a.m. of the day following the establishment of the fact of death;
- 8) execution of:
- medical certificate of death (preliminary, final) by a doctor in the speciality of "pathological anatomy (adult, paediatric)" on the day of the pathological anatomical autopsy;
  - medical certificate of perinatal death (preliminary, final) by a doctor specialising in "pathological anatomy (adult, child)" on the day of the pathological anatomical autopsy;
- 9) registration of the results of the autopsy in the form of a protocol of pathological anatomical examination; 10) written notification to the judicial and investigative authorities to address the issue of transferring the corpse for forensic medical examination in case of detection of signs of violent death and

termination of the pathological anatomical examination of the corpse;

11) written notification of the doctor in the speciality "pathological anatomy (adult, child)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, unusual reaction to vaccination, as well as emergency notification to the state sanitary and epidemiological service bodies immediately after their detection;

12) carrying out pathological and anatomical examination of the placenta:

- in case of stillbirth;
- in all diseases of new-borns detected at the time of birth;
- in cases suspected of haemolytic disease of new-borns;
- in cases of early discharge and dirty waters;
- in cases of maternal illness with fever in the last trimester of pregnancy;
- if there is an apparent abnormality in the development or attachment of the placenta;
- suspected congenital anomalies of the foetus;
- in cases of pre-eclampsia, eclampsia and eclampsia

13) mandatory registration of a foetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

14) the establishment of pathological anatomical

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| 39. | <p>Availability of a written application from the spouse, close relatives or legal representatives of the deceased, or a written will be given by the person during his/her lifetime to release the corpse without a pathological anatomical autopsy, in the absence of suspicion of violent death</p>                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
|     | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient support service and internal expertise and its evaluation according to the following criteria:</p> <p>1) quality of anamnesis collection, which is assessed according to the following criteria:</p> <p>absence of anamnesis collection;</p>                                                                                                                                                                                                                                                                                                                                                      |  |  |

Completeness of anamnesis collection;  
availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status;  
development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor quality anamnesis collection;  
2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:  
absence of diagnostic measures;  
incorrect conclusion or absence of a conclusion based on the results of diagnostic investigations, which led to incorrect diagnosis and errors in treatment tactics;  
performance of diagnostic tests stipulated by clinical protocols;  
carrying out diagnostic tests with high, unjustified risk for the patient's health, justification of diagnostic tests not included in clinical protocols;  
carrying out diagnostic tests that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment time and the cost of treatment;  
3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalisation, investigations conducted at the pre-hospital stage are

also taken into account), which are assessed according to the following criteria:

the diagnosis is absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis is correct but incomplete, the leading pathological syndrome is not highlighted with the highlighted complications, comorbidities affecting the outcome are not recognised ;

the diagnosis of the main disease is correct, but comorbidities affecting the outcome of treatment are not diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease, asymptomatic course of the associated disease, rare complications and associated diseases) are reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) is assessed;

4) timeliness and quality of consultations of specialised specialists, which are assessed according to the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
timely consultation, failure to take the consultant's opinion into account when making the diagnosis partially influenced the outcome of the disease;  
timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

consultant's opinion was wrong and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which shall be assessed according to the following criteria:

absence of treatment in the presence of indications;  
prescription of treatment in the absence of indications;  
prescription of ineffective treatment measures without taking into account the specifics of the course of the disease, concomitant diseases and complications;  
performance of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescription of drugs without proven clinical efficacy;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;

6) absence or development of complications after medical interventions, all complications that occurred , including those caused by surgical interventions ( delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;

7) the achieved result, which is assessed by the following criteria:

achievement of the expected clinical effect in compliance with the technology of medical services (assistance);

absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

absence of expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the peculiarities of the course of the disease, concomitant diseases, complications, prescription of drugs without proven clinical efficacy;

the presence of polypragmasy, which caused the development of undesirable consequences;

8) the quality of medical documentation, which is assessed by the availability, completeness and quality of records in the primary

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

| 1 | Availability of written voluntary consent of the patient or his/her legal representative for invasive interventions and therapeutic and diagnostic measures                                                                                                                                     |   |   |
| 2 | Availability of an opinion on the compliance of the health care entity to provide high-tech medical services                                                                                                                                                                                    |   |   |
| 3 | Availability of supporting documentation on the compliance of treatment and diagnostic measures with the recommendations of clinical protocols                                                                                                                                                  |   |   |
| 4 | Availability of supporting documentation of eligibility for selection and initiation of renal replacement therapy, specifically:<br>Indices (glomerular filtration rate);<br>- presence of hyperhydration, acidosis;<br>- potassium level;<br>- assessment of the patient's nutritional status) |   |   |
| 5 | Availability of supporting documentation of compliance with the indication for emergency extrarenal blood purification in patients with acute renal failure:<br>- Absence of urine;<br>- hyperkalemia;<br>- hyperhydration.                                                                     |   |   |
| 6 | Availability of supporting documentation that the haemodialysis machine shall comply with quality certificates, with sufficient life and capacity as stipulated by the country of manufacture                                                                                                   |   |   |
|   | Availability of supporting documentation on                                                                                                                                                                                                                                                     |   |   |

compliance with the algorithm of haemodialysis procedure:

- preparation of "artificial kidney" apparatus for work : testing and checking of AIP Atherogenic Index of Plasma apparatuses with control of ionic composition of dialysing solution on ionometer;
- preparation of the dialysis room nurse's workplace: laying out sterile layouts, preparation of fistula needles, dialyzer, solutions for filling the lines and dialyzer;
- assembly of the extracorporeal circuit ( blood pipelines, dialyser) with installation on the " artificial kidney" machine;
- filling and flushing of the extracorporeal circuit with physiological solution with anticoagulant;
- preparation of the patient: weighing on electronic scales with registration of interdialysis weight gain in the dialysis card, treatment of the skin surface with disinfectants at the site of puncture of vascular access ;
- connection of the patient to the "artificial kidney" device;
- setting the blood flow rate on the "artificial kidney" device;
- control of blood pressure, heart rate and pulse rhythmicity at least once an hour, with hourly registration of the results in the dialysis card;
- control of correctness of ultrafiltration volume (at the end of dialysis), with registration of results in the dialysis card;

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |

| 9  | Availability of a water treatment system and compliance with requirements for preparation of haemodialysis fluids, quality of solutions for haemodialysis and blood purification system                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 10 | Availability of a contract for provision of paid medical services in health care organisations.<br>Availability of documents establishing the fact of co-payment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |

Availability of documentation (internal orders, regulations, protocols, questionnaires, analyses) of the clinical audit by the Patient support service and internal expertise and its evaluation according to the following criteria:

1) quality of anamnesis collection, which is assessed according to the following criteria:

absence of anamnesis collection;

Completeness of anamnesis collection;

availability of data on past, chronic and hereditary diseases, performed haemotransfusions, tolerance of medicines, allergological status;

development of complications as a result of tactical errors made during treatment and diagnostic measures due to poor quality anamnesis collection;

2) completeness and validity of diagnostic tests, which are evaluated according to the following criteria:

absence of diagnostic measures;

incorrect conclusion or absence of a conclusion based on the results of diagnostic investigations, which led to incorrect diagnosis and errors in treatment tactics;

performance of diagnostic tests stipulated by clinical protocols;

carrying out diagnostic tests with high, unjustified risk for the patient's health,

justification of diagnostic tests not included in clinical protocols;  
carrying out diagnostic tests that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment time and the cost of treatment;  
3) correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the conducted investigations (in case of planned hospitalisation, investigations conducted at the pre-hospital stage are also taken into account), which are assessed according to the following criteria:

the diagnosis shall be absent, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome determining the severity of the course of the disease has not been identified, comorbidities and complications have not been recognised;

the diagnosis shall be correct but incomplete, the leading pathological syndrome shall not be highlighted with the highlighted complications, comorbidities affecting the outcome are not recognised

;

the diagnosis of the main disease shall be correct, but comorbidities affecting the outcome of treatment shall not be diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the main disease,

asymptomatic course of the associated disease, rare complications and associated diseases) shall be reflected in the results of the expertise. The impact of incorrect and (or) untimely diagnosis on the subsequent stages of medical services (care) is assessed;

4) timeliness and quality of consultations of specialised specialists, which shall be assessed according to the following criteria:

lack of consultation, resulting in erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

timely consultation, failure to take the consultant's opinion into account when making the diagnosis partially influenced the outcome of the disease;

timely consultation, consultant's opinion was taken into account when making the diagnosis, failure to implement the consultant's treatment recommendation partially affected the outcome of the disease;

consultant's opinion was wrong and affected the outcome of the disease.

Availability of supporting documentation on the assessment of objectivity of the reasons for untimely consultation and the impact of untimely diagnosis on the subsequent stages of medical services (care);

5) volume, quality and validity of treatment measures, which shall be assessed according to the following criteria:

absence of treatment in the presence of indications;  
prescription of treatment in the absence of indications;  
prescription of ineffective treatment measures without taking into account the specifics of the course of the disease, concomitant diseases and complications;  
performance of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescription of drugs without proven clinical efficacy;  
unjustified deviation from the requirements of clinical protocols, the presence of polypragmasy, which led to the development of a new pathological syndrome and worsening of the patient's condition;  
6) absence or development of complications after medical interventions, all complications that occurred , including those caused by surgical interventions ( delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures are evaluated;  
7) the achieved result, which is evaluated according to the following criteria:  
achievement of the expected clinical effect in compliance with the technology of medical services (assistance);  
absence of clinical effect of therapeutic and preventive measures due to poor quality anamnesis collection and diagnostic tests;

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

|  | <p>8) consulting doctors of other departments on issues of practical anesthesiology and resuscitation;</p> <p>9) analysis of the efficiency of the department and the quality of medical care provided, development and implementation of measures to improve the quality of medical care</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:</p> <p>1) the quality of medical history collection, which is assessed according to the following criteria:</p> <p>lack of medical history;</p> <p>completeness of anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;</p> <p>the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;</p> <p>2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:</p> <p>lack of diagnostic measures;</p> <p>incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;</p> |  |  |

carrying out diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;

carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be taken into account), which are assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is

correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) shall be assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely , failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making the diagnosis , failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the

objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

- lack of treatment when indicated;
- prescribing treatment in the absence of indications;
- prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;
- implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems,
- prescribing medications without proven clinical effectiveness;
- unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which is assessed

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| 4 | the target population group : those at high risk of the disease and subject to mandatory annual fluorographic examination                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |
| 5 | Availability of supporting documentation on the organization of directly observed treatment rooms ( hereinafter referred to as DOT) in primary health care organizations for outpatient treatment. The patient shall receive and take medications in the DOT office under the supervision of a responsible medical professional. Once every 10 days, patients undergoing direct supervised treatment shall be examined by a primary care physician/clinic phthisiatrician, or more often if indicated. Patients living in rural areas shall be examined by a phthisiatrician once a month               |  |  |
| 6 | An assessment of the clinical condition of a patient receiving anti-tuberculosis treatment for the presence of adverse reactions and events shall be carried out daily by the attending physician or phthisiatrician, or a medical worker in the directly observed treatment room. A medical professional who has identified adverse reactions and events to a drug shall fill out a report card and make an entry in the patient's medical records. Primary information about adverse reactions and events shall be provided by the responsible person of the medical organization to the state expert |  |  |

|   |                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

| 14 | <p>Availability of daily examination by a phthisiatrician of patients in the hospital.</p> <p>When examining and prescribing additional diagnostic and therapeutic procedures by the doctor on duty, appropriate entries are made in the medical record. If the patient's condition worsens, the doctor on duty shall notify the head of the department and (or) the attending physician, agree on changes to the diagnostic and treatment process, and make an entry in the medical record (paper and (or) electronic version).</p> <p>An entry shall be made into the electronic version of the medical record no later than 24 hours from the moment the patient's condition changes.</p> <p>In emergencies, the frequency of recordings depends on the dynamics of the severity of the condition. Hospital doctor's notes shall reflect specific changes in the patient's condition and the need to adjust prescriptions, the rationale for the prescribed examination and treatment, the assessment and interpretation of the results obtained and the effectiveness of the treatment. Frequency of examination in case of emergency conditions shall be at least every 3 hours,</p> |  |  |

|  | <p>Availability of supporting documentation on compliance with the requirements for transfusion of blood components and in the event of complications:</p> <p>Before transfusion of blood components, the recipient shall be examined for markers of blood-borne infections HIV, hepatitis B and C, and after completion of treatment, the discharge summary indicates the need for re-examination for HIV and hepatitis B and C at the place of residence.</p> <p>Examination of recipients for HIV infection within the framework of the guaranteed volume of free medical care shall be carried out in state health care organizations</p>                                                                |  |

operating in the field of HIV prevention

The following information regarding the transfusion history shall be entered into the patient's medical record before the start of transfusion therapy:

the presence of previous transfusions, when and in connection with what; whether there were post-transfusion complications, pregnancies that resulted in the birth of children with hemolytic disease of the newborn.

If complications develop during a biological sample, during or after a transfusion, a detailed record(s) shall be made describing the recipient's condition, vital signs monitoring data, treatment methods and their effectiveness.

Immediate laboratory monitoring of the recipient's blood and urine shall be carried out.

Availability of examination of persons for clinical indications for HIV infection when identifying the following diseases, syndromes and symptoms:

- 1) enlargement of two or more lymph nodes lasting more than 1 month, persistent, generalized lymphadenopathy;
- 2) fever of unknown aetiology (persistent or recurrent for more than 1 month);
- 3) unexplained severe cachexia or severe nutritional disorders that do not respond well to standard treatment (in

children), unexplained weight loss of 10% or more ;

4) chronic diarrhoea for 14 days or more (in children), unexplained chronic diarrhoea lasting more than a month;

5) seborrheic dermatitis, itchy papular rash (in children);

6) angular cheilitis;

7) recurrent upper respiratory tract infections (sinusitis, otitis media, pharyngitis, tracheitis, bronchitis);

8) herpes zoster;

9) any disseminated endemic mycosis, deep mycoses (coccidioidosis, extrapulmonary cryptococcosis (cryptococcal meningitis), sporotrichosis, aspergillosis, isosporosis, extrapulmonary histoplasmosis, strongyloidiasis, actinomycosis);

10) pulmonary and extrapulmonary tuberculosis, including disseminated infection caused by atypical mycobacteria, except tuberculosis of peripheral lymph nodes;

11) hairy leukoplakia of the oral cavity, linear gingival erythema;

12) severe protracted recurrent pneumonia and chronic bronchitis that is not amenable to conventional therapy (two or more times during the year), asymptomatic and clinically pronounced lymphoid interstitial pneumonia;

13) sepsis, prolonged and recurrent purulent-bacterial

diseases of internal organs (pneumonia, pleural empyema, meningitis, meningoencephalitis, infections of bones and joints, purulent myositis, Salmonella septicemia (except Salmonella typhi), stomatitis, gingivitis, periodontitis);

14) Pneumocystis pneumonia;

15) infections caused by the herpes simplex virus, with damage to internal organs and chronic (lasting more than one month from the moment of illness) damage to the skin and mucous membranes, including the eyes;

16) cardiomyopathy;

17) nephropathy;

18) encephalopathy of unknown aetiology;

19) progressive multifocal leukoencephalopathy;

20) Kaposi's sarcoma;

21) neoplasms, including lymphoma (brain) or B-cell lymphoma;

22) toxoplasmosis of the central nervous system;

23) candidiasis of the oesophagus, bronchi, trachea, lungs, mucous membranes of the oral cavity and nose;

24) disseminated infection caused by atypical mycobacteria;

25) cachexia of unknown aetiology;

26) prolonged recurrent pyoderma that is not amenable to conventional therapy;

27) severe chronic inflammatory diseases of the female genital area of unknown aetiology;

28) invasive neoplasms of the female genital organs;

29) mononucleosis 3 months from the onset of the disease;

30) sexually transmitted infections (syphilis, chlamydia, trichomoniasis, gonorrhea, genital herpes, viral papillomatosis and others) with an established diagnosis;

31) viral hepatitis B and C, upon confirmation of the diagnosis;

32) extensive condylomas;

33) molluscum contagiosum with extensive rashes, giant disfiguring molluscum contagiosum;

34) primary dementia in previously healthy individuals;

35) patients with hemophilia and other diseases who systematically receive transfusions of blood and its components;

36) generalized cytomegalovirus infection

Availability of medical documentation on compliance with the following requirements when examining temporary disability, issuing a sheet and certificate of temporary disability (form № 001/y "Medical record of an inpatient", form 052/y "Medical record of an outpatient", stubs of sheets on temporary disability of patients, form № 025/y "Journal for recording the conclusions of the medical consultation commission", form № 029/y "Book of registration of sheets on temporary incapacity for work", form № 037/y "Certificate № \_\_\_\_\_ on temporary incapacity

for work of a student, college student, professional technical school, about illness, quarantine and other reasons for the absence of a child attending school, a preschool organization (underline as necessary)", form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

1) availability of an examination of the person and a record of data on his/her state of health in the medical record of an outpatient (inpatient), justifying the need for his/her temporary release from work;

2) issuance of a sheet and certificate of temporary disability on the day of discharge of persons during inpatient treatment (including day hospitals, rehabilitation centres) for the entire period of inpatient treatment;

3) closing the sheet and certificate of temporary disability with the date of discharge from the hospital if the person's ability to work is fully restored;

4) extension for persons who continue to be temporarily disabled for a period of time and a certificate of temporary disability for a period, taking into account the time required for his/her appearance to a medical worker at a clinic or calling a medical worker at home (but not more than one calendar day). For persons who received treatment outside their region of residence, the time required to arrive at their place of permanent residence shall

be taken into account (but not more than four calendar days);

5) issuance of a certificate of temporary disability for injuries received while under the influence of alcohol or drugs, as well as acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuing a sheet and certificate of temporary disability to persons suffering from mental illness, in case of untimely contact with a medical organization in the past days, upon the conclusion of the medical advisory commission of a psychoneurological dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

7) issuing a sheet and certificate of temporary disability to persons sent by court decision for a forensic medical or forensic psychiatric examination and recognized as disabled from the date of admission for the examination;

8) issuing simultaneously a sheet and a certificate of temporary incapacity for work to a person combining study with work

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:

1) the quality of medical history collection, which is assessed according to the following criteria:

lack of medical history;  
completeness of anamnesis collection;  
availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;  
the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;

2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:

lack of diagnostic measures  
;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;  
carrying out diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;

carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis,

taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be taken into account), which are assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) is assessed;

4) timeliness and quality of consultations of specialized

experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;  
the consultation was timely, but failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely, the consultant's opinion was taken into account when making the diagnosis, failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescribing medications without proven clinical effectiveness;

unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which is assessed according to the following criteria:

achieving the expected clinical effect while observing the technology for providing medical services (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic studies;

lack of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, and

suspected MN and a confirmed diagnosis of MN :

- 1) group Ia – patients with a disease suspicious for MN;
- 2) group Ib – patients with precancerous diseases;
- 3) group II – patients with MN who are subject to special treatment (surgical treatment, chemotherapy, radiation therapy, immune cell therapy);
- 4) group IIa – patients with early forms of MN subject to radical treatment;
- 5) group III – patients after radical treatment of a malignant tumour (practically healthy individuals);
- 6) group IV – patients with common forms of MN, subject to palliative or symptomatic treatment.

Based on the results of an in-depth examination of a patient in clinical group Ia, primary-level doctors remove suspicion of MN or transfer to the appropriate clinical groups:

- 1) if a pretumor disease is detected, the patient shall be transferred to clinical group Ib;
- 2) upon confirmation (verification) of the diagnosis of MN, the patient is taken for dynamic observation in clinical group II;
- 3) patients with advanced forms of MN that are not amenable to special treatment shall be transferred to clinical group IV.

Patients of clinical group Ib shall be subject to dynamic observation and rehabilitation by primary

health care and clinical care specialists in organizations providing medical care on an outpatient basis at the place of their attachment, carried out under the supervision of high-oncology risk groups in medical organizations; observation of high-oncology risk groups in primary health care organizations and consultative and diagnostic assistance.

In clinical group II, all primary patients with MN who are indicated for special treatment shall be observed, regardless of the stage of the disease, including patients with stage 4 MN, if there are indications for special treatment.

Transfer from clinical group II to group III shall be carried out after completion of the full course of special treatment upon receipt of diagnostically confirmed results of radical cure, as well as the absence of progression and recurrence of MN.

Medical dynamic observation of patients of clinical group III shall be carried out:

- 1) during the first year of the disease – once every three months;
- 2) during the second year of the disease – once every six months;
- 3) from the third year - once a year.

Dynamic observation of clinical group II by secondary-level specialists shall be carried out in

accordance with periodic clinical protocols, at least once every three months.

Patients from clinical group III shall be transferred to II with progression and relapse of MN.

Clinical group IV shall include patients with advanced forms of MN, with aggravating concomitant pathology that does not allow special treatment, and who are subject to palliative or symptomatic treatment.

Transfer from clinical group II to IV shall be carried out when the disease progresses during treatment.

Transfer from clinical group III to IV shall be carried out when the disease progresses during dynamic observation and the condition worsens, which does not allow for special treatment.

Patients of clinical group IV who need to receive palliative and symptomatic treatment shall be observed in the primary health care organization at the place of attachment. Patients of clinical group IV shall not be removed from the oncology register.

Patients with cancer shall be subject to lifelong medical dynamic observation in an organization providing medical care on an outpatient basis at the place of attachment - the primary level (III clinical group) and organizations providing oncological care at a secondary level (II

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |

|    | of pregnant women, persons who applied voluntarily and anonymously                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 17 | <p>Availability of supporting documentation on compliance with indications for hospitalization in a day hospital at outpatient healthcare organizations and hospitalization at home :</p> <ol style="list-style-type: none"> <li>1) exacerbation of chronic diseases that do not require round-the-clock medical supervision;</li> <li>2) active planned improvement of a group of patients with chronic diseases subject to dynamic monitoring;</li> <li>3) follow-up treatment of the patient the next day after a course of inpatient treatment for medical reasons;</li> <li>4) conducting medical rehabilitation courses in the second and third stages;</li> <li>5) palliative care;</li> <li>6) orphan diseases in children associated with a high risk of infectious complications and requiring isolation during seasonal viral diseases to receive regular enzyme replacement and antibacterial therapy.</li> </ol> <p>Compliance with the requirements for hospitalization in a day hospital in a 24-hour hospital:</p> <ol style="list-style-type: none"> <li>1) carrying out operations and interventions with special preoperative preparation and resuscitation support;</li> <li>2) conducting complex diagnostic studies that require special preliminary</li> </ol> |  |  |

preparation, and are also not available in outpatient healthcare organizations;

3) observation of patients whose treatment involves transfusion of blood products, intravenous infusions of blood-substituting fluids, specific hyposensitizing therapy, injections of potent drugs, intra-articular injections of drugs;

4) follow-up treatment the next day after hospital treatment if there are indications for early discharge after surgical treatment;

5) palliative care;

6) chemotherapy, radiation therapy, correction of pathological conditions that arose after specialized treatment for cancer patients

Availability of medical documentation on compliance with the following requirements when examining temporary disability, issuing a sheet and certificate of temporary disability (form № 001/y "Medical record of an inpatient", form 052/y "Medical record of an outpatient", stubs of sheets on temporary disability of patients, form № 025/y "Journal for recording the conclusions of the medical consultation commission", form № 029/y "Book of registration of sheets on temporary incapacity for work", form № 037/y "Certificate № \_\_\_\_\_ on temporary incapacity for work of a student, college student, professional technical school, about illness, quarantine and other

reasons for the absence of a child attending school, a preschool organization (underline as necessary)", form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

1) availability of an examination of the person and a record of data on his/her state of health in the medical record of an outpatient (inpatient), justifying the need for his/her temporary release from work;

2) issuance of a sheet and certificate of temporary disability on the day of discharge of persons during inpatient treatment (including day hospitals, and rehabilitation centres) for the entire period of inpatient treatment;

3) closing the sheet and certificate of temporary disability with the date of discharge from the hospital if the person's ability to work is fully restored;

4) extension to persons who continue to be temporarily disabled for a period of time and a certificate of temporary disability for a period, taking into account the time required for his/her appearance to a medical worker at a clinic or calling a medical worker at home (but not more than one calendar day). For persons who received treatment outside their region of residence, the time required to arrive at their place of permanent residence shall be taken into account (but not more than four calendar days);

5) issuance of a certificate of temporary disability for

injuries received while under the influence of alcohol or drugs, as well as acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuing a sheet and certificate of temporary disability to persons suffering from mental illness, in case of untimely contact with a medical organization in the past days, upon the conclusion of the medical advisory commission of a psychoneurological dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

7) issuing a sheet and certificate of temporary disability to persons sent by court decision for a forensic medical or forensic psychiatric examination and recognized as disabled from the date of admission for the examination;

8) issuing simultaneously a sheet and a certificate of temporary incapacity for work to a person combining study with work

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:

1) the quality of medical history collection, which is assessed according to the following criteria:  
lack of medical history;

completeness of anamnesis collection;  
availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;  
the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;

2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:

lack of diagnostic measures;  
incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;  
carrying out diagnostic studies provided for by clinical protocols;  
conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;  
carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the

pre-hospital stage shall be taken into account), which are assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) is assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous

interpretation of symptoms and syndromes that negatively affected the outcome of the disease;  
the consultation was timely , failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making the diagnosis , failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems,

prescribing medications without proven clinical effectiveness;  
unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which is assessed according to the following criteria:

achieving the expected clinical effect while observing the technology for providing medical services (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic studies;

lack of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, and prescription of medications without proven clinical effectiveness;

the presence of polypharmacy, which led to the development of undesirable consequences;

| 35 | <p>Availability of supporting documentation confirming compliance of the medical care provided with clinical protocols</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |
|    | <p>Availability of medical documentation on compliance with the following requirements when examining temporary disability, issuing a sheet and certificate of temporary disability (form № 001/y "Medical record of an inpatient", form 052/y "Medical record of an outpatient", stubs of sheets on temporary disability of patients, form № 025/y "Journal for recording the conclusions of the medical consultation commission", form № 029/y "Book of registration of sheets on temporary incapacity for work", form № 037/y "Certificate № _____ on temporary incapacity for work of a student, college student, professional technical school, about illness, quarantine and other reasons for the absence of a child attending school, a preschool organization (underline as necessary)",</p> |  |  |

form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

- 1) availability of an examination of the person and a record of data on his/her state of health in the medical record of an outpatient (inpatient), justifying the need for his/her temporary release from work;
- 2) issuance of a sheet and certificate of temporary disability on the day of discharge of persons during inpatient treatment (including day hospitals, and rehabilitation centres) for the entire period of inpatient treatment;
- 3) closing the sheet and certificate of temporary disability with the date of discharge from the hospital if the person's ability to work is fully restored;
- 4) extension to persons who continue to be temporarily disabled for a period of time and a certificate of temporary disability for a period, taking into account the time required for his/her appearance to a medical worker at a clinic or calling a medical worker at home (but not more than one calendar day). For persons who received treatment outside their region of residence, the time required to arrive at their place of permanent residence shall be taken into account (but not more than four calendar days);
- 5) issuance of a certificate of temporary disability for injuries received while under the influence of alcohol or drugs, as well as acute alcohol or drug

intoxication, for the entire period of temporary disability;

6) issuing a sheet and certificate of temporary disability to persons suffering from mental illness, in case of untimely contact with a medical organization in the past days, upon the conclusion of the medical advisory commission of a psychoneurological dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

7) issuing a sheet and certificate of temporary disability to persons sent by court decision for a forensic medical or forensic psychiatric examination and recognized as disabled from the date of admission for the examination;

8) issuing simultaneously a sheet and a certificate of temporary incapacity for work to a person combining study with work .

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:

1) the quality of medical history collection, which is assessed according to the following criteria:

lack of medical history;  
completeness of anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;

the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;

2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:

lack of diagnostic measures

;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics; carrying out diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;

carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be

taken into account), which are assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) is assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
the consultation was timely  
, failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion was taken into account when making the diagnosis  
, failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;  
implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescribing medications

without proven clinical effectiveness;  
unreasonable deviation from the requirements of clinical protocols, availability of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;  
6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;  
7) the achieved result, which is assessed according to the following criteria:  
achieving the expected clinical effect while observing the technology for providing medical services (assistance);  
lack of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic studies;  
lack of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, and prescription of medications without proven clinical effectiveness;  
the presence of polypharmacy, which led to the development of undesirable consequences;

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

|  | <p>8) the quality of medical documentation, which is assessed by the presence, completeness and quality of records in the primary medical documentation intended to record data on the health status of patients, reflecting the nature, volume and quality of medical care provided</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
|  | <p>Availability of supporting documentation on compliance with the following actions when conducting a pathological autopsy:</p> <p>1) conducting a pathoanatomical autopsy of corpses after doctors have declared biological death, after providing a medical record of an inpatient or a medical record of an outpatient with a written order from the chief physician or his/her deputy for the medical (medical) part of the health care organization on referral for a pathoanatomical autopsy;</p> <p>2) registration of the results of the pathological autopsy in the form of a pathological diagnosis (pathological diagnosis shall include: the main disease, a complication of the main disease, a concomitant disease, and a combined main disease);</p> <p>3) transfer of a medical record of an inpatient or a medical record of an outpatient with a pathological diagnosis included in it to the medical archive of a health care organization no later than ten working days after the pathological autopsy;</p> <p>4) conducting clinical and pathological analysis in</p> |  |  |

cases of death of patients in healthcare organizations;

5) pathoanatomical autopsy in case of suspicion of acute infectious diseases, oncological diseases, pathology of childhood, or death in connection with medical procedures to establish the cause of death and clarify the diagnosis of a fatal disease;

6) organization by the chief physician and head of the pathology department of virological (immunofluorescence) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathology bureau, the centralized pathology bureau and the pathology department of inpatient medical records for all those who died on the previous day no later than 10 a.m. on the day following the establishment of the fact of death;

8) registration:

- medical death certificate (preliminary, final) by a doctor specializing in "pathological anatomy (adult, pediatric)" on the day of the pathological autopsy;
- medical certificate of perinatal death (preliminary, final) by a doctor specializing in "pathological anatomy (adult, pediatric)" on the day of the pathological autopsy;

9) registration of the autopsy results in the form of a postmortem examination report;

10) availability of a written notification to the judicial

investigative authorities to resolve the issue of transferring the corpse for a forensic medical examination if signs of violent death are detected and the termination of the pathological examination of the corpse;

11) availability of a written notice from a doctor specializing in "pathological anatomy (adult, pediatric)" in the event of initial detection during autopsy of signs of an acute infectious disease, food or industrial poisoning, an unusual reaction to vaccination, as well as an emergency notification to the state sanitary and epidemiological service, immediately after their identification;

12) conducting a pathological examination of the placenta:

- in case of stillbirth;
- for all diseases of newborns identified at the time of birth;
- in cases suspected of hemolytic disease of the newborn;
- with early release of water and with dirty water;
- for maternal illnesses that occur with high fever in the last trimester of pregnancy;
- with obvious anomalies in the development or attachment of the placenta;
- if there is a suspicion of congenital anomalies of fetal development;
- in cases of preeclampsia, eclampsia

13) mandatory registration of a fetus weighing less than 500 grams with anthropometric data (

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |

with mental and behavioural disorders (MBD) for dynamic observation:

Group 1 of dynamic psychiatric observation - persons who, due to their mental state, are prone to socially dangerous actions, including those who have a risk of committing violent acts of a sexual nature against minors, as well as those who have committed especially dangerous acts in a state of insanity, and for whom the court has determined compulsory medical measures nature in the form of outpatient compulsory treatment;

Group 2 of dynamic psychiatric observation - persons with MBD with disabilities due to mental illness, except for mental health disorders indicated in diagnostic headings F8 and F9; persons diagnosed with F20 "Schizophrenia" within one year after diagnosis (in this case, if recognized as a person with a disability, he continues to be observed in group 2 of dynamic psychiatric observation);

2A – persons with frequent and severe exacerbations of psychotic symptoms, decompensations, requiring psychopharmacotherapy as part of free outpatient treatment, including persons with MBD indicated in diagnostic headings F8 and F9

2B – persons with stable conditions, with a moderately progressive course of the process and spontaneous remissions; dynamic narcological observation group -

persons prone to socially dangerous actions due to clinical manifestations of MBD caused by substance abuse.

1) MBD due to the use of psychoactive substances in persons sent by court decision to departments for compulsory treatment;

2) MBD due to the use of psychoactive substances in a person who, based on the conclusion of a forensic drug examination, was prescribed treatment by a court decision;

3) MBD due to the use of psychoactive substances, in persons sent from places of deprivation of liberty where compulsory medical measures were used;

4) MBD due to the use of psychoactive substances, after suffering a psychotic disorder due to the use of psychoactive substances in hospital treatment;

5) MBD due to the use of psychoactive substances in persons prone to socially dangerous actions;

6) MBD due to the use of psychoactive substances in persons who voluntarily consented to dynamic observation.

The persons specified in subparagraph 1) – 5) are taken for dynamic observation by the decision of the medical advisory commission.

Compliance with the periodicity and frequency of observation of persons with mental and behavioural disorders (diseases):

1 group of dynamic psychiatric observation - at least once a month

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |

case of written consent of the person with the MBD to take him for dynamic observation;

3) referral to a meeting of the medical advisory commission (hereinafter referred to as the MAC) to resolve the issue of establishing dynamic observation without his/her consent or his/her legal representative if a person with MBD or his/her legal representative refuses to voluntarily undergo dynamic observation;

1) when taking a person with MBD for dynamic observation, conducting an initial examination of the patient, determining the dynamic observation group, the frequency of examinations, the need to organize the provision of special social services in the field of healthcare, drawing up an individual treatment plan, an individual rehabilitation program and other measures taking into account an individual approach, entering data in electronic information systems (hereinafter referred to as EIS) according to the form of accounting documentation in the field of healthcare

2) 5) conducting periodic examinations and evaluating the results of diagnostic studies, conclusions and recommendations of specialized experts;

6) monitoring and control of the effectiveness of treatment, rehabilitation (habilitation) measures, making adjustments if necessary;

7) registration of documents and referrals for medical and social examination, medical and social rehabilitation, inpatient replacement, inpatient treatment, including compulsory treatment if there are appropriate indications;

8) referral to consultation with specialized healthcare specialists, necessary laboratory and instrumental examinations, examination by a psychologist, consultation with a social worker and other specialists;

9) visiting a person with MBD at their place of residence;

10) implementation of continuity of levels, conditions and types of medical and social care.

Availability of an individual treatment plan and rehabilitation program for persons after discharge from an organization providing medical assistance in the field of mental health, except for those discharged by court order as having been cured ahead of schedule.

During maintenance treatment for people with MBD, a psychiatrist (narcologist) draws up an individual treatment plan and an individual rehabilitation program.

An individual treatment plan and an individual rehabilitation program shall include:

1) diagnostic methods: analysis of surfactant content in biological fluids and tissues of the body, testing for HIV,

experimental psychological diagnostics, determination of quality of life and social functioning, clinical and biochemical diagnostics, neurophysiological diagnostics;

2) drug therapy: psychopharmacotherapy, symptomatic therapy, therapy for comorbid pathology, antagonistic therapy using opioid receptor blockers;

3) advisory methods: medical, psychological and social counselling for persons dependent on psychoactive substances and codependent persons;

4) training methods: motivational training for the continuation of supportive anti-relapse therapy, for the formation of adaptive skills and stress resistance, for the formation of the properties of psychological resistance to re-involvement in addiction to psychoactive substances;

5) psychotherapeutic techniques: individual and group psychotherapy for persons dependent on psychoactive substances, individual express psychotherapy for persons dependent on psychoactive substances who are in a state of breakdown.

Availability of supporting documentation about the provision of primary health care by a doctor, if a person with MBD is suspected or identified, except for MBD requiring the provision of emergency and emergency medical and social care:

1) patient identification;

- 2) diagnostic measures according to clinical protocols;
- 3) establishes a diagnosis and carries out treatment measures for medical treatment according to the International Classification of Diseases, 10th revision (hereinafter referred to as ICD-10), which are within the competence of the primary care physician. If a person is suspected of having a diagnosis of MBD according to ICD-10, which is not within their competence, the primary health care doctor shall refer him/her to the MHC (Mental Health Center) or PMHC (Primary Mental Health Center) at his/her territorial location;
- 4) in the case of establishing diagnoses of borderline MBD that are within the competence of a primary health care physician for the first time in the current year - sending information to the MHC or PMHC at the territorial attachment about this patient, indicating passport data (last name, first name, patronymic (if any), individual identification number (hereinafter referred to as IIN), residential address), diagnosis and date of diagnosis, for entering data into the electronic information system (hereinafter referred to as EIS) no later than 5 working days from the date of diagnosis;
- 5) carrying out activities when identifying a person at risk of committing suicide who applied independently, or when

| 9 | <p>Availability of supporting documentation on the implementation of the following measures by a psychiatric doctor of the MHC or PMHC when applying to a person who was previously on dynamic observation with MBD and was deregistered in the EIS , indicating the reason for the removal, except for " recovery, persistent improvement":</p> <ol style="list-style-type: none"> <li>1) patient identification;</li> <li>2) diagnostic measures according to clinical protocols;</li> <li>3) resolving the issue of dynamic observation, as well as termination of dynamic observation;</li> <li>4) in the absence of criteria for admission to dynamic observation, registration of a referral to the MAC to resolve the issue of removal from dynamic observation, indicating the reason for removal in the EIS.</li> </ol> |  |  |
|   | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:</p> <ol style="list-style-type: none"> <li>1) the quality of medical history collection, which is assessed according to the following criteria:</li> </ol> <p>lack of medical history;</p>                                                                                                                                                                                                                                                                                                                                                                       |  |  |

completeness of anamnesis collection;  
availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;  
the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;

2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:

lack of diagnostic measures ;  
incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;  
carrying out diagnostic studies provided for by clinical protocols;  
conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;  
carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be

taken into account), which are assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) is assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

- lack of consultation, which led to an erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
the consultation was timely  
, but failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion was taken into account when making the diagnosis  
, failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;  
implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescribing medications

without proven clinical effectiveness;  
unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which is assessed according to the following criteria:

achieving the expected clinical effect while observing the technology for providing medical services (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic studies;

lack of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, and prescription of medications without proven clinical effectiveness;

the presence of polypharmacy, which led to the development of undesirable consequences;

|                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |

the Central Clinical Hospital and multidisciplinary city (regional) hospitals, the following types of observation shall be expected:

1) general surveillance regime - round-the-clock surveillance without restriction of movement in the department. The general regimen for patients shall be established when:

absence of danger to yourself and others;

ability to maintain personal hygiene without assistance;

2) partial hospitalization mode - the possibility of staying in the department during the day or at night, taking into account the need for its adaptation to out-of-hospital conditions, as well as the possibility of carrying out work activities against the background of treatment and control of symptoms of MBD for resocialization. The partial hospitalization regime shall be established by the decision of the medical commission (hereinafter referred to as the MC) consisting of two doctors when:

absence of danger to oneself and others;

ability to maintain personal hygiene without assistance;

stabilization of mental state, requiring daily, but not round-the-clock monitoring and control;

3) medical leave regime - the possibility of being outside the department for several hours to several days to gradually adapt to out-of-hospital conditions, resolve everyday and social

issues, as well as evaluate the achieved therapeutic effect. The regime of medical leave shall be established by the decision of the Internal Committee consisting of two doctors and shall be provided when :

absence of danger to yourself and others;  
ability to maintain personal hygiene without assistance;  
stabilization of mental state that does not require daily monitoring.

4) enhanced surveillance regime - round-the-clock surveillance and restriction of movement outside the department. An enhanced monitoring regime shall be established for patients with:

acute MBD that does not pose a danger to oneself or others;  
ability to maintain personal hygiene without assistance;  
the absence of a mental or somatic disorder requiring a different regime of observation and maintenance;

5) strict observation regime - round-the-clock continuous observation in the observation ward, constant accompaniment by medical personnel in the department and outside it. A strict regime for patients shall be established for patients with:

immediate danger to yourself and others;  
helplessness, that is, the inability to independently satisfy one's life needs in the absence of proper care;  
possible significant harm to health if the person is left unsupervised.

In the clinical inpatient departments of SPOIS, the following types of observation shall be assumed:

- 1) general observation regime - round-the-clock observation with movement in the department according to the daily routine, the opportunity to participate in occupational therapy outside the department;
- 2) enhanced surveillance regime - round-the-clock surveillance and restriction of movement within the department;
- 3) strict observation regime - round-the-clock continuous observation in the observation ward, constant accompaniment by medical personnel in the department and outside it

Availability of supporting documentation of compliance with the criteria for involuntary hospitalization:

Compulsory hospitalization in a hospital is permitted based on a court decision.

Forced hospitalization of a person in a hospital before a court decision is permitted only in cases in accordance with the law.

For each case of forced hospitalization without a court decision, the administration of an organization providing medical assistance in the field of mental health to persons with a mental, or behavioural disorder (disease), within forty-eight hours from the moment the person is admitted to the hospital, sends a written notification to the

prosecutor, and also informs the spouse), close relatives and (or) legal representatives if information about them is available.

A person's stay in a hospital forcibly continues only as long as the grounds for which the hospitalization was carried out persist.

A person hospitalized in a hospital forcibly during the first six months is subject to examination at least once a month by a commission of psychiatrists to decide on the extension of hospitalization. Extension of hospitalization for more than six months shall be carried out by a court decision based on an application from an organization providing medical care in the field of mental health to persons with mental and behavioural disorders (diseases), on the need to extend the period of compulsory hospitalization and treatment, to which is attached the conclusion of a commission of psychiatrists.

Availability of supporting documentation of compliance with the conditions of discharge.

Discharge from inpatient clinical departments shall be carried out upon the patient's recovery or improvement in his/her mental state when no further inpatient treatment is required, as well as upon completion of the test, examination, safety measures, compulsory medical measures that were

the basis for placement in the hospital.

Discharge of a patient who is in inpatient clinical departments voluntarily shall be made upon his/her application, the application of his/her legal representative, or by the decision of his/her attending physician.

The discharge of a patient to whom, by a court ruling, compulsory medical measures and security measures have been applied, shall be carried out only in accordance with a court ruling that has entered into force.

A patient hospitalized in an inpatient clinical department voluntarily shall be refused discharge if the MAC has established grounds for involuntary hospitalization

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:

1) the quality of medical history collection, which is assessed according to the following criteria:

lack of medical history;  
completeness of anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;

the development of complications as a result of tactical errors made during

therapeutic and diagnostic measures due to poor quality history taking;

2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:

lack of diagnostic measures ;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;

carrying out diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;

carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be taken into account), which are assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome that determines

the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) shall be assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely, failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion  
was taken into account  
when making the diagnosis  
, failure to follow the  
consultant's treatment  
recommendations partially  
influenced the outcome of  
the disease;

The consultant's opinion  
was erroneous and  
influenced the outcome of  
the disease.

Availability of supporting  
documentation on the  
assessment of the  
objectivity of the reasons  
for untimely consultation  
and the impact of the  
untimely diagnosis on  
subsequent stages of the  
provision of medical  
services (assistance);

5) volume, quality and  
validity of treatment  
measures, which are  
assessed according to the  
following criteria:

lack of treatment when  
indicated;

prescribing treatment in the  
absence of indications;

prescribing ineffective  
treatment measures without  
taking into account the  
specific course of the  
disease, concomitant  
diseases and complications;

implementation of  
therapeutic measures not in  
full, without taking into  
account the functional state  
of organs and systems,  
prescribing medications  
without proven clinical  
effectiveness;

unreasonable deviation  
from the requirements of  
clinical protocols, the  
presence of polypharmacy,  
which led to the  
development of a new

pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which is assessed according to the following criteria:

achieving the expected clinical effect while observing the technology for providing medical services (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic studies;

lack of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, and prescription of medications without proven clinical effectiveness;

the presence of polypharmacy, which led to the development of undesirable consequences;

8) the quality of medical documentation, which is assessed by the presence, completeness and quality of records in the primary medical documentation intended to record data on the health status of patients, reflecting the nature,

|                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |

| 26 | <p>the examination and examination that served as the basis for placement in a day hospital.</p> <p>On the day the patient is discharged from the organization providing inpatient care, an epicrisis shall be drawn up, a copy of which is sent to the PMHC, MHC, at the patient's place of residence , for inclusion in the outpatient's medical record .</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
|    | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:</p> <p>1) the quality of medical history collection, which is assessed according to the following criteria:</p> <p>lack of medical history;</p> <p>completeness of anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance , and allergy status;</p> <p>the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;</p> <p>2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:</p> <p>lack of diagnostic measures ;</p> <p>incorrect conclusion or lack of conclusion based on</p> |  |  |

the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics; carrying out diagnostic studies provided for by clinical protocols; conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols; carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be taken into account), which are assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the

outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) shall be assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely , failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making the diagnosis , failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and

influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescribing medications without proven clinical effectiveness;

unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and

| 14 | Availability of supporting documentation on the implementation of pre-exposure and post-exposure prophylaxis among the population and key populations                                                                                                                                                                                                      |  |  |
|    | Availability of monitoring contacts on time.                                                                                                                                                                                                                                                                                                               |  |  |

Contacts shall be monitored in a healthcare organization that carries out activities in the field of HIV prevention. The duration of observation of contacts shall be established for:

- 1) children born from HIV-infected mothers – eighteen months;
- 2) medical workers in case of an emergency – three months;
- 4) recipients of donor biomaterial – three months;
- 5) sexual partners of HIV-infected persons and contacts for joint injection of drugs - until they receive a negative test result for HIV infection 3 months after the end of the contract ; if contact continues, contacts shall be examined for HIV infection 2 times a year;
- 6) persons from an intra-hospital outbreak - three months after discharge from a medical organization; If more than three months have passed since discharge, contacts undergo a one-time examination; if the result is negative, the observation shall be terminated.

Availability of dynamic monitoring and provision of antiretroviral therapy for HIV-infected persons.

The results of laboratory examinations of contacts are recorded in the outpatient card of an HIV-infected person registered at a dispensary (discordant couples). The HIV-infected person dynamically shall submit data on changes in marital status, last name, first name

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |

| 16 | <p>, patronymic (if any), and data on new contact persons for examination and observation, which shall be entered into the electronic tracking database.</p> <p>The provision of antiretroviral therapy to reduce the risk of HIV transmission from the moment of diagnosis shall be carried out according to the recommendations of clinical protocols for the diagnosis and treatment of HIV infection in adults and children, with the involvement of outreach services workers and social workers.</p>                                                                                                                                                                                                                                                                                                                                                                             |  |  |
|    | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:</p> <p>1) the quality of medical history collection, which shall be assessed according to the following criteria:</p> <ul style="list-style-type: none"> <li>lack of medical history;</li> <li>completeness of anamnesis collection;</li> <li>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;</li> <li>the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;</li> </ul> <p>2) completeness and validity of diagnostic studies, which shall be</p> |  |  |

assessed according to the following criteria:

- lack of diagnostic measures;
- incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;
- carrying out diagnostic studies provided for by clinical protocols;
- conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;
- carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be taken into account), which are assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) shall be assessed;

4) timeliness and quality of consultations of specialized experts, which are assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely , failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making the diagnosis , failure to follow the

consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;

implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems, prescribing medications without proven clinical effectiveness;

unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all

| 12 | <p>Compliance with requirements for medical examination of donors, safety and quality in the production of blood products for medical use</p>                                                                                                                   |  |  |
|    | <p>Availability of supporting documentation on compliance with the requirements of external</p>                                                                                                                                                                 |  |  |

|    |                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 13 | assessment of the quality of laboratory research measurements in reference laboratories                                                                                                                                                                                                                                                                                                          |  |  |
| 14 | Compliance with the requirements for incoming and daily in-laboratory quality control of reagents to confirm their activity and specificity.                                                                                                                                                                                                                                                     |  |  |
| 15 | Availability of a blood donor and its components questionnaire provided to the donor, which he/she fills out independently or with the participation of a medical registrar.                                                                                                                                                                                                                     |  |  |
| 16 | The following shall be subject to incoming control :<br>1) purchased materials ( containers for blood collection, reagents, test systems, disinfectants, instruments and other materials), the nomenclature of which shall be approved by the first head of the blood service organization;                                                                                                      |  |  |
| 17 | Compliance with requirements for medical examination of donors, safety and quality in the production of blood products for medical use                                                                                                                                                                                                                                                           |  |  |
|    | Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the conduct of a clinical audit by the Patient Support and Internal Expertise Service and its assessment according to the following criteria:<br>1) the quality of medical history collection, which is assessed according to the following criteria:<br>lack of medical history; |  |  |

completeness of anamnesis collection;  
availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, and allergy status;  
the development of complications as a result of tactical errors made during therapeutic and diagnostic measures due to poor quality history taking;

2) completeness and validity of diagnostic studies, which are assessed according to the following criteria:

lack of diagnostic measures ;  
incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;  
carrying out diagnostic studies provided for by clinical protocols;  
conducting diagnostic studies with a high, unjustified risk for the patient's health, the validity of conducting diagnostic studies that are not included in the clinical protocols;  
carrying out diagnostic studies that are not informative for making a correct diagnosis and lead to an unreasonable increase in treatment time and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies performed (for planned hospitalization, studies carried out at the pre-hospital stage shall be

taken into account), which shall be assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the international classification of diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome for the identified complications has not been identified, and concomitant diseases affecting the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and (or) untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. The impact of incorrect and (or) untimely diagnosis on subsequent stages of the provision of medical services (assistance) is assessed;

4) timeliness and quality of consultations of specialized experts, which shall be assessed according to the following criteria:

- lack of consultation, which led to an erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
the consultation was timely  
, failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion was taken into account when making the diagnosis  
, failure to follow the consultant's treatment recommendations partially influenced the outcome of the disease;

The consultant's opinion was erroneous and influenced the outcome of the disease.

Availability of supporting documentation on the assessment of the objectivity of the reasons for untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) volume, quality and validity of treatment measures, which are assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the specific course of the disease, concomitant diseases and complications;  
implementation of therapeutic measures not in full, without taking into account the functional state of organs and systems,  
prescribing medications

without proven clinical effectiveness;  
unreasonable deviation from the requirements of clinical protocols, the presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are assessed, including those caused by surgical interventions (late surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which is assessed according to the following criteria:

achieving the expected clinical effect while observing the technology for providing medical services (assistance);

lack of clinical effect of therapeutic and preventive measures due to poor quality history taking and diagnostic studies;

lack of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, and prescription of medications without proven clinical effectiveness;

the presence of polypharmacy, which led to the development of undesirable consequences;

|                                                                                                                                                                                                                                                                                   |  |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 8) the quality of medical documentation, which is assessed by the presence, completeness and quality of records in the primary medical documentation intended to record data on the health status of patients, reflecting the nature, volume and quality of medical care provided |  |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|

to the joint order of the Minister  
of Healthcare of the Republic of  
Kazakhstan  
dated November 15, 2018  
№ KR HCM-32 and  
the Minister of National Economy  
of the Republic of Kazakhstan  
dated November 15, 2018 № 70

## **Criteria for assessing the degree of risk in the sphere of circulation of medicines and medical devices Chapter 1. General provisions**

1. These Criteria for assessing the degree of risks in the sphere of circulation of medicines and medical devices (hereinafter - the Criteria) have been developed in accordance with subparagraph 16) of Article 10 of the Code of the Republic of Kazakhstan “On Public Health and Healthcare System”, paragraphs 5 and 6 of Article 141 and paragraph 1 Article 143 of the Entrepreneurial Code of the Republic of Kazakhstan, the Rules for the formation of risks assessment and management system by regulatory state bodies, approved by order of the acting Minister of National Economy of the Republic of Kazakhstan dated June 22, 2022 № 48 (registered in the Register of state registration of regulatory legal acts under № 28577) and by order of the acting Minister of National Economy of the Republic of Kazakhstan dated July 31, 2018 № 3 “On approval of the checklist’s form” (registered in the Register of state registration of regulatory legal acts under № 17371).

2. The following concepts are used in these Criteria:

- 1) a point – a quantitative measure of risk calculation;
- 2) data normalization – a statistical procedure that involves bringing values measured on various scales to a conventionally common scale;
- 3) risk - the probability of causing harm as a result of the activities of the subject of control of human life or health, the environment, the legitimate interests of individuals and legal entities, the property interests of the state, taking into account the severity of its consequences;
- 4) risks assessment and management system - the process of making management decisions aimed at reducing the probability of adverse factors occurring by distributing subjects (objects) of control according to risk levels for subsequent implementation of preventive control with a visit to the subject (object) of control and (or) inspections conducted for compliance with qualification or permitting requirements for issued permits, requirements for sent notifications in accordance with the Law of the Republic of Kazakhstan “On Permits and Notifications” (hereinafter - verification of compliance with the requirements) in order to limit the freedom of entrepreneurship to the minimum possible extent, while ensuring an acceptable level of risk in the relevant areas of activity, as well as those aimed at changing the level of risk for a specific subject (object) of control and (or) exemption of such subject (object) of control from preventive control with a visit to the subject (object) of control and (or) inspections for compliance with requirements;
- 5) objective criteria for assessing the degree of risk (hereinafter - objective criteria) - criteria for assessing the degree of risk used to select subjects (objects) of control depending on the degree of risk in a certain field of activity and not directly dependent on the individual subject (object) of control;
- 6) criteria for assessing the degree of risk - a set of quantitative and qualitative indicators related to the direct activities of the subject of control, features of industry development and factors influencing this development, allowing the subjects (objects) of control to be assigned to various degrees of risk;
- 7) subjective criteria for assessing the degree of risk (hereinafter - subjective criteria) - criteria for assessing the degree of risk used for selecting subjects (objects) of control and depending on the results of the activities of a particular subject (object) of control;
- 8) a checklist - a list of requirements for the activities of subjects (objects) of control, non-compliance with which entails a threat to human life and health, the environment, the legitimate interests of individuals and legal entities, the state;
- 9) sample set (sample) – a list of assessed subjects (objects) classified as a homogeneous group of subjects (objects) of control in a specific area of state control, in accordance with paragraph 2 of Article 143 of the Entrepreneurial Code of the Republic of Kazakhstan.

## **Chapter 2.**

### **The procedure for forming risks assessment and management system when conducting preventive control of subjects (objects) of control**

3. Risks management when carrying out preventive control with a visit to the subject (object) of control shall be formed by determining objective and subjective criteria, which are carried out in stages (multi-criteria analysis of decisions).

At the first stage, according to objective criteria, subjects (objects) of control are distributed to one of the following degrees of risk:

- 1) high risk;
- 2) medium risk;
- 3) low risk.

According to the indicators of the degree of risk according to subjective criteria, the subject (object) of control refers:

- 1) to a high degree of risk - with a risk degree indicator from 71 to 100 inclusive;
- 2) to an average degree of risk - with a risk degree indicator from 31 to 70 inclusive;
- 3) to a low degree of risk - with a risk degree indicator from 0 to 30 inclusive.

4. Criteria for assessing the degree of risk for conducting preventive control of subjects (objects) of control shall be formed by defining objective and subjective criteria.

#### **Paragraph 1. Objective criteria**

5. Determination of risk according to objective criteria shall be carried out depending on the specifics of the area in which state control is carried out, taking into account one of the following criteria:

- 1) level of danger (complexity) of the object;
- 2) the scale of severity of possible negative consequences, harm to the regulated area (region);
- 3) the possibility of an unfavorable incident for human life or health, the legitimate interests of individuals and legal entities, and the state.

6. After analyzing possible risks, subjects (objects) of control shall be distributed into three degrees of risk according to objective criteria (high, medium and low).

7. A high degree of risk includes subjects (objects) of control carrying out activities related to:

- 1) production of medicines;
- 2) manufacturing of medicines;
- 3) wholesale sales of medicines;
- 4) production of medical devices;
- 5) manufacturing of medical devices;

8. A medium degree of risk includes subjects (objects) of control:

- 1) subjects in the field of circulation of medicines and medical devices that carry out retail sales of medicines;
- 2) healthcare organizations providing outpatient care;
- 3) healthcare organizations providing inpatient care and (or) inpatient replacing care;
- 4) healthcare organizations providing emergency medical care and (or) air ambulance services;
- 5) healthcare organizations engaged in the procurement, preservation, processing, storage, and sale of blood and its components.

9. A low degree of risk includes subjects (objects) of control:

- 1) subjects in the field of circulation of medicines and medical devices carrying out retail sales of medicines and having a certificate of good pharmacy practice (GPP);
- 2) subjects (objects) of control carrying out pharmaceutical activities related to the wholesale and retail sale of medical devices.

10. For subjects (objects) of control classified as high and medium degree of risk according to objective criteria, an inspection for compliance with requirements, preventive control with a visit to the subject (object) of control, preventive control without a visit to the subject (object) of control and an unscheduled inspection shall be conducted.

11. For areas of activity of subjects (objects) of control classified as low degree of risk according to objective criteria, an inspection for compliance with the requirements of preventive control without a visit to the subject (object) of control and an unscheduled inspection shall be conducted.

## **Paragraph 2. Subjective criteria**

12. The determination of subjective criteria in the field of circulation of medicines and medical devices shall be carried out using the following stages:

- 1) formation of a database and collection of information;
- 2) analysis of information and risks assessment.

13. Formation of a database and collection of information are necessary to identify subjects (objects) of control.

The following sources of information shall be used to assess the degree of risk:

- 1) the results of previous inspections and preventive control with visits to subjects (objects) of control;

2) Note of the ILLI!

Subparagraph 2) shall be enforced from 01.12.2024 by joint order of the acting Minister of Healthcare of the Republic of Kazakhstan dated 24.05.2023 № 87 and Minister of National Economy of the Republic of Kazakhstan dated 24.05.2023 № 77.

3) Note the ILLI!

Subparagraph 3) shall be enforced from 01.12.2024 by joint order of the acting Minister

of Healthcare of the Republic of Kazakhstan dated 24.05.2023 № 87 and Minister of National Economy of the Republic of Kazakhstan dated 24.05.2023 № 77.

4) Note of the ILLI!

Subparagraph 4) shall be enforced from 01.12.2024 by joint order of the acting Minister of Healthcare of the Republic of Kazakhstan dated 24.05.2023 № 87 and Minister of National Economy of the Republic of Kazakhstan dated 24.05.2023 № 77.

5) Note of the ILLI!

Subparagraph 5) shall be enforced from 01.12.2024 by joint order of the acting Minister of Healthcare of the Republic of Kazakhstan dated 24.05.2023 № 87 and Minister of National Economy of the Republic of Kazakhstan dated 24.05.2023 № 77.

The following sources of information shall be used to assess the degree of risk when creating a schedule for requirements compliance:

- 1) the results of previous inspections and preventive control with visits to subjects (objects) of control;
- 2) the presence of adverse incidents that arose through the fault of the subject of control;
- 3) the presence and number of confirmed complaints and appeals;
- 4) results of preventive control without a visit to the subject (object) of control (final documents issued based on the results of preventive control without a visit to the subject (object) of control);

14. Based on available sources of information, data according to subjective criteria, subject to analysis and assessment shall be formed.

Analysis and assessment of subjective criteria allow us to concentrate the conduct of inspection for compliance with requirements and preventive control of the subject (object) of control in relation to the subject (object) of control with the greatest potential risk.
