At the same time, the data of subjective criteria previously taken into account and used in relation to a specific subject (object) of control or data for which the statute of limitations has expired in accordance with the legislation of the Republic of Kazakhstan shall not be used in the analysis and assessment.

In relation to subjects of control who have fully eliminated the violations issued based on the results of the previous preventive control with a visit and (or) inspection for compliance with the requirements, their inclusion in the formation of schedules and lists for the next period of state control shall not be allowed.

15. The degree of violations of requirements for subjects (objects) of control in the field of circulation of medicines and medical devices for compliance with qualification requirements shall be determined in accordance with Appendix 1 to these Criteria and the Degree of violation of requirements for subjects (objects) of control in the field of circulation of medicines and medical devices for conducting preventive control of subjects (objects) of control by information sources shall be determined in accordance with Appendix 2 to these Criteria.

16. Based on the priority of the sources of information used and the significance of indicators of the subjective criteria, in accordance with the procedure for calculating the risk degree indicator according to subjective criteria determined in the List of subjective criteria for determining the degree of risk according to subjective criteria in the field of circulation of medicines and medical devices in accordance with Article 138 of the Entrepreneurial Code of the Republic of Kazakhstan in relation to all subjects (objects) in accordance with Appendix 3 to these Criteria, the risk degree indicator shall be calculated according to subjective criteria.

17. Inspection for compliance with requirements and preventive control with a visit to the subject (object) shall be carried out depending on the purpose and types of activity of the objects, in accordance with checklists in the field of circulation of medicines and medical devices according to Appendices 16, 17, 18, 19, 20, 21 and 25 to this joint order.

18. For areas of activity of subjects (objects) of control classified as high-risk, inspections for compliance with requirements shall be determined by criteria, but shall be carried out no more than once a year.

For areas of activity of subjects (objects) of control classified as medium risk, inspections for compliance with requirements shall be determined by criteria, but shall be carried out no more than once every two years.

For areas of activity of subjects (objects) of control classified as low risk, the frequency of inspections for compliance with requirements shall be determined by criteria for assessing the degree of risk, but not more than once every three years.

### **Chapter 3. The procedure for calculating the degree of risk according to subjective criteria**

19. The calculation of the risk degree indicator according to subjective criteria (R) shall be carried out in an automated mode by summing up the risk degree indicator for violations based on the results of previous inspections and preventive control with visits to subjects (objects) of control (SP) and the risk degree indicator according to subjective criteria determined in accordance with paragraph 13 of these Criteria (SC), with subsequent normalization of the values given in the range from 0 to 100 points.

$R_{\text{interm}} = SP + SC$ , where

$R_{\text{interm}}$  - an intermediate indicator of the degree of risk according to subjective criteria,

SP – an indicator of the degree of risk for violations,

SC - an indicator of the degree of risk according to subjective criteria determined in accordance with paragraph 13 of these Criteria.

The calculation shall be made for each subject (object) of control of a homogeneous group of subjects (objects) of control of each sphere of state control. In this case, the list of assessed subjects (objects) of control, classified as a homogeneous group of subjects (objects) of control of one sphere of state control shall form a sample set (sample) for subsequent normalization of data.

20. Based on the data obtained from the results of previous inspections and preventive control with visits to subjects (objects) of control, an indicator of the degree of risk for violations shall be formed, assessed in points from 0 to 100.

If one gross violation is detected from any of the sources of information specified in paragraph 16 of these Criteria, the subject of control shall be assigned a risk indicator of 100 points and shall be subject to inspection for requirements compliance or preventive control with a visit to the subject (object) of control.

$SP_H$  – показатель незначительных нарушений;

If gross violations are not detected, the risk level indicator for violations shall be calculated by the total indicator for violations of a significant and minor degree.

When determining the indicator of significant violations, a coefficient of 0.7 shall be applied.

This indicator shall be calculated using the following formula:

$SP_s = (SP_2 \times 100 / SP_1) \times 0,7$ , where:

$SP_s$  – an indicator of significant violations;

$SP_1$  – required number of significant violations;

$SP_2$  – number of significant violations identified;

When determining the indicator of minor violations, a coefficient of 0.3 shall be applied.

This indicator shall be calculated using the following formula:

$SP_m = (SP_2 \times 100 / SP_1) \times 0,3$ , where:

$SP_m$  – an indicator of minor violations;

$SP_1$  – required number of minor violations;

$SP_2$  – number of minor violations identified;

The violation risk indicator ( $SP$ ) shall be calculated on a scale from 0 to 100 points and shall be determined by summing the indicators of significant and minor violations according to the following formula:

$SP = SP_s + SP_m$ , where:

$SP$  – an indicator of the risk degree for violations;

$SP_s$  – an indicator of significant violations;

$SP_m$  - an indicator of minor violations.

The resulting value of the risk degree indicator for violations shall be included in the calculation of the risk degree indicator based on subjective criteria.

21. The calculation of the risk degree indicator according to subjective criteria determined in accordance with paragraph 16 of these Criteria shall be made on a scale from 0 to 100 points and shall be carried out using the following formula:

$$SC = \sum_{i=1}^n x_i * w_i, \text{ где}$$

$x_i$  – an indicator of subjective criterion,

$w_i$  – specific weight of the subjective criterion indicator  $x_i$ ,

$n$  – number of indicators.

The resulting value of the risk degree indicator according to subjective criteria, determined in accordance with paragraph 13 of these Criteria, shall be included in the calculation of the risk degree indicator according to subjective criteria.

22. The R indicator values calculated for subjects (objects) shall be normalized to a range from 0 to 100 points. Data normalization shall be carried out for each sample set (sample) using the following formula:

$$R = \frac{R_{\text{норм}} - R_{\text{min}}}{R_{\text{max}} - R_{\text{min}}},$$

$R$  – risk degree indicator (final) according to the subjective criteria of an individual subject (object) of control,

$R_{\text{max}}$  – the maximum possible value on the risk degree scale according to subjective criteria for subjects (objects) included in one sample set (sample) (upper limit of the scale),

$R_{\text{min}}$  – the minimum possible value on the risk degree scale according to subjective criteria for subjects (objects) included in one sample set (sample) (lower limit of the scale),

$R_{\text{interm}}$  - an intermediate indicator of the degree of risk according to subjective criteria, calculated in accordance with paragraph 16 of these Criteria.

Appendix 1  
to the criteria for assessing  
the degree of risk in the area  
of circulation of medicines  
and medical devices

### **The degree of violation of requirements for subjects (objects) of control in the sphere of circulation of medicines and medical devices for compliance with qualification requirements**

| № | Requirements                                                                                           | Degree of violations |
|---|--------------------------------------------------------------------------------------------------------|----------------------|
|   | Compliance of a premise or building under the right of ownership or lease or trust management of state |                      |

|      | bubbles, accidentally present in solutions)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |       |
| 189. | Carrying out primary and secondary inspection for mechanical inclusions during the manufacturing process of solutions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | gross |
| 190. | Carrying out chemical control according to the following indicators :<br>1) authenticity, purity tests and acceptable limits of impurities (qualitative analysis);<br>2) quantitative determination (quantitative analysis) of medicinal substances included in its composition                                                                                                                                                                                                                                                                                                                                          | gross |
| 191. | Providing a complete chemical analysis of purified water                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | gross |
| 192. | Exercising control during release by checking all manufactured medicinal products, including homeopathic ones, for compliance with:<br>1) packaging of medicinal products based on the physical and chemical properties of the medicinal substances included in them;<br>2) the doses indicated in the prescription, including the highest single doses, the highest daily doses of medicinal products depending on the patient's age;<br>3) numbers on the prescription and numbers on the label;<br>4) the patient's name on the receipt, name on the label and prescription;<br>5) registration of medicinal products | gross |
| 193. | Ensuring registration of the results of control of individual stages of manufacturing solutions for injections and infusions in the logbook for recording the results of control of individual stages of manufacturing solutions for injections and infusions                                                                                                                                                                                                                                                                                                                                                            | gross |
| 194. | Availability of a range of concentrates, semi-finished products and in-pharmacy procurement of medicinal products manufactured in a pharmacy, annually approved by an accredited testing laboratory, with                                                                                                                                                                                                                                                                                                                                                                                                                | gross |

|      |                                                                                                                                                                                                                                                                                                                                                                   |             |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
|      | which an agreement on control and analytical services has been concluded                                                                                                                                                                                                                                                                                          |             |
| 195. | Availability of a specialist certificate in the field of healthcare for each pharmaceutical worker                                                                                                                                                                                                                                                                | gross       |
| 196. | Availability of a state license for pharmaceutical activities and appendices for subtypes of activity or notification of the start of activity. Compliance with the types and subtypes of activities declared upon receipt of the state license and its appendix                                                                                                  | gross       |
| 197. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for medical devices), indicated in the labeling of their packages | gross       |
| 198. | Ensuring the safety, storage conditions of various groups of medicines and medical devices and their handling by complying with the requirements for the design, arrangement, composition, size of areas, equipment of premises (zones) for storing medicines and medical devices and their operation, ensuring safety                                            | gross       |
| 199. | Observance of separate storage of medicines and medical devices from other products in order to avoid any impact on them, protection from the negative effects of light, temperature, moisture and other external factors                                                                                                                                         | gross       |
| 200. | Keeping records of the expiration dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                             | minor       |
| 201. | Carrying out storage of medicines and medical devices in designated and clearly marked storage zones                                                                                                                                                                                                                                                              | significant |
|      | Providing the storage room, including the refrigeration room (chamber), with appropriate equipment for monitoring temperature, air humidity (                                                                                                                                                                                                                     |             |

|      |                                                                                                                                                                                                                                                                                                                                              |       |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 202. | thermometers, hygrometers, other types of instruments), and their location on the internal walls of the premises away from heating devices based on the results of testing zones of temperature fluctuations for cold and warm season                                                                                                        | gross |
| 203. | Compliance with separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, physical state, physicochemical properties, exposure to various environmental factors                                                                                                       | gross |
| 204. | Availability of an isolated place for storing medicines, the decision on the circulation of which has not yet been made, expired, returned, withdrawn from the category suitable for supply, in relation of which there are suspicions of falsification, recalled and rejected                                                               | gross |
| 205. | Ensuring protection from the effects of weather conditions in the zones of acceptance and shipment. Availability of equipment in the zones of acceptance and shipment (ventilation/ air conditioning system, hygrometer, thermometer), equipment for cleaning containers. Availability of an equipped control zone for the received products | gross |
| 206. | Separation of acceptance, quarantine, defective, shipping and storage zones. Availability of a room in which medicines are stored in quarantine, clearly marked and with limited access                                                                                                                                                      | gross |
| 207. | Availability of common fireproof buildings with insulation by fireproof walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, providing the premises with supply and exhaust ventilation                                                                | gross |
|      | Storage of flammable medicines separately from other medicines: provision with fireproof and stable racks and pallets, storage of                                                                                                                                                                                                            |       |

|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |       |

|      | Instrument readings shall be recorded throughout transportation and shall be documented                                                                                                                                                                                                                                                                                                                                              |       |
| 256. | Ensuring the protection of medicines and medical devices from environmental factors (precipitation, dust, sunlight, mechanical damage). Medicines and medical devices prepared for transportation shall be packaged in group containers (cardboard boxes or stacks) with subsequent packaging in transport packaging (boxes, cartons, wrapping paper) that meets the requirements of the regulatory document                         | gross |
| 257. | Ensuring the execution of shipping documents containing the following information for each item, batch (series) of products:<br>name;<br>dosage (for a medicine);<br>packaging;<br>quantity, unit price;<br>sum;<br>series;<br>best before date;<br>number and validity period of the certificate of conformity (for a medicine or medical device).<br>Corrections, additions, and blots in shipping documents shall not be allowed. | gross |
| 258. | Compliance with the maximum price for the trade name of a medicine during wholesale sales                                                                                                                                                                                                                                                                                                                                            | gross |
| 259. | Availability of a specialist certificate in the field of healthcare for each pharmaceutical worker                                                                                                                                                                                                                                                                                                                                   | gross |
| 260. | Availability of a state license for pharmaceutical activities and appendices for subtypes of activity or notification on the start of activity<br>.<br>Compliance with the types and subtypes of activities declared upon receipt of the state license and its appendix                                                                                                                                                              | gross |
|      | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality                                                                                                                                                                                                                                                             |       |

|      |                                                                                                                                                                                                                                                                                                                                                                                   |             |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 261. | and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for medical devices), indicated in the labeling of their packages                                                                                                                                                                                          | gross       |
| 262. | Ensuring the safety, storage conditions of various groups of medicines and medical devices and their handling by complying with the requirements for the design, arrangement, composition, size of areas, equipment of premises (zones) for storing medicines and medical devices and their operation, ensuring safety                                                            | gross       |
| 263. | Observance of separate storage of medicines and medical devices from other products in order to avoid any impact on them, protection from the negative effects of light, temperature, moisture and other external factors                                                                                                                                                         | gross       |
| 264. | Keeping records of the expiration dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                             | minor       |
| 265. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                                           | significant |
| 266. | Providing the storage room, including the refrigeration room (chamber), with appropriate equipment for monitoring temperature, air humidity (thermometers, hygrometers, other types of instruments) and their location on the internal walls of the premises away from heating devices based on the results of testing zones of temperature fluctuations for cold and warm season | gross       |
| 267. | Compliance with separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, physical state, physicochemical properties, exposure to various environmental factors                                                                                                                                            | gross       |
|      | Availability of an isolated place for storing medicines, the decision on the circulation of which has not yet been made, expired, returned,                                                                                                                                                                                                                                       |             |

|      |                                                                                                                                                                                                                                                                                                                                                                                                                        |       |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 268. | withdrawn from the category suitable for supply, for which there are suspicions of falsification, recalled and rejected                                                                                                                                                                                                                                                                                                | gross |
| 269. | Ensuring protection from the effects of weather conditions in the zones of acceptance and shipment. Availability of equipment in the zones of acceptance and shipment (ventilation/ air conditioning system, hygrometer, thermometer), equipment for cleaning containers. Availability of an equipped control zone for the received products                                                                           | gross |
| 270. | Separation of acceptance, quarantine, defective, shipping and storage zones. Availability of a room in which medicines shall be stored in quarantine, with clear markings and limited access.                                                                                                                                                                                                                          | gross |
| 271. | Availability of common fireproof buildings with insulation by fireproof walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, providing the premises with supply and exhaust ventilation                                                                                                                                          | gross |
| 272. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and at least 1.2 meters high                                                                                                                                                      | gross |
| 273. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                                                                                                                                                 | gross |
| 274. | Compliance with the storage of flammable and combustible liquid medicines that should not be stored:<br>1) in a completely filled container, the degree of filling is not more than 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, which are filled to no more than 95 percent of the volume;<br>2) with mineral acids (sulfuric, nitric and other acids), compressed and | gross |

|      |                                                                                                                                                                                                              |             |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
|      | liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with organic substances (potassium chlorate, potassium permanganate)                                  |             |
| 275. | Compliance with isolated storage of calcium hypochloride, taking into account its properties                                                                                                                 | gross       |
| 276. | Compliance with the storage of flammable liquids with constant monitoring of the containers condition, their tightness and serviceability                                                                    | gross       |
| 277. | Implementation of measures during storage of explosive drugs against contamination by dust                                                                                                                   | gross       |
| 278. | Compliance with separate storage of explosive and flammable medicines containing acids and alkalis                                                                                                           | gross       |
| 279. | Ensuring the protection of cylinders with oxygen and flammable gases from heat sources, contact with oil and other fatty substances, and their storage in isolated rooms or under canopies                   | gross       |
| 280. | Compliance with the conditions for storing dressings in a dry, ventilated area in cabinets, drawers, on racks, pallets, shelves, in conditions that ensure cleanliness                                       | gross       |
| 281. | Compliance with the storage conditions of medical instruments, devices, instruments, equipment in dry heated rooms at room temperature, with a relative air humidity not exceeding 65 percent                | gross       |
| 282. | Compliance with the requirements for finishing premises (areas) for storing medicines and ensuring the cleanliness of premises and storage equipment                                                         | significant |
| 283. | Ensuring protection from insects, rodents or other animals and availability of a preventive pest control program                                                                                             | minor       |
|      | Separation of rest rooms, dressing rooms, showers and toilets for workers from storage rooms (zones). Food products, drinks, tobacco products, and medicines for personal use shall not be stored in storage |             |

| 5.  | Compliance of substances, excipients, consumables and packaging materials with the registration dossier                                                                                                             |  |  |
| 6.  | Incoming control of raw materials (substances, auxiliary materials), materials, semi-finished products, components; intermediate control during the production process, control of finished pharmaceutical products |  |  |
| 7.  | Availability of a quality assurance system, documentation and control of its efficacy in production                                                                                                                 |  |  |
| 8.  | Ensuring registration of all technological and auxiliary operations during the production of a separate series of medicines and medical devices                                                                     |  |  |
| 9.  | Compliance with the requirements for maintaining documentation of all production processes and materials used in production, its storage order                                                                      |  |  |
| 10. | Compliance with stability testing, shelf-life establishment, and revalidation of medications .                                                                                                                      |  |  |
| 11. | Ensuring that the number of samples is sufficient for testing when necessary ( arbitration tests)                                                                                                                   |  |  |
| 12. | Availability of markings indicating the status of manufactured products, initial products, packaging materials                                                                                                      |  |  |
|     |                                                                                                                                                                                                                     |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                      |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 13. | Quality control of materials , intermediate products, finished products.                                                                                                                                                                                                                                                                                             |  |  |
| 14. | Maintaining of database of side effects of medicines and medical devices                                                                                                                                                                                                                                                                                             |  |  |
| 15. | Availability of a health specialist certificate for each pharmacy worker                                                                                                                                                                                                                                                                                             |  |  |
| 16. | Availability of a state license for pharmaceutical activities and of attachments for subtypes of activity or notification of the commencement of activity. Compliance with the types and subtypes of activities declared upon receipt of the state license and attachment to it                                                                                      |  |  |
| 17. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for the medical device), indicated in the labeling of their packages |  |  |
| 18. | Ensuring safety, storage conditions and handling of various groups of medicines and medical devices by complying with the requirements for design , arrangement, composition , size of the areas, equipment of premises ( areas) for storage of medicines and medical devices and their operation, ensuring the safety                                               |  |  |
|     | Observance of storing medicines and medical devices separate from other products to avoid any                                                                                                                                                                                                                                                                        |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                               |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 19. | impact on them, protection from negative impact of light, temperature, moisture and other external factors                                                                                                                                                                                                                                                                    |  |  |
| 20. | Keeping records of the expiry dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                             |  |  |
| 21. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                                       |  |  |
| 22. | Provision of storage premises, including a refrigerating room (chamber) with appropriate equipment for control of temperature, air humidity (thermometers, hygrometers, other types of devices) and their location on the internal walls of the premises away from heating devices based on the results of testing of temperature fluctuation zones for cold and warm seasons |  |  |
| 23. | Observance of separation during storage of all medicines and medical devices depending on the pharmacological group, administration method, aggregate state, physicochemical properties, exposure to various environmental factors                                                                                                                                            |  |  |
| 24. | Availability of isolated storage space for pending, expired, returned, withdrawn, presumably counterfeit, recalled and rejected medicinal products                                                                                                                                                                                                                            |  |  |
| 25. | Provision of weather protection in the receiving and discharge areas. Availability of equipment in receiving and discharge areas (ventilation/air conditioning system, hygrometer, thermometer),                                                                                                                                                                              |  |  |

|     |                                                                                                                                                                                                                                                                                               |  |  |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | container cleaning equipment. Availability of an equipped area for inspection of received products                                                                                                                                                                                            |  |  |
| 26. | Separation of acceptance, quarantine, defective, discharge and storage areas . Availability of a room in which medicines are stored in quarantine, clearly marked and with limited access                                                                                                     |  |  |
| 27. | Availability of common non-combustible buildings with insulation by non-combustible walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, provision of premises with supply and exhaust ventilation      |  |  |
| 28. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and 1.2 meters high                                      |  |  |
| 29. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                        |  |  |
|     | Compliance with the storage of flammable and combustible liquid medicines that should not be stored:<br>1) in a completely filled container, the degree of filling must be no more than 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, filled to |  |  |

|     |                                                                                                                                                                                                                                                                                                |  |  |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 30. | no more than 95 percent of the volume;<br>2) with mineral acids (sulfuric, nitric and other acids), compressed and liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with organic substances (potassium chlorate, potassium permanganate) |  |  |
| 31. | Compliance with isolated storage of calcium hypochloride, taking into account its properties                                                                                                                                                                                                   |  |  |
| 32. | Compliance with the storage of flammable liquids with constant monitoring of the condition of containers, their tightness and serviceability                                                                                                                                                   |  |  |
| 33. | Implementation of measures in the storage of explosive medicines against their contamination by dust                                                                                                                                                                                           |  |  |
| 34. | Compliance with separate storage of explosive and flammable medicines containing acids and alkalis                                                                                                                                                                                             |  |  |
| 35. | Ensuring protection of cylinders with oxygen and flammable gases from heat sources, contact with oil and other greasy substances, and their storage in isolated rooms or under sheds                                                                                                           |  |  |
| 36. | Observance of conditions of storing dressings in a dry ventilated area in cabinets, drawers, on racks, pallets, trays, in conditions ensuring cleanliness                                                                                                                                      |  |  |
| 37. | Compliance with the conditions of storing medical instruments, devices, appliances, equipment in dry heated                                                                                                                                                                                    |  |  |

| 22. | Ensuring that the results of control of individual stages of manufacturing solutions for injections and infusions are recorded in the log of control results of individual stages of manufacturing solutions for injections and infusions                                                                                                     |  |  |
| 23. | Availability of a nomenclature of concentrates, semi-finished products and intra-pharmacy preparation of medicinal products manufactured in the pharmacy, annually approved by an accredited testing laboratory with which a contract on control and analytical services has been concluded                                                   |  |  |
| 24. | Holding by each pharmacy worker of a health specialist certificate                                                                                                                                                                                                                                                                            |  |  |
| 25. | Availability of a state license for pharmaceutical activities and of attachments for subtypes of activity or notification of the commencement of activity. Compliance with the types and subtypes of activities declared upon receipt of the state license and attachment to it                                                               |  |  |
|     | Ensuring storage and transportation in accordance with the                                                                                                                                                                                                                                                                                    |  |  |

|     |                                                                                                                                                                                                                                                                                                                   |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 26. | conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for the medical device), indicated in the labeling of their packages         |  |  |
| 27. | Ensuring safety, storage conditions and handling of various groups of medicines and medical devices by complying with the requirements for design , arrangement, composition , size of areas, equipment of premises (areas) for storage of medicines and medical devices and their operation, ensuring the safety |  |  |
| 28. | Storage of medicines and medical devices separate from other products to avoid any impact on them, protection from negative impact of light, temperature, moisture and other external factors                                                                                                                     |  |  |
| 29. | Keeping records of the expiry dates of medicines and medical devices on paper or electronic medium                                                                                                                                                                                                                |  |  |
| 30. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                           |  |  |
| 31. | Provision of storage premises, including a refrigerating room ( chamber) with appropriate equipment for control of temperature, air humidity ( thermometers, hygrometers , other types of devices) and their location on the internal walls of the premises away from heating devices based on                    |  |  |

|     |                                                                                                                                                                                                                                                                                                     |  |  |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | the results of testing of temperature fluctuation zones for cold and warm seasons                                                                                                                                                                                                                   |  |  |
| 32. | Observance of separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, aggregate state, physicochemical properties , exposure to various environmental factors                                                              |  |  |
| 33. | Availability of isolated storage space for pending, expired, returned, withdrawn, presumably counterfeit, recalled and rejected medicinal products                                                                                                                                                  |  |  |
| 34. | Provision of weather protection in the receiving and discharge areas. Availability of equipment in receiving and discharge areas (ventilation/air conditioning system, hygrometer, thermometer), container cleaning equipment. Availability of an equipped area for inspection of received products |  |  |
| 35. | Separation of receiving, quarantine, defective, discharge and storage areas . Availability of a clearly labeled and restricted access quarantine room where medicines are stored .                                                                                                                  |  |  |
| 36. | Availability of common non-combustible buildings with insulation by non-combustible walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, provision of premises with supply and exhaust ventilation            |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 37. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and 1.2 meters high                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 38. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 39. | <p>Compliance with the storage of flammable and combustible liquid medicines that should not be stored:</p> <p>1) in a completely filled container, the degree of filling must be no more than 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, filled to no more than 95 percent of the volume;</p> <p>2) with mineral acids (sulfuric, nitric and other acids), compressed and liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with organic substances (potassium chlorate, potassium permanganate)</p> |  |  |
| 40. | Compliance with isolated storage of calcium hypochloride, taking into account its properties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 41. | Compliance with the storage of flammable liquids with constant monitoring of the condition of containers, their tightness and serviceability                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
|     | Implementation of measures in the storage of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |

|     |                                                                                                                                                                                                                                                                                 |  |  |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 42. | explosive medicines against their contamination by dust                                                                                                                                                                                                                         |  |  |
| 43. | Compliance with separate storage of explosive and flammable medicines containing acids and alkalis                                                                                                                                                                              |  |  |
| 44. | Ensuring protection of cylinders with oxygen and flammable gases from heat sources, contact with oil and other greasy substances, and their storage in isolated rooms or under sheds                                                                                            |  |  |
| 45. | Observance of storage conditions of dressings in a dry ventilated area in cabinets, drawers, on racks, pallets, trays, in conditions ensuring cleanliness                                                                                                                       |  |  |
| 46. | Compliance with the storage conditions of medical instruments, devices, appliances, equipment in dry heated rooms at room temperature, with relative humidity not exceeding 65 percent                                                                                          |  |  |
| 47. | Compliance with the requirements for interior finishing of premises (areas ) for storing medicines and ensuring cleanliness of storage premises and equipment                                                                                                                   |  |  |
| 48. | Providing protection against the entry of insects, rodents or other animals, and presence of preventive pest control program                                                                                                                                                    |  |  |
| 49. | Separation of rest rooms, dressing rooms, showers and toilets for employees from storage rooms (areas). Food, beverages, tobacco products, as well as medicines for personal use shall not be stored in storage rooms (areas). Employees working in the storage area shall have |  |  |

|   | the transfer of the patient to the doctor of the emergency department) from the moment of its arrival to the hospital, except in cases of emergency medical care                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 6 | <p>Availability of an entry in the medical documentation confirming the patient's admission to the hospital's emergency department, with an initial assessment and medical triage ( hereinafter referred to as medical triage) in a certain group, based on the patient's condition, his possible deterioration and the priority of emergency medical care.</p> <p>Medical triage is carried out continuously and in succession. Upon completion of the assessment, the patient is marked with the color of one of the sorting categories, in the form of a special color tag or a colored ribbon. According to medical triage, there are 3 groups of patients: the first group (red zone) – patients whose condition poses an immediate threat to life or who have a high risk of deterioration and require emergency medical care; the second group ( yellow zone) – patients whose condition poses a potential threat to health or may progress with the development of a situation requiring emergency medical care; the third group (green zone) – patients whose condition does not pose an immediate threat to life and health and does not require hospitalization.</p> |  |  |

|    | <p>Availability of an entry in the medical documentation (form №001/u "Inpatient medical record") confirming the daily examination of patients by the attending physician in</p>                                                                                                                                                                                                                                                                                                                                                  |  |  |

the hospital except weekends and holidays. During the examination and appointment of additional diagnostic and therapeutic manipulations by the doctor on duty, appropriate entries are made in the medical record . If the patient's condition worsens, the doctor on duty notifies the head of the department and (or) the attending physician, coordinates changes to the diagnosis and treatment process, and makes an entry in the medical record (paper and (or) electronic version). An entry is made in the electronic version of the medical record no later than one day after the patient's condition changes. In case of emergencies, the frequency of entries depends on the dynamics of the severity of the condition. The hospital doctor's records reflect specific changes in the patient's condition and the need for correction of prescriptions, justification for the prescribed examination and treatment, assessment and interpretation of the results obtained and the effectiveness of the treatment. Frequency of examination in case of emergency conditions at least every 3 hours, indicating the time of emergency care by hours and minutes

Availability of supporting medical documentation on compliance with the requirements for planned hospitalization:

| 25 | Availability of medical documentation ("Diary" insert sheet 2 to the medical record of inpatient patient form 001/u) confirming the control of the effectiveness of blood transfusion and its components                                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 26 | Maintaining forms of accounting documentation in the field of healthcare (form № 003/u "Form of accounting for the movement of blood, its components and diagnostic standards" on electronic and (or) paper media; Insert sheet 6 to the inpatient patient's medical record form 001/u "Pretransfusion epicrisis", "Protocol of transfusion of components", "Transfusion sheet", Form № 006/u "Registration form for blood transfusion, its components, preparations", Form № 007/u "Registration form for blood recipients and its components") on electronic and (or) paper media |  |  |
|    | Availability of supporting medical documentation on indications for admission to a day hospital at outpatient health organizations and to a hospital at home:<br>1) exacerbation of chronic diseases that do not require round-the-clock medical supervision;<br>2) active planned rehabilitation of a group of patients with chronic diseases subject to dynamic monitoring;<br>3) follow-up of the patient on the next day after the course of inpatient treatment for medical reasons;                                                                                           |  |  |

4) conducting medical rehabilitation courses of the second and third stages;  
5) palliative care;  
6) orphan diseases in children associated with a high risk of infectious complications and requiring isolation during seasonal viral diseases in order to receive regular enzymatic replacement and antibacterial therapy.

The indications for admission to a day hospital at a 24-hour hospital are:

1) performing operations and interventions with special preoperative preparation and intensive care support;  
2) conducting complex diagnostic studies that require special preliminary training, as well as those that are not available in outpatient healthcare organizations;  
3) observation of patients whose treatment is associated with blood transfusion, intravenous infusions of blood-substituting fluids, specific hyposensitizing therapy, injections of potent drugs, intra-articular injections of drugs;  
4) follow-up treatment the next day after inpatient treatment, if there are indications for early discharge after surgical treatment;  
5) palliative care;  
6) chemotherapy, radiation therapy, correction of pathological conditions that have arisen after specialized treatment for cancer patients

Availability of supporting medical documentation on

the examination of persons for clinical indications for HIV infection in the detection of the following diseases, syndromes and symptoms:

- 1) enlargement of two or more lymph nodes lasting more than 1 month, persistent, generalized lymphadenopathy;
- 2) fever of unknown etiology (persistent or recurrent for more than 1 month);
- 3) unexplained severe cachexia or severe eating disorders that do not respond well to standard treatment (in children), unexplained weight loss of 10% or more;
- 4) chronic diarrhea for 14 days or more (in children), unexplained chronic diarrhea lasting more than a month;
- 5) seborrheic dermatitis, itchy papular rash (in children);
- 6) angular cheilitis;
- 7) recurrent upper respiratory tract infections (sinusitis, otitis media, pharyngitis, tracheitis, bronchitis);
- 8) shingles;
- 9) any disseminated endemic mycosis, deep mycoses (coccidioidosis, extrapulmonary cryptococcosis (cryptococcal meningitis), sporotrichosis, aspergillosis, isosporosis, extrapulmonary histoplasmosis, strongyloidosis, actinomycosis);
- 10) pulmonary and extrapulmonary tuberculosis, including disseminated infection caused by atypical

mycobacteria, except tuberculosis of peripheral lymph nodes;

11) hairy leukoplakia of the oral cavity, linear erythema of the gums;

12) severe prolonged recurrent pneumonia and chronic bronchitis that do not respond to conventional therapy (multiplicity of two or more times during the year), asymptomatic and clinically apparent lymphoid interstitial pneumonia;

13) sepsis, prolonged and recurrent purulent-bacterial diseases of internal organs (pneumonia, pleural empyema, meningitis, meningoencephalitis, bone and joint infections, purulent myositis, salmonella septicemia (except *Salmonellatyphi*), stomatitis, gingivitis, periodontitis);

14) pneumocystis pneumonia;

15) infections caused by the herpes simplex virus, with damage to internal organs and chronic (lasting more than one month from the moment of the disease) damage to the skin and mucous membranes, including the eyes;

16) cardiomyopathy;

17) nephropathy;

18) encephalopathy of unknown etiology;

19) progressive multifocal leukoencephalopathy;

20) Kaposi's sarcoma;

21) neoplasms, including lymphoma (of the brain) or B-cell lymphoma;

22) toxoplasmosis of the central nervous system;

23) candidiasis of the esophagus, bronchi, trachea, lungs, mucous membranes of the mouth and nose;

24) disseminated infection caused by atypical mycobacteria;

25) cachexia of unclear etiology;

26) prolonged recurrent pyoderma that is not amenable to conventional therapy;

27) severe chronic inflammatory diseases of the female genital area of unclear etiology;

28) invasive neoplasms of the female genital organs;

29) mononucleosis 3 months after the onset of the disease;

30) sexually transmitted infections (syphilis, chlamydia, trichomoniasis, gonorrhea, genital herpes, viral papillomatosis, and others) with an established diagnosis;

31) viral hepatitis B and C, upon confirmation of the diagnosis;

32) extensive drainage warts;

33) a contagious mollusk with extensive rashes, a giant disfiguring contagious mollusk;

34) primary dementia in previously healthy individuals;

35) patients with hemophilia and other diseases who regularly receive blood transfusion and its components;

36) generalized cytomegalovirus infection

Availability of a contract for the provision of paid medical services in healthcare organizations.

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

|  | <p>Availability of an entry in the medical documentation confirming compliance with the requirements for the examination of temporary disability, the issuance of a sheet and a certificate of temporary disability (form № 001/u "Medical record of an inpatient patient", form 052/u "Medical record of an outpatient patient", extracts of sheets on temporary disability of patients, form № 025/u "Journal to record the conclusions of the medical advisory commission", form № 029/u "Book of registration of temporary disability sheets", form № 037/u "Certificate № _____ about the temporary disability of a student, student of college, vocational school, illness, quarantine and other reasons for the absence of a child attending school, preschool organization (please underline)", form № 038/u "Certificate № _____ of temporary disability" and others):</p> <p>1) availability of an examination of the person and a record of information about his state of health in the medical record of an outpatient (inpatient) patient, justifying the need for his temporary release from work;</p> <p>2) issuing a sheet and a certificate of temporary disability on the day of discharge of persons in inpatient treatment (including day hospitals, rehabilitation centers) for</p> |  |  |

the entire period of inpatient treatment;

3) completion of the sheet and the certificate of temporary disability by the date of discharge from the hospital if the persons' ability to work has been fully restored;

4) to persons who continue to be temporarily disabled the prolongation of the sheet and certificate of temporary disability for a period, taking into account the time required for his appearance to a medical worker of the polyclinic or to call a medical worker at home (but not more than one calendar day). For persons who have received treatment outside their region of residence, the time required to arrive at their place of permanent residence (but not more than four calendar days) is taken into account;

5) issuance of a certificate of temporary disability in case of injuries received under the influence of alcohol or drugs, as well as in case of acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuing a sheet and a certificate of temporary disability to persons suffering from mental illnesses in case of late treatment to a medical organization over the past few days according to the conclusion of the Medical Advisory Commission of a neuropsychiatric dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |

|  | <p>7) issuing a sheet and a certificate of temporary disability to persons sent by a court decision for a forensic medical or forensic psychiatric examination and recognized as unfit for work from the date of admission to the examination;</p> <p>8) issuing at the same time a sheet and a certificate of temporary disability to a person who combines training with work</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |
|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical certificates) on the conduct of a clinical audit by the Patient Support Service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of medical record collection, which is evaluated according to the following criteria: lack of medical record collection; completeness of medical record collection; availability of data on past, chronic and hereditary diseases, performed blood transfusions, drug tolerance, allergic status; development of complications due to tactical errors during therapeutic and diagnostic measures due to poor medical record collection;</p> <p>2) completeness and validity of diagnostic studies, which are evaluated according to the following criteria: lack of diagnostic measures; incorrect conclusion or lack of conclusion based on the results of diagnostic</p> |  |  |

studies, which led to incorrect diagnosis and errors in treatment tactics; conducting diagnostic studies provided for by clinical protocols; conducting diagnostic studies with a high, unjustified risk to the patient's health, the reasonability of conducting diagnostic studies that are not included in clinical protocols; conducting diagnostic studies that are uninformative for making a correct diagnosis and have led to an unjustified increase in the duration of treatment and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (during planned hospitalization, studies conducted at the pre-hospital stage are taken into account), which are evaluated according to the following criteria: no diagnosis, incomplete or incorrect, does not comply with the international classification of diseases; the leading pathological syndrome determining the severity of the disease is not identified, concomitant diseases and complications have not been identified; the diagnosis is correct, but incomplete, the leading pathological syndrome has not been identified, concomitant diseases affecting the outcome have not been identified; the diagnosis of the underlying disease is correct, but concomitant diseases affecting the outcome of

treatment have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of concomitant disease, rare complications and concomitant diseases) are reflected in the examination results. The impact of incorrect and/or untimely diagnosis on the subsequent stages of medical services (aid) is being assessed;

4) the timeliness and quality of consultations of profile specialists, which are evaluated according to the following criteria: lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease; timely consultation, failure to take into account the consultant's opinion when making a diagnosis partially affected the outcome of the disease; timely consultation, the consultant's opinion was taken into account when making a diagnosis, failure to comply with the consultant's recommendation on treatment partially affected the outcome of the disease; the consultant's opinion is erroneous and affected the outcome of the disease. Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact

of the untimely diagnosis on the subsequent stages of medical services (aid);

5) the volume, quality and reasonability of therapeutic measures, which are evaluated according to the following criteria: lack of treatment in the presence of indications; prescribing treatment in the absence of indications; prescribing ineffective therapeutic measures without taking into account the features of the course of the disease, concomitant diseases and complications; performing therapeutic measures incompletely, without taking into account the functional state of organs and systems, prescribing medicines without proven clinical effectiveness; unjustified deviation from the requirements of clinical protocols, the presence of polypragmasia, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are evaluated, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria: achieving the expected clinical effect while observing the technology of providing medical services (care);

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

|  | <p>lack of clinical effect of therapeutic and preventive measures due to poor medical record collection and diagnostic studies; the absence of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the features of the course of the disease, concomitant diseases, complications, prescribing medications without proven clinical efficacy; the presence of polypragmasia, which led to the development of undesirable consequences;</p> <p>8) the quality of medical records management, which is assessed by the availability, completeness and quality of records in primary medical records designed to record data on the health status of patients , reflecting the nature, volume and quality of medical care provided</p> |  |
|  | <p>Availability of documentation confirming compliance with the actions during the autopsy:</p> <p>1) conducting a pathoanatomical autopsy of corpses after the doctors have confirmed biological death, after providing the medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his deputy for the medical (medical) part of the healthcare organization to send for a pathoanatomical autopsy;</p> <p>2) registration of the results of the pathoanatomical autopsy in the form of a pathoanatomic diagnosis ( pathoanatomic diagnosis</p>                                                                                                                                                                |  |

includes: underlying disease, complication of the underlying disease, concomitant disease, combined underlying disease);

3) transfer of the inpatient patient's medical record or the outpatient patient's medical record with the pathoanatomic diagnosis entered in it to the medical archive of the healthcare organization no later than ten working days after the pathoanatomic autopsy;

4) conducting clinical and pathoanatomical analysis in cases of death of patients in healthcare organizations;

5) pathoanatomic autopsy in case of suspected acute infectious, oncological diseases, childhood pathology, death due to medical manipulations in order to establish the cause of death and clarify the diagnosis of a fatal disease;

6) organization by the chief physician and the head of the pathology department of virological (immunofluorescence) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathology bureau, the centralized pathology bureau and the pathology department of medical records of inpatient patients for all those who died in the previous day no later than 10 a.m. on the day following the establishment of the fact of death;

8) registration of: - a medical death certificate (preliminary, final) by a doctor specializing in "

pathological anatomy (adult, child)" on the day of the autopsy; - medical certificate of perinatal death (preliminary, final) by a doctor specializing in "pathological anatomy (adult, child)" on the day of the autopsy;

9) registration of autopsy results in the form of a protocol of pathoanatomic examination;

10) availability of a written notification to the judicial investigative authorities to resolve the issue of transferring the corpse for a forensic medical examination if signs of violent death are found and the termination of the pathological examination of the corpse;

11) availability of a written notification from a doctor specializing in "pathological anatomy (adult, children)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, an unusual reaction to vaccination, as well as an emergency notification to the state sanitary and epidemiological service, immediately after their detection;

12) carrying out a pathoanatomic examination of the placenta: - in case of stillbirth; - for all diseases of newborns detected at the time of birth; - in cases suspected of hemolytic disease of newborns; - in case of early discharge of water and in case of dirty waters; - for diseases of the mother that occur with a high fever in the last trimester of pregnancy; -

conclusions of the medical advisory commission", form № 029/u "Book of registration of temporary disability sheets", form № 037/u "Certificate № \_\_\_\_\_ on temporary disability of a student of college, vocational school, on illness, quarantine and other reasons for the absence of a child attending school, a preschool organization (          )", form № 038/u "Certificate № \_\_\_\_\_ on temporary disability" and others):

1) the presence of an examination of a person and a record of data on his state of health in the medical record of an outpatient (inpatient) patient, justifying the need for temporary release from work;

2) issuing a sheet and a certificate of temporary disability on the day of the person's discharge during inpatient treatment (including day hospitals, rehabilitation centers) for the entire period of inpatient treatment;

3) closing of the sheet and the certificate of temporary disability by the date of discharge from the hospital if the person's ability to work has been fully restored;

4) to persons who continue to be temporarily disabled, prolongation of the sheet and certificate of temporary disability for a period, taking into account the time required for his appearance to a medical officer of the polyclinic or to call a medical officer at home (but not more than

one calendar day). For persons who have received treatment outside their region of residence, the time required to arrive at their place of permanent residence (but not more than four calendar days) is taken into account;

5) issuance of a certificate of temporary disability in case of injuries sustained under the influence of alcohol or drugs, as well as in case of acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuing a sheet and a certificate of temporary disability to persons suffering from mental illnesses in case of late application to a medical organization over the past few days according to the conclusion of the MAC of a neuropsychiatric dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

7) issuing a sheet and a certificate of temporary disability to persons sent by a court decision for a forensic medical or forensic psychiatric examination and recognized as unfit for work from the date of admission to the examination;

8) issuing simultaneously a sheet and a certificate of temporary disability to a person who combines training with work

Availability of an entry in the medical documentation confirming compliance with the requirements for issuing a sheet and a certificate of temporary

disability for pregnancy and childbirth:

- a sheet or certificate of temporary disability for pregnancy and childbirth is issued by a medical professional (obstetrician-gynecologist), and in his absence - by a doctor, together with the head of the department after the conclusion of the MAC from thirty weeks pregnancy for a period of one hundred and twenty-six calendar days (seventy calendar days before delivery and fifty-six calendar days after delivery) during normal childbirth. For women living in territories affected by nuclear tests, a maternity disability certificate or a sheet is issued from twenty-seven weeks of pregnancy for one hundred and seventy calendar days (ninety-one calendar days before delivery and seventy-nine calendar days after delivery) during normal childbirth;

2) for women who have temporarily left their permanent place of residence within the Republic of Kazakhstan, a sheet or certificate of temporary disability for pregnancy and childbirth is issued (extended) at the medical organization where the birth took place or at the women's consultation (office) at the place of observation according to the statement (individual card) of the maternity organization

3) in case of complicated childbirth, the birth of two or more children, the sheet or certificate of temporary

disability is extended for an additional fourteen calendar days by a medical professional (obstetrician-gynecologist), and in his absence - by a doctor, together with the head of the department, after the conclusion of the MAC at the place of observation according to the statement of the obstetric health organization. In these cases, the total duration of prenatal and postpartum leave is one hundred and forty calendar days (seventy calendar days before delivery and seventy calendar days after delivery). For women living in territories affected by nuclear tests, in case of complicated childbirth, the birth of two or more children, a temporary disability certificate or the sheet is extended for an additional fourteen calendar days, the total duration of prenatal and postpartum leave is one hundred and eighty-four days (ninety-one calendar days before delivery and ninety-three calendar days after delivery);

4) in the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child weighing five hundred grams or more who has lived for more than seven days, a woman is given a sheet or certificate of disability upon delivery for seventy calendar days after delivery. In the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of

a stillborn fetus or a child weighing five hundred grams or more who died before seven days of life, a woman is given a sheet or certificate of temporary disability upon delivery for fifty-six calendar days after delivery;

5) for women living in territories exposed to nuclear tests, in case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child weighing five hundred grams or more who has lived for more than seven days, a sheet or certificate of temporary disability is issued for ninety-three calendar days after delivery.

To women living in territories exposed to nuclear tests, in case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a stillborn fetus or a child weighing five hundred grams or more who died before seven days of life, a sheet or certificate of temporary disability is issued for seventy-nine calendar days after delivery ;

6) if a woman applies for a temporary disability certificate during pregnancy, maternity leave is calculated in total and is granted fully regardless of the number of days she actually used before giving birth.

If a woman applies for a temporary disability certificate after childbirth,

only leave after childbirth provided for in this paragraph is given;

7) upon the onset of pregnancy during the period when a woman is on paid annual labor leave or leave without pay to care for a child until he reaches the age of three, a temporary disability certificate is issued for all days of maternity leave, except for the cases provided for in part two of subparagraph 6) of this paragraph;

8) in case of death of the mother during childbirth or in the postpartum period, a temporary disability certificate or certificate is issued to the person caring for the newborn;

9) in case of an operation for artificial termination of pregnancy, a sheet or certificate of temporary disability is issued by the doctor together with the head of the department for the duration of stay in the hospital and outpatient clinic where the operation was performed, and in case of complications - for the entire period of temporary disability.

In case of spontaneous abortion (miscarriage), a temporary disability certificate or sheet is issued for the entire period of temporary disability;

10) when carrying out an embryo transplant operation, a sheet or certificate of temporary disability is issued by the medical organization that performed the operation from the day the embryo was transplanted until pregnancy was established.

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|  | Persons who have adopted a newborn child (children), as well as the biological mother during surrogate motherhood directly from the maternity hospital receive a sheet or certificate of temporary disability from the date of adoption and until the expiration of fifty-six calendar days from the date of the child's birth.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |
|  | <p>Availability of supporting documentation (internal orders, regulations, protocols, questionnaires, analytical certificates) on the conduct of a clinical audit by the patient support service and internal expertise and its assessment according to the criteria:</p> <p>1) the quality of medical record collection, which is assessed according to the following criteria: lack of medical record collection; completeness of medical record collection; availability of data on past, chronic and hereditary diseases, performed blood transfusions, drug tolerance, allergic status; development of complications due to tactical errors in the conduct of medical and diagnostic measures due to poor medical record collection;</p> <p>2) completeness and validity of diagnostic studies, which are evaluated according to the following criteria: lack of diagnostic measures ; incorrect conclusion or lack of conclusion based on the results of diagnostic</p> |  |  |

studies, which led to incorrect diagnosis and errors in treatment tactics;  
conducting diagnostic studies prescribed by clinical protocols;  
conducting diagnostic studies with a high, unjustified risk to the patient's health, the validity of conducting diagnostic studies that are not included in clinical protocols;  
conducting diagnostic studies that are uninformative for making a correct diagnosis and have led to an unjustified increase in the duration of treatment and an increase in the cost of treatment;  
3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (during planned hospitalization, studies conducted at the pre-hospital stage are taken into account), which are evaluated according to the following criteria:  
the diagnosis is missing, incomplete or incorrect, and does not comply with the international classification of diseases;  
the leading pathological syndrome that determines the severity of the disease has not been identified, concomitant diseases and complications have not been recognized;  
the diagnosis is correct, but incomplete, the leading pathological syndrome has not been identified with the identified complications, concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases affecting the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of concomitant disease, rare complications and concomitant diseases) are reflected in the examination results. The impact of incorrect and/or untimely diagnosis on the subsequent stages of medical services (care) is being assessed;

4) the timeliness and quality of consultations of profile specialists, which are evaluated according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely , and the failure to take into account the consultant's opinion when making the diagnosis partially affected the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making the diagnosis , non-compliance with the consultant's

recommendation on treatment partially affected the outcome of the disease; the consultant's opinion is erroneous and affected the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons

for the untimely consultation and the impact of the untimely diagnosis on the subsequent stages of medical services (care);

5) the volume, quality and validity of therapeutic measures, which are evaluated according to the following criteria:

- lack of treatment in the presence of indications;
- prescribing treatment in the absence of indications;
- the appointment of ineffective therapeutic measures without taking into account the features of the course of the disease, concomitant diseases and complications;
- the implementation of therapeutic measures is incomplete, without taking into account the functional state of organs and systems

, prescribing medicines without proven clinical effectiveness;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasia, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are evaluated, including those caused by surgical interventions (late surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

achieving the expected clinical effect while observing the technology of providing medical services (care);  
 lack of clinical effect of therapeutic and preventive measures due to poor medical record collection and diagnostic studies;  
 the absence of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the features of the course of the disease, concomitant diseases, complications, prescribing medicines without proven clinical effectiveness;  
 the presence of polypragmasia, which caused the development of undesirable consequences;  
 8) the quality of medical records management, which is assessed by the availability, completeness and quality of records in primary medical records designed to record data on the health status of patients, reflecting the nature, volume and quality of medical care provided

Availability of an entry in the medical documentation confirming compliance with the requirements for providing surgical (abdominal, thoracic, coloproctological) care to patients at the outpatient level.  
 1) the presence of records by a doctor specializing in "Therapy (adolescent therapy, dietetics)", "Emergency and emergency medical care", "General medical practice (family medicine)" when a patient

submits complaints and symptoms of a surgical nature to a primary health care organization, referrals for patient consultation to profile specialists;

2) whether the indications for surgery have been determined, the amount of surgical intervention, the type of anesthetic aid, the risks of intra and postoperative complications, and the written consent of the patient for surgery has been obtained during surgical treatment at the outpatient level (in the organizations of consultative and diagnostic assistance and inpatient replacement care) ;

3) whether the relevant specialist of the polyclinic monitored the condition of patients discharged from the hospital in the postoperative period;

4) in the case of long-term treatment of patients after surgery, a specialist should consult with the doctors of the MAC and, based on their conclusion, refer patients to the MSE for the purpose of conducting an initial examination and (or) re-examination ( re-examination) to determine temporary (up to 1 year) and permanent disability);

5) compliance with the requirements for a profile specialist of a polyclinic ( numbered district, district, city), clinical and diagnostic department / center, in case of suspicion and (or) diagnosis of acute surgical pathology, to ensure that the patient is called and transported by

specialists if there are indications;

- 5) identification of acute and chronic diseases, timely implementation of emergency and planned medical measures; ‘
- 6) referral of children to a 24-hour hospital, a day hospital and the organization of a hospital at home, if indicated;
- 7) dynamic monitoring of children with chronic diseases registered at the dispensary, treatment and rehabilitation;
- 8) rehabilitation treatment and medical rehabilitation for children;
- 9) screening of newborns and young children;
- 10) organization of children's health improvement before their admission to preschool or school institutions;
- 11) information work with parents and family members or with legal representatives on the issues of rational nutrition, prevention of childhood diseases and formation of a healthy lifestyle

Availability of an entry in the medical documentation confirming compliance with the requirements for providing traumatological and orthopedic care at the outpatient level:

- 1) assessment by a traumatologist of the general condition of the patient, his traumatological and orthopedic status, provision of emergency medical care, additional laboratory and instrumental studies to clarify the diagnosis and, if necessary, medical indications in

cases requiring medical care in inpatient settings, referral of the patient to the appropriate departments, which provide specialized medical care for traumatological and orthopedic profile; 2) in the absence of medical indications for hospitalization of a patient with injuries to the musculoskeletal system, consultation on further follow-up and outpatient treatment at the place of attachment;

3) medical care for traumatological and orthopedic profile in primary health care organizations is provided by surgeons, orthopedic traumatologists;

4) availability of traumatology and orthopaedics rooms, trauma centers and examination and assessment of the severity of the patient's condition, his traumatic and orthopedic status, additional laboratory and instrumental studies to clarify the diagnosis and treatment (anesthesia, primary surgical treatment of wounds, closed reposition of bone fragments, immobilization) ;

5) carrying out an examination of temporary disability;

6) the presence of MAC and referral of patients with persistent signs of dysfunction of the musculoskeletal system to a medical and social expert commission

Availability of an entry in the medical documentation

confirming compliance with the requirements of neurological care at the outpatient level:

- 1) the provision of consultative and diagnostic assistance to a patient with neurological diseases is carried out at the referral of a PHC doctor or other profile specialist within the guaranteed scope of free medical care. In the absence of a referral from a primary health care doctor or other profile specialist, as well as when applying on the initiative of patients, the consultative and diagnostic assistance is provided on a fee basis;
- 2) a PHC doctor or other profile specialist carries out further monitoring of the patient after receiving an advisory and diagnostic opinion in accordance with the recommendations of the neurologist who provided consultative and diagnostic assistance

Availability of an entry in the medical documentation confirming compliance with the requirements of nephrological care:

- 1) examination by a doctor, identification of signs of kidney damage and conducting clinical diagnostic studies according to clinical protocols to determine the stage, etiology and degree of disease activity;
- 2) referral of the patient for consultative and diagnostic assistance (hereinafter referred to as CDA) with an extract from the outpatient patient's medical record in form № 097/u, with the data entered into the MIS;

3) the formation of risk groups for the development , prevention of progression and development of complications of chronic kidney disease (hereinafter – CKD), depending on the stage and nosological forms, as well as accounting and dynamic monitoring of patients with kidney disease is carried out by PHC specialists, taking into account the recommendations of nephrologists according to clinical protocols;

4) selection and referral for hospitalization to a medical organization for the provision of specialized medical care and high-tech medical care, taking into account the recommendations of nephrologists and multidisciplinary group ( MDG) doctors according to clinical protocols;

5) dynamic monitoring of patients with kidney damage of various origins, including in the postoperative ( post-transplant) period, including monitoring of disease activity, control and correction of immunosuppressive therapy;

6) medical rehabilitation of patients with nephrological diseases, CKD and acute kidney injury (hereinafter referred to as AKI), including those receiving dialysis therapy and undergoing surgery after kidney transplantation ( including monitoring the concentration of immunosuppressive

therapy drugs, prevention and timely detection of infectious complications);

7) organization and monitoring of provision of patients with kidney diseases (including patients on renal replacement therapy with medicines for free and (or) preferential outpatient care for certain categories of citizens of the Republic of Kazakhstan with certain diseases (conditions);

8) conducting an examination of temporary disability;

9) referral to the MSE to determine and establish disability;

10) registration and regular entry of data from patients with stage 1-5 CKD, AKI of all stages according to the international RIFLE classification of AKI: Risk, Injury, Failure, Lost, End Stage Renal Disease (End stage renal disease) in the MIS of a medical organization indicating the stage of CKD for monitoring, timely initiation of renal replacement therapy and ensuring continuity of patient route. If MIS is unavailable or absent, patients are registered in the CKD electronic registry . Registration of patients with CKD from stages 1 to 3a is carried out annually by general practitioners (hereinafter referred to as GP) (family doctors), district internists, pediatricians at the primary health care level. Registration of patients with CKD of stages 3b-5 is carried out by

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |

|  | organization are identified for medical reasons.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
|  | <p>Availability of medical documentation confirming compliance with the requirements for issuing a sheet and a certificate of temporary disability for pregnancy and childbirth:</p> <p>- a sheet or certificate of temporary disability for pregnancy and childbirth is issued by a medical professional (obstetrician-gynecologist), and in his absence - by a doctor, together with the head of the department, after the conclusion of the medical advisory commission (hereinafter referred to as the MAC) from thirty weeks of pregnancy for a period of one hundred and twenty-six calendar days (seventy calendar days before birth and fifty-six calendar days after delivery) during normal delivery.</p> <p>For women living in territories affected by nuclear tests, a maternity disability certificate or a sheet is issued from twenty-seven weeks of pregnancy for one hundred and seventy calendar days (ninety-one calendar days before delivery and seventy-nine calendar days after delivery) during normal childbirth;</p> <p>2) for women who have temporarily left their permanent place of residence within the Republic of Kazakhstan, a sheet or certificate of temporary disability for pregnancy and childbirth is issued (extended) at the medical organization where the birth took place or at</p> |  |  |

the women's consultation (office) at the place of observation according to the statement (exchange card) of the maternity organization

3) in case of complicated childbirth, the birth of two or more children, the sheet or certificate of temporary disability is extended for an additional fourteen calendar days by a medical professional (obstetrician-gynecologist), and in his absence - by a doctor, together with the head of the department, after the conclusion of the MAC at the place of observation according to the statement of the obstetric health organization.

In these cases, the total duration of prenatal and postpartum leave is one hundred and forty calendar days (seventy calendar days before delivery and seventy calendar days after delivery).

For women living in territories affected by nuclear tests, in case of complicated childbirth, the birth of two or more children, a temporary disability certificate or a sheet is extended for additional fourteen calendar days, the total duration of prenatal and postpartum leave is one hundred and eighty-four days (ninety-one calendar days before delivery and ninety-three calendar days after delivery);

4) in the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child weighing five

12.

hundred grams or more who has lived for more than seven days, a woman is given a sheet or certificate of disability upon delivery for seventy calendar days after delivery

.

In the case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a stillborn fetus or a child weighing five hundred grams or more who died before seven days of life, a woman is given a sheet or certificate of temporary disability upon delivery for fifty-six calendar days after delivery;

5) for women living in territories exposed to nuclear tests, in case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a child weighing five hundred grams or more who has lived for more than seven days, a sheet or certificate of temporary disability is issued for ninety-three calendar days after delivery.

To women living in territories exposed to nuclear tests, in case of childbirth between twenty-two and twenty-nine weeks of pregnancy and the birth of a stillborn fetus or a child weighing five hundred grams or more who died before seven days of life, a sheet or certificate of temporary disability is issued for seventy-nine calendar days after delivery

;

6) when a woman applies for a temporary disability

certificate during pregnancy, maternity leave is calculated in total and is granted completely regardless of the number of days she actually used before giving birth. When a woman applies for a temporary disability certificate after childbirth, only leave after childbirth provided for in this paragraph is given;

7) upon the onset of pregnancy during the period when a woman is on paid annual labor leave or leave without pay to care for a child until he reaches the age of three, a temporary disability certificate is issued for all days of maternity leave, except for the cases provided for in part two of subparagraph 6) of this paragraph;

8) in case of death of the mother during childbirth or in the postpartum period, a temporary disability certificate or a sheet is issued to the person caring for the newborn;

9) in case of an operation for artificial termination of pregnancy, a sheet or certificate of temporary disability is issued by the doctor together with the head of the department for the duration of stay in the hospital and outpatient clinic where the operation was performed, and in case of complications - for the entire period of temporary disability.

In case of spontaneous abortion (miscarriage), a temporary disability certificate or a sheet is issued for the entire period of temporary disability;

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |

|     | Availability of medical documentation confirming compliance with the actions during the autopsy:<br>1) conducting a pathoanatomical autopsy of corpses after the doctors have determined biological death, after providing the                                                                                                                                                                                                                                                                                                                                                      |  |  |

medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his deputy for the medical (medical) part of the healthcare organization to send for a pathoanatomical autopsy;

2) transfer of the inpatient patient's medical record or the outpatient patient's medical record with the pathoanatomic diagnosis entered in it to the medical archive of the healthcare organization no later than ten working days after the pathoanatomic autopsy;

3) conducting clinical and pathoanatomical analysis in cases of death of patients in healthcare organizations;

4) organization by the chief physician and the head of the pathology department of virological (immunofluorescence) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

5) transfer to the pathology bureaus, centralized pathology departments and pathology departments of medical records of inpatient patients for all those who died in the previous day no later than 10 a.m. on the day following the establishment of the fact of death

6) registration of the results of the pathoanatomic autopsy in the form of a pathoanatomic diagnosis (pathoanatomic diagnosis includes: underlying disease, complication of the underlying disease, concomitant disease,

24.

combined underlying disease);

7) registration of: - a medical death certificate (preliminary, final) by a doctor specializing in "pathological anatomy (adult, child)" on the day of the autopsy; - medical certificate of perinatal death (preliminary, final) by a doctor specializing in "pathological anatomy (adult, child)" on the day of the autopsy;

8) registration of autopsy results in the form of a protocol of pathoanatomic examination;

9) availability of a written notification to the judicial investigative authorities to resolve the issue of transferring the corpse for a forensic medical examination if signs of violent death are found and the termination of the pathological examination of the corpse;

10) availability of a written notification from a doctor specializing in "pathological anatomy (adult, children)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, an unusual reaction to vaccination, as well as an emergency notification to the state sanitary and epidemiological service, immediately after their detection; 11) carrying out a pathoanatomic examination of the placenta :

- for all diseases of newborns detected at the time of birth;

- in cases suspected of hemolytic disease of newborns;
- in case of early discharge of water and in case of dirty waters;
- for diseases of the mother that occur with a high fever in the last trimester of pregnancy;
- with an obvious anomaly of development or attachment of the placenta;
- if there are suspected congenital malformations of the fetus;
- in cases of preeclampsia, eclampsia

12) mandatory registration of a fetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

13) the establishment of a pathoanatomic autopsy, depending on the complexity, into the following categories:

- the first category;
- the second category;
- the third category;
- the fourth category;

14) establishment by a doctor in the specialty "pathological anatomy (adult, children)" of the category of pathoanatomic autopsy and the reasons for the discrepancy in diagnoses when the final clinical and pathoanatomic diagnoses differ;

15) availability of a detailed analysis with the definition of the profile and categories of iatrogenism in all cases of iatrogenic pathology identified as a result of a pathoanatomical autopsy

Availability of medical documentation confirming compliance with the following requirements for the organization of obstetric and gynecological care at the outpatient level:

- 1) ensuring early registration of pregnant women, on the day of applying to a medical organization, without taking into account the availability of insurance status;
- 2) medical care at home for pregnant women, new mothers, gynecological patients and a group of women of fertile age (hereinafter referred to as WFA) of social risk, universal (mandatory) patronage supervision of a pregnant woman for up to 12 weeks and 32 weeks of pregnancy
- 3) medical monitoring of pregnant women in order to prevent and early detection of complications of pregnancy, childbirth and the postpartum period, with the identification of women "by risk factors";
- 4) conducting prenatal screening - a comprehensive examination of pregnant women in order to identify a risk group for chromosomal pathology and congenital malformations of the intrauterine fetus;
- 5) identification of pregnant women in need of timely hospitalization in day hospitals, departments of pregnancy pathology of inpatient medical organizations providing obstetric and gynecological care, specialized medical

25.

organizations with extragenital pathology, in compliance with the principles of regionalization of perinatal care;

6) referral of pregnant women, women in labor and new mothers to receive specialized care with medical supervision, including the use of high-tech medical services in medical organizations at the republican level;

7) conducting prenatal training for pregnant women in preparation for childbirth, including for partner childbirth, informing pregnant women about alarming signs, effective perinatal technologies, principles of safe motherhood, breastfeeding and perinatal care;

8) patronage of pregnant and new mothers according to indications;

9) advising and providing services on family planning and reproductive health care;

10) prevention and detection of sexually transmitted infections for referral to profile specialists; 11)

examination of the WFA with the appointment, if necessary, of an in-depth examination using additional methods and involving profile specialists for the timely detection of extragenital, gynecological pathology and their admission to the dispensary ;

12) organization and conduct of preventive examinations of the female population for the purpose

34.

is collected in a special sterile, pre-labeled container. This procedure is carried out in a special room with a separate entrance, an appropriate interior, and a sanitary unit with a washbasin.

In the absence of donor sperm in a medical organization, or at the request of the patient, donor sperm from other organizations having a donor sperm bank is used.

Only cryopreserved donor sperm is used after repeated (6 months after cryopreservation) negative test results for HIV, syphilis, and hepatitis B and C.

The use of cryopreserved (thawed) sperm provides:

- 1) carrying out measures to prevent the transmission of HIV, syphilis, hepatitis and other sexually transmitted infections;
- 2) exclusion of the possibility of a meeting between the donor and the recipient.

Requirements for donor sperm:

- 1) the volume of ejaculate is more than 1.5 milliliters (hereinafter referred to as ml);
- 2) the concentration of spermatozoa in 1 ml of ejaculate is 15 million or more; the total number of spermatozoa in the entire ejaculate is 22.5 million or more;
- 3) the proportion of progressively mobile forms (A+B) is 32% or more;
- 4) the proportion of morphologically normal

| Providing medical care to newborns |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
|                                    | <p>Availability of an entry in the medical documentation confirming compliance with the requirements for the organization of medical care for newborns at the inpatient level:</p> <p>1) provision of medical care to newborns according to the levels of regionalization of perinatal care, depending on the indications;</p> <p>2) availability in the structure of organizations of hospitals of the first level of regionalization of perinatal care of: individual maternity wards, departments for the joint stay of mother and child, a vaccination room, intensive care units for newborns, as well as the staffing rate of a doctor specializing in Pediatrics (Neonatology) and a round-the-clock neonatal nurse post;</p> <p>3) availability in hospitals of the second level of regionalization of intensive care and neonatal intensive care units with a full set for resuscitation, ventilators with various ventilation modes (constant positive pressure in the airways), couvezes, a clinical diagnostic laboratory, as well as a round-the-clock post provided by the staffing table (a neonatologist and a pediatric nurse);</p> <p>4) Compliance of hospitals of the third level of</p> |  |  |

42.

regionalization of perinatal care with the following requirements:

availability of round-the-clock neonatal care, clinical, biochemical and bacteriological laboratories, departments of anesthesiology, intensive care and intensive care (hereinafter referred to as ICU) for women and newborns, as well as departments of pathology of newborns and nursing of premature infants staying with their mother.

availability of an intensive care unit for newborns, departments of pathology of newborns and premature care, equipped with modern medical and diagnostic equipment, medicines, round-the-clock post (medical and nursing), express laboratory.

5) Compliance with the following requirements in first-level hospitals for a sick newborn: primary intensive care; intensive and supportive therapy; oxygen therapy; invasive or non-invasive respiratory therapy; phototherapy; therapeutic hypothermia; infusion therapy and/or parenteral nutrition; treatment according to clinical protocols of diagnosis and treatment.

Compliance with the following requirements in second-level hospitals for a sick newborn: provision of primary intensive care to a newborn and stabilization of the condition, care for

premature babies with a gestation period of more than 34 weeks;  
catheterization of central veins and peripheral vessels;  
detection and treatment of congenital malformations, intrauterine growth retardation, hypoglycemia of newborns, hyperbilirubinemia, neonatal sepsis, damage to the central nervous system, respiratory distress syndrome, pneumothorax, necrotizing enterocolitis and other pathological conditions of the neonatal period;  
intensive care, including correction of vital functions (respiratory, cardiovascular, and metabolic disorders), invasive and noninvasive respiratory therapy, infusion therapy, and parenteral nutrition;  
if it is necessary to provide highly specialized care, the degree of readiness for transportation with the mother to a third-level obstetric organization or an institution of republican significance is determined.

Availability of an entry in the medical documentation confirming compliance with the requirements of medical care for newborns in third-level medical organizations:  
1) providing primary resuscitation to newborns and caring for newborns  
2) intensive and supportive therapy: respiratory therapy, catheterization of central veins and peripheral vessels, therapeutic hypothermia, parenteral

|     | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical certificates) on the conduct of a clinical audit by the Patient Support Service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of medical record collection, which is assessed according to the following criteria: lack of medical record collection; completeness of medical record collection; availability of data on past, chronic and hereditary diseases, performed blood transfusions, drug tolerance, allergic status;</p> |  |  |

the development of complications due to tactical errors in the conduct of medical and diagnostic measures due to poor medical record collection;

2) completeness and validity of diagnostic studies, which are evaluated according to the following criteria:

lack of diagnostic measures ;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies prescribed by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the validity of conducting diagnostic studies that are not included in clinical protocols;

conducting diagnostic studies that are uninformative for making a correct diagnosis and have led to an unjustified increase in the duration of treatment and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (during planned hospitalization, studies conducted at the pre-hospital stage are taken into account), which are evaluated according to the following criteria: no diagnosis, incomplete or

incorrect, does not comply with the international classification of diseases; the leading pathological syndrome that determines the severity of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct, but incomplete, the leading pathological syndrome has not been identified with the identified complications, and concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of concomitant disease, rare complications and concomitant diseases) are reflected in the examination results. The impact of incorrect and/or untimely diagnosis on the subsequent stages of medical services (care) is being assessed;

4) the timeliness and quality of consultations of profile specialists, which are evaluated according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely, and the failure to take into account the consultant's opinion when making the

diagnosis partially affected the outcome of the disease; the consultation was timely , the consultant's opinion was taken into account when making the diagnosis , non-compliance with the consultant's recommendation on treatment partially affected the outcome of the disease; the consultant's opinion is erroneous and influenced the outcome of the disease. Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on the subsequent stages of medical services (aid);

5) the volume, quality and validity of therapeutic measures, which are evaluated according to the following criteria:

- lack of treatment in the presence of indications;
- prescribing treatment in the absence of indications;
- the appointment of ineffective therapeutic measures without taking into account the features of the course of the disease, concomitant diseases and complications;
- the implementation of therapeutic measures is incomplete, without taking into account the functional state of organs and systems , prescribing medicines without proven clinical effectiveness;
- unjustified deviation from the requirements of clinical protocols, the presence of polypragmasia, which led to the development of a

new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are evaluated, including those caused by surgical interventions (delayed surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

achieving the expected clinical effect while observing the technology of providing medical services (care);

lack of clinical effect of therapeutic and preventive measures due to poor medical record collection and diagnostic studies;

the absence of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the features of the course of the disease, concomitant diseases, complications, prescribing medicines without proven clinical effectiveness;

the presence of polypragmasia, which caused the development of undesirable consequences;

8) the quality of medical records management, which is assessed by the availability, completeness and quality of records in primary medical records designed to record data on the health status of patients, reflecting the nature,

|----|--|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 3. |  | compliance of the performed therapeutic and diagnostic measures with the recommendations of the clinical protocols                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 4. |  | Availability of written voluntary consent of the patient or his legal representative for invasive interventions and for carrying out medical and diagnostic measures                                                                                                                                                                                                                                                                                                                                                            |  |  |
| 5. |  | Availability of medical documentation ("Emergency medical team call card" form № 085/u, "Admission and refusal log", "Inpatient medical record" form №001/u) confirming the arrival of the ambulance station team at the emergency medical services department at the PHC organization or at the hospital admission department, not exceeding 10 minutes (time for transfer of the patient to the doctor of the emergency department) from the moment of its arrival at the hospital, except in cases of emergency medical care |  |  |
|    |  | Availability of an entry in the medical documentation confirming the patient's admission to the hospital's emergency                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |

department, with an initial assessment and medical triage ( hereinafter referred to as medical triage) in a certain group, based on the patient's condition, its possible deterioration and the priority of emergency medical care.

Medical triage is carried out continuously and in succession. Upon completion of the assessment, the patient is marked with the color of one of the sorting categories, in the form of a special color tag or a colored ribbon.

6.

According to medical triage, there are 3 groups of patients:

the first group (red zone) – patients whose condition poses an immediate threat to life or who have a high risk of deterioration and require emergency medical care;

the second group ( yellow zone) consists of patients whose condition poses a potential threat to their health or may progress with the development of a situation requiring emergency medical care;

the third group (the green zone) consists of patients whose condition does not pose an immediate threat to life and health and does not

Availability of an entry in the medical documentation confirming the indications for admission to a day hospital at outpatient health organizations and to a hospital at home:

- 1) exacerbation of chronic diseases that do not require round-the-clock medical supervision;
- 2) active planned rehabilitation of a group of patients with chronic diseases subject to dynamic monitoring;
- 3) follow-up of the patient on the next day after the course of inpatient treatment for medical reasons;
- 4) conducting medical rehabilitation courses of the second and third stages;
- 5) palliative care;
- 6) orphan diseases in children associated with a high risk of infectious complications and requiring isolation during seasonal viral diseases in order to receive regular enzymatic replacement and antibacterial therapy.

The indications for admission to a day hospital at a 24-hour hospital are:

- 1) performing operations and interventions with special preoperative preparation and resuscitation support;

|     |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |

|  |  | the quality of medical care and reduce mortality                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
|  |  | <p>Availability of documentation confirming compliance with the actions during the autopsy:</p> <p>1) conducting a pathoanatomical autopsy of corpses after the doctors have determined biological death, after providing the medical record of an inpatient patient or the medical record of an outpatient patient with a written order from the chief physician or his deputy for the medical (medical) part of the healthcare organization to send for a pathoanatomical autopsy;</p> <p>2) registration of the results of the pathoanatomic autopsy in the form of a pathoanatomic diagnosis (pathoanatomic diagnosis includes: underlying disease, complication of the underlying disease, concomitant disease, combined underlying disease);</p> <p>3) transfer of the inpatient patient's medical record or the outpatient patient's medical record with the pathoanatomic diagnosis entered in it to the medical archive of the healthcare organization no later than ten working</p> |  |  |

days after the pathoanatomic autopsy;

4) conducting clinical and pathoanatomical analysis in cases of death of patients in healthcare organizations;

5) pathoanatomic autopsy in case of suspected acute infectious, oncological diseases, childhood pathology, death due to medical manipulations in order to establish the cause of death and clarify the diagnosis of fatal disease;

6) organization by the chief physician and the head of the pathology department of virological (immunofluorescence) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathology bureau, the centralized pathology bureau and the pathology department of medical records of inpatient patients for all those who died in the previous day no later than 10 a.m. on the day following the establishment of the fact of death;

8) registration of:

- a medical death certificate (preliminary, final) by a doctor specializing in "pathological anatomy (adult, child)" on the day of the autopsy;

49.

- medical certificate of perinatal death ( preliminary, final) by a doctor specializing in "pathological anatomy (adult, child )" on the day of the autopsy;

9) registration of autopsy results in the form of a protocol of pathoanatomical examination;

10) availability of a written notification to the judicial investigative authorities to resolve the issue of transferring the corpse for forensic examination if signs of violent death are found and termination of the pathoanatomical examination of the corpse;

11) availability of a written notification from a doctor specializing in " pathological anatomy (adult, children)" in case of initial detection during autopsy of signs of acute infectious disease, food or industrial poisoning, an unusual reaction to vaccination, as well as an emergency notification to the state sanitary and epidemiological service, immediately after their detection;

12) carrying out a pathological examination of the placenta:

- in case of stillbirth;

- for all diseases of newborns detected at the time of birth;
- in cases suspected of hemolytic disease of newborns;
- in case of early discharge of water and in case of dirty waters;
- in case of diseases of the mother that occur with a high fever in the last trimester of pregnancy;
- in case of an obvious anomaly of development or attachment of the placenta;
- if there are suspected congenital malformations of the fetus;
- in cases of preeclampsia, eclampsia

13) mandatory registration of a fetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

14) the establishment of a pathoanatomic autopsy, depending on the complexity, into the following categories:

- the first category;
- the second category;
- the third category;
- the fourth category;

15) establishment by a doctor in the specialty "pathological anatomy (adult, children)" of the category of pathoanatomic

|     |  |                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |
|-----|--|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     |  | <p>autopsy and the reasons for the discrepancy in diagnoses when the final clinical and pathoanatomic diagnoses differ</p> <p>16) availability of a detailed analysis with the definition of the profile and categories of iatrogenism in all cases of iatrogenic pathology identified as a result of a pathoanatomical autopsy</p>                                                                      |  |  |
| 50. |  | <p>Availability of a written statement from the spouse, close relatives or legal representatives of the deceased, or a written statement of the will given by the person during his lifetime to release the corpse without conducting a pathoanatomic autopsy, in the absence of suspicion of violent death.</p>                                                                                         |  |  |
|     |  | <p>Availability of documentation ( internal orders, regulations, protocols , questionnaires, analytical certificates ) confirming the conduct of a clinical audit by the patient support service and internal expertise, and its assessment according to the following criteria:</p> <p>1) the quality of medical record collection, which is evaluated according to the following criteria: lack of</p> |  |  |

medical record collection;  
completeness of medical record collection;  
availability of data on past, chronic and hereditary diseases, performed blood transfusions, drug tolerance, allergic status; the development of complications due to tactical errors in the conduct of medical and diagnostic measures due to poor medical record collection;  
2) completeness and validity of diagnostic studies, which are evaluated according to the following criteria:  
lack of diagnostic measures;  
incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;  
conducting diagnostic studies prescribed by clinical protocols;  
conducting diagnostic studies with a high, unjustified risk to the patient's health, the validity of conducting diagnostic studies that are not included in clinical protocols;  
conducting diagnostic studies that are uninformative for making a correct diagnosis and have led to an unjustified increase in the

duration of treatment and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (during planned hospitalization, studies conducted at the pre-hospital stage are taken into account ), which are evaluated according to the following criteria:

the diagnosis is missing, incomplete or incorrect, and does not comply with the international classification of diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct, but incomplete, the leading pathological syndrome has not been identified with the identified complications, concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases

51.

affecting the outcome of treatment have not been diagnosed.  
Objective reasons for incorrect and/or untimely diagnosis ( atypical course of the underlying disease, asymptomatic course of concomitant disease, rare complications and concomitant diseases) are reflected in the examination results.  
The impact of incorrect and/or untimely diagnosis on the subsequent stages of medical services (care) is being assessed;  
4) the timeliness and quality of consultations of profile specialists, which are evaluated according to the following criteria:  
lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;  
the consultation was timely, and the failure to take into account the consultant's opinion when making the diagnosis partially affected the outcome of the disease;  
the consultation was timely, the consultant's opinion was taken into account when making the diagnosis, non-compliance with

the consultant's recommendation on treatment partially affected the outcome of the disease;

the consultant's opinion is erroneous and affected the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on the subsequent stages of medical services (aid);

5) the volume, quality and validity of therapeutic measures, which are evaluated according to the following criteria:

lack of treatment in the presence of indications;

prescribing treatment in the absence of indications;

the appointment of ineffective

therapeutic measures without taking into account the features of the course of the disease, concomitant diseases and complications;

the implementation of therapeutic measures is incomplete, without taking into account the functional state of organs and systems, prescribing medicines without proven clinical effectiveness;

unjustified deviation from the requirements of clinical protocols, the presence of polypragmasia, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are evaluated, including those caused by surgical interventions (late surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

- achieving the expected clinical effect while observing the technology of providing medical services (care);
- lack of clinical effect of therapeutic and preventive measures due to poor medical record collection and diagnostic studies;
- the absence of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the features of the course of the

|     |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |

59.

cardiac surgery are reached (according to the levels of complexity of the patient category), the medical organization performs surgical interventions of the complexity category level during three evaluation periods;

2) the assessment of the complexity of surgical interventions for congenital heart defects is carried out according to the basic Aristotle scale.

In the case of multiple operations for one child, only one operation with the highest score on the basic Aristotle scale is taken into account.

To objectify the quality of the work of the pediatric cardiac surgery department, a parameter such as the efficiency of operations is used, calculated according to the equation: (average difficulty value on the basic Aristotle scale) x (30-day postoperative survival) / 100 = (Efficiency of operations):

determining the level of regionalization of cardiac surgery care for children;

upon reaching the target values of key indicators for the regionalization of cardiac surgical care for the pediatric population (according to the levels of

program renal replacement therapy is the level of glomerular filtration rate (hereinafter referred to as GFR):

1)  $\text{GFR} < 6 \text{ ml/min}$  is an absolute indication for starting therapy;

2)  $\text{GFR} < 10 \text{ ml/min}$  – in the presence of one or more symptoms of uremia: uncontrolled hyperhydration and edema, uncontrolled hypertension, progressive violation of nutritional status and acid-base state;

3)  $\text{GFR} < 20 \text{ ml/min}$  – in high-risk patients (uncontrolled edema, diabetic nephropathy and nephrotic syndrome, patients with low heart fraction, comorbid conditions).

Patients with anuria or oliguria (diuresis  $< 600 \text{ ml/day}$ ) are recommended to have HD sessions at least 3 times a week with a total effective dialysis time of more than 720 minutes.

Patients with daily diuresis  $> 600 \text{ ml}$  are recommended to individually consider starting HD treatment with a reduction in the frequency of sessions (1-2 times a week) and/or the total effective dialysis time (240-690 minutes per week).

Availability of an entry in the medical documentation confirming compliance with the absolute indications for emergency renal replacement therapy in patients with stage 4-5 CKD and/or suspected AKI is:

1) serum urea over  $37.5 \text{ mmol/L}$ , decreased  $\text{GFR} <$

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |

room nurse: laying out sterile packages, preparation of fistula needles, dialyzer, solutions for filling mains and dialyzer;

- assembly of an extracorporeal contour (blood lines, dialyzer) with installation on an artificial kidney device;
- filling and flushing of extracorporeal contour with saline solution with anticoagulant;
- preparation of the patient: weighing on electronic scales with registration of the amount of interdialysis weight gain in the dialysis chart, treatment of the skin surface with disinfectants at the site of vascular access puncture;
- connecting the patient to the artificial kidney device;
- setting the blood flow rate on the "artificial kidney" device;
- monitoring of blood pressure, heart rate and pulse rate at least once an hour, with hourly registration of results in the dialysis chart;
- control of the correctness of the volume of ultrafiltration (at the end of dialysis), with registration of the results in the dialysis chart;
- monitoring of the position of the fistula needles in the arteriovenous fistula (constantly);
- monitoring of venous and arterial pressure sensors (constantly);
- monitoring of anticoagulation (constantly visually);
- monitoring of the ionic composition of the blood

| 9  | Availability of an entry in the medical documentation confirming the provision of medicines and supplies according to the dialysis protocol                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 10 | Availability of a water treatment system and compliance with the requirements for the preparation of hemodialysis fluids, the quality of hemodialysis solutions and a blood purification system                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 11 | Availability of a contract for the provision of paid medical services in healthcare organizations. Availability of documents confirming the fact of co-payment                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|    | Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical certificates) on the conduct of a clinical audit by the patient support service and internal expertise and its                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

assessment according to the following criteria:

1) the quality of medical record collection, which is evaluated according to the following criteria: lack of medical record collection; completeness of medical record collection; availability of data on past, chronic and hereditary diseases, performed blood transfusions, drug tolerance, allergic status;

the development of complications due to tactical errors in the conduct of medical and diagnostic measures due to poor medical record collection;

2) completeness and validity of diagnostic studies, which are evaluated according to the following criteria:

lack of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics; conducting diagnostic studies prescribed by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the validity of conducting diagnostic studies that are not included in clinical protocols;

conducting diagnostic studies that are uninformative for making a correct diagnosis and have led to an unjustified increase in the duration of treatment and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (during planned hospitalization, studies conducted at the pre-hospital stage are taken into account), which are evaluated according to the following criteria:

the diagnosis is missing, incomplete or incorrect, and does not comply with the international classification of diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct, but incomplete, the leading pathological syndrome has not been identified with the identified complications, concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases affecting the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of concomitant disease, rare complications and concomitant diseases) are reflected in the examination results. The impact of incorrect and/or untimely diagnosis on the subsequent stages of medical services (aid) is being assessed;

4) the timeliness and quality of consultations of profile specialists, which are evaluated according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely, and the failure to take into account the consultant's opinion when making the diagnosis partially affected the outcome of the disease;

the consultation was timely, the consultant's opinion was taken into account when making the diagnosis, non-compliance with the consultant's

recommendation on treatment partially affected the outcome of the disease; the consultant's opinion is erroneous and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on the subsequent stages of medical services (assistance);

5) the volume, quality and validity of therapeutic measures, which are evaluated according to the following criteria:

lack of treatment in the presence of indications;

prescribing treatment in the absence of indications;

the appointment of ineffective therapeutic measures without taking into account the features of the course of the disease,

concomitant diseases and complications;  
the implementation of therapeutic measures is incomplete, without taking into account the functional state of organs and systems , prescribing medicines without proven clinical effectiveness;  
unjustified deviation from the requirements of clinical protocols, the presence of polypragmasia, which led to the development of a new pathological syndrome and deterioration of the patient's condition;  
6) the absence or development of complications after medical interventions, all complications that have arisen are evaluated, including those caused by surgical interventions (late surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;  
7) the achieved result, which is evaluated according to the following criteria:  
achieving the expected clinical effect while observing the technology of providing medical services (care);  
lack of clinical effect of therapeutic and preventive measures due to poor medical record collection and diagnostic studies;  
the absence of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the features of the course of the disease, concomitant diseases, complications,

| 20 | <p>Availability of an entry in the medical documentation confirming compliance with the requirements for providing anesthesiological and intensive care:</p> <ol style="list-style-type: none"> <li>1) providing specialized medical care to patients in an emergency and routine manner, including high-tech medical services;</li> <li>2) determination of the anesthesia method, implementation of drug preoperative preparation and implementation of various anesthesia techniques for various surgical interventions, childbirth, diagnostic and therapeutic procedures;</li> <li>3) monitoring the condition of patients in the post-acute period in the wards of "awakening" until the restoration of consciousness and stabilization of the function of vital organs;</li> <li>4) assessment of the degree of dysfunction of vital organs and systems and the implementation of an expanded range of measures for resuscitation and intensive care in various critical situations, including extracorporeal detoxification, hyperbaric oxygenation, and electrocardiostimulation;</li> <li>5) intensive monitoring (rapid monitoring of the state of life support systems, as well as metabolism using</li> </ol> |  |  |

laboratory and functional diagnostic methods, monitoring of respiration and blood circulation), full-fledged and targeted correction of disorders;

6) carrying out resuscitation measures for patients (if indicated) in other departments;

7) establishment of indications for further treatment of patients in Intensive Care Unit, as well as the transfer of patients from Intensive Care Unit to specialized departments after stabilization of the function of vital organs with recommendations for treatment and examination for the next day;

8) advising doctors of other departments on the issues of practical anesthesiology and intensive care;

9) analysis of the effectiveness of the department and the quality of medical care provided, development and implementation of measures to improve the quality of medical care

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical certificates) on the conduct of a clinical audit by the patient support service and internal expertise and its assessment according to the following criteria:

1) the quality of medical record collection, which is evaluated according to the following criteria: lack of medical record collection; completeness of medical record collection;

availability of data on past, chronic and hereditary diseases, performed blood transfusions, drug tolerance, allergic status;

the development of complications due to tactical errors in the conduct of medical and diagnostic measures due to poor medical record collection;

2) completeness and validity of diagnostic studies, which are evaluated according to the following criteria:

lack of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, which led to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies prescribed by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the validity of conducting diagnostic studies that are not included in clinical protocols;

conducting diagnostic studies that are uninformative for making a correct diagnosis and have led to an unjustified increase in the duration of treatment and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (during planned hospitalization, studies conducted at the pre-hospital stage are taken into account), which are

evaluated according to the following criteria:

the diagnosis is missing, incomplete or incorrect, and does not comply with the international classification of diseases;  
the leading pathological syndrome that determines the severity of the disease has not been identified, concomitant diseases and complications have not been recognized;

the diagnosis is correct, but incomplete, the leading pathological syndrome has not been identified with the identified complications, concomitant diseases affecting the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases affecting the outcome of treatment have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of concomitant disease, rare complications and concomitant diseases) are reflected in the examination results. The impact of incorrect and/or untimely diagnosis on the subsequent stages of medical services (care) is being assessed;

4) the timeliness and quality of consultations of profile specialists, which are evaluated according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely  
, and the failure to take into  
account the consultant's  
opinion when making the  
diagnosis partially affected  
the outcome of the disease;  
the consultation was timely  
, the consultant's opinion  
was taken into account  
when making the diagnosis  
, non-compliance with the  
consultant's  
recommendation on  
treatment partially affected  
the outcome of the disease;  
the consultant's opinion is  
erroneous and affected the  
outcome of the disease.

Availability of  
documentation confirming  
the assessment of the  
objectivity of the reasons  
for the untimely  
consultation and the impact  
of the untimely diagnosis  
on the subsequent stages of  
medical services (aid);

5) the volume, quality and  
validity of therapeutic  
measures, which are  
evaluated according to the  
following criteria:

lack of treatment in the  
presence of indications;  
prescribing treatment in the  
absence of indications;

the appointment of  
ineffective therapeutic  
measures without taking  
into account the features of  
the course of the disease,  
concomitant diseases and  
complications;

the implementation of  
therapeutic measures is  
incomplete, without taking  
into account the functional  
state of organs and systems  
, prescribing medicines  
without proven clinical  
effectiveness; unjustified  
deviation from the  
requirements of clinical  
protocols, the presence of

polypragmasia, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions, all complications that have arisen are evaluated, including those caused by surgical interventions (late surgical intervention, inadequate scope and method, technical defects) and diagnostic procedures;

7) the achieved result, which is evaluated according to the following criteria:

achieving the expected clinical effect while observing the technology of providing medical services (care);

lack of clinical effect of therapeutic and preventive measures due to poor medical record collection and diagnostic studies;

the absence of the expected clinical effect due to ineffective therapeutic and preventive measures without taking into account the features of the course of the disease, concomitant diseases, complications, prescribing medicines without proven clinical effectiveness;

the presence of polypragmasia, which caused the development of undesirable consequences;

8) the quality of medical records management, which is assessed by the availability, completeness and quality of records in primary medical records designed to record data on the health status of patients

|    | <p>Availability of documentation confirming the examination of individuals for clinical indications for HIV infection when the following diseases, syndromes and symptoms are detected:</p> <ol style="list-style-type: none"> <li>1) enlargement of two or more lymph nodes lasting more than 1 month, persistent, generalized lymphadenopathy;</li> <li>2) fever of unknown etiology (constant or recurrent, lasting more than 1 month);</li> <li>3) unexplained severe cachexia or severe nutritional deficiencies that are poorly responsive to standard treatment (in children), unexplained weight loss of 10% or more ;</li> <li>4) chronic diarrhea lasting 14 days or more (in children), unexplained chronic diarrhea lasting more than a month;</li> </ol> |  |  |

- 5) seborrheic dermatitis, itchy papular rash (in children);
- 6) angular cheilitis;
- 7) recurrent upper respiratory tract infections (sinusitis, otitis media, pharyngitis, tracheitis, bronchitis);
- 8) shingles;
- 9) any disseminated endemic mycosis, deep mycoses (coccidioidomycosis, extrapulmonary cryptococcosis (cryptococcal meningitis), sporotrichosis, aspergillosis, isosporiasis, extrapulmonary histoplasmosis, strongyloidiasis, actinomycosis);
- 10) pulmonary and extrapulmonary tuberculosis, including disseminated infection caused by atypical mycobacteria, except for tuberculosis of the peripheral lymph nodes;
- 11) hairy leukoplakia of the oral cavity, linear erythema of the gums;
- 12) severe protracted recurrent pneumonia and chronic bronchitis that do not respond to conventional therapy (two or more times a year), asymptomatic and clinically expressed lymphoid interstitial pneumonia;
- 13) sepsis, protracted and recurrent purulent-bacterial diseases of internal organs (pneumonia, pleural empyema, meningitis, meningoencephalitis, bone and joint infections, purulent myositis, salmonella septicemia (except *Salmonella typhi*),

stomatitis, gingivitis, periodontitis);

14) Pneumocystis pneumonia;

15) infections caused by the herpes simplex virus, with damage to internal organs and chronic (lasting more than one month from the onset of the disease) damage to the skin and mucous membranes, including the eyes;

16) cardiomyopathy;

17) nephropathy;

18) encephalopathy of unknown etiology;

19) progressive multifocal leukoencephalopathy;

20) Kaposi's sarcoma;

21) neoplasms, including lymphoma (brain) or B-cell lymphoma;

22) toxoplasmosis of the central nervous system;

23) candidiasis of the esophagus, bronchi, trachea, lungs, mucous membranes of the mouth and nose;

24) disseminated infection caused by atypical mycobacteria;

25) cachexia of unknown etiology;

26) protracted recurrent pyoderma that does not respond to conventional therapy;

27) severe chronic inflammatory diseases of the female reproductive system of unclear etiology;

28) invasive neoplasms of the female genital organs;

29) mononucleosis 3 months after the onset of the disease;

30) sexually transmitted infections (syphilis, chlamydia, trichomoniasis, gonorrhea, genital herpes, viral papillomatosis and

others) with an established diagnosis;  
 31) viral hepatitis B and C, if the diagnosis is confirmed;  
 32) extensive confluent condylomas;  
 33) molluscum contagiosum with extensive rash, giant disfiguring molluscum contagiosum;  
 34) primary dementia in previously healthy individuals;  
 35) patients with hemophilia and other diseases who systematically receive transfusions of blood and its components;  
 36) generalized cytomegalovirus infection

Presence of a record in the medical documentation confirming compliance with the requirements for examining temporary disability, issuing a sheet and a certificate of temporary disability (form № 001/y "Inpatient Medical Record", form 052 /y "Outpatient Medical Record", stubs of sheets of temporary disability of patients, form № 025/y "Journal for recording the conclusions of the medical advisory commission", form № 029/y "Registration book of sheets of temporary disability", form № 037/y "Certificate № \_\_\_\_\_ on temporary disability of a student, college student, vocational school, illness, quarantine and other reasons for the absence of a child attending school, preschool organization (underline as appropriate)",

form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

- 1) availability of an examination of the person and a record of data on his/her health condition in the medical record of an outpatient (inpatient) patient, justifying the need for his/her temporary exemption from work;
- 2) issuance of a certificate of temporary disability on the day of discharge of persons undergoing inpatient treatment (including day hospitals, rehabilitation centers) for the entire period of inpatient treatment;
- 3) closing the sick leave certificate and the certificate of temporary disability with the date of discharge from the hospital if the working capacity of the person is fully restored;
- 4) extension of the sick leave certificate and temporary disability certificate for persons who continue to be temporarily incapacitated for a period taking into account the time required for their appearance at a medical worker's clinic or for a medical worker to be called to their home (but not more than for one calendar day). For persons who received treatment outside the region of residence, the time required for arrival at their permanent place of residence shall be taken into account (but not more than for four calendar days);
- 5) issuance of a certificate of temporary disability in case of injuries sustained while under the influence

of alcohol or drugs, as well as in case of acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuance of a certificate of temporary disability to persons suffering from mental illnesses, in the event of untimely application to a medical organization in the past days, based on the conclusion of the medical commission of the neuropsychiatric dispensary or a medical worker (psychiatrist), together with the head of the medical organization;

7) issuance of a certificate and a temporary disability sheet to persons referred by a court decision for a forensic medical or forensic psychiatric examination and recognized as incapacitated from the date of admission to the examination;

8) issuing both a sick leave certificate and a certificate of temporary disability to a person combining study with work.

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:

1) the quality of anamnesis collection, which shall be assessed according to the following criteria:

lack of anamnesis collection;

completeness of the anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status; development of complications due to tactical errors made during treatment and diagnostic procedures, due to poor quality of collection of anamnesis;

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures ;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which

shall be assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

- lack of consultation, which led to an erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
the consultation was timely  
; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs

and systems, prescription of drugs without proven clinical effectiveness;  
unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;  
6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;  
7) the achieved result, which shall be assessed according to the following criteria:  
achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);  
lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;  
lack of the expected clinical effect due to the implementation of ineffective treatment and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, the prescription of drugs without proven clinical effectiveness;  
presence of polypharmacy, which led to the

|  | <p>development of undesirable consequences;</p> <p>8) the quality of medical documentation, which shall be assessed by the presence , completeness and quality of entries in the primary medical documentation intended to record data on the health status of patients , reflecting the nature, scope and quality of medical care provided</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
|  | <p>Availability of documentation confirming compliance with the actions during the pathological autopsy:</p> <p>1) conducting a pathological autopsy of corpses after doctors have confirmed biological death, after providing an inpatient medical record or an outpatient medical record with a written order from the chief physician or his/ her deputy for the medical (treatment) part of the healthcare organization on referral for a pathological autopsy;</p> <p>2) presentation of the results of the pathological examination in the form of a pathological diagnosis ( pathological diagnosis shall include the following: the underlying disease, complication of the underlying disease, concomitant disease, combined underlying disease);</p> <p>3) transfer of the medical record of an inpatient or the medical record of an outpatient with the pathological diagnosis entered into it to the medical archive of a healthcare organization no</p> |  |  |

later than ten working days after the pathological autopsy;

4) conducting clinical and pathological analysis in cases of death of patients in healthcare organizations;

5) pathological autopsy in cases of suspected acute infectious, oncological diseases, childhood pathology, fatal outcome due to medical manipulations to establish the cause of death and clarify the diagnosis of a fatal disease;

6) organization by the chief physician and head of the pathological anatomy department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathological anatomy bureau, centralized pathological anatomy bureau and pathological anatomy department of medical records of inpatients for all those who died during the previous day no later than 10:00 a.m. on the day following the establishment of the fact of death;

8) processing of:

- a medical death certificate (preliminary, final) issued by a physician specializing in "pathological anatomy (adult, pediatric)" on the day of the postmortem examination;
- a medical certificate of perinatal death (preliminary, final) issued by a physician specializing in "pathological anatomy (adult, pediatric)" on the

day of the pathological autopsy;

9) registration of the results of the autopsy in the form of a protocol of the pathological examination;

10) availability of a written notification to the judicial investigative bodies to decide on the transfer of the body for forensic medical examination if signs of violent death are detected and the termination of the pathological examination of the body;

11) availability of a written notification from a physician specializing in "pathological anatomy (adult, pediatric)" in the event of the initial detection during an autopsy of signs of an acute infectious disease, food or industrial poisoning, an unusual reaction to a vaccination, as well as an emergency notification to the state sanitary and epidemiological service immediately after their detection;

12) conducting a pathological examination of the placenta:

- in case of stillbirth;
- for all diseases of newborns detected at the time of birth;
- in cases of suspected hemolytic disease of the newborn;
- when the waters break early and when the waters are dirty;
- in case of maternal illnesses accompanied by high temperature in the last trimester of pregnancy;

patient in clinical group Ia, primary care physicians shall remove the suspicion of a malignant neoplasm or transfer the patient to the appropriate clinical groups:

1) if a precancerous disease is detected, the patient shall be transferred to clinical group Ib;

2) when the diagnosis of malignant neoplasm is confirmed (verified), the patient shall be taken for dynamic observation according to clinical group II;

3) patients with advanced forms of malignant neoplasms that do not respond to special treatment shall be transferred to clinical group IV.

Patients of clinical group Ib are subject to dynamic observation and rehabilitation by specialists of primary health care and clinical and outpatient departments in organizations providing medical care on an outpatient basis at the place of their attachment, carried out for observation of groups with increased oncological risk in medical organizations for observation of groups with increased oncological risk in medical organizations of primary health care and clinical and outpatient departments.

In the second clinical group, all primary patients with malignant neoplasms shall be observed who are indicated for special treatment, regardless of the stage of the disease, including patients with stage 4 malignant

neoplasms, if there are indications for special treatment.

Transfer from clinical group II to group III shall be carried out after completion of a full course of special treatment upon receipt of diagnostically confirmed results of radical cure, as well as the absence of progression and relapse of the malignant neoplasm.

Medical dynamic observation of patients of clinical group III shall be carried out:

- 1) during the first year of illness – once every three months;
- 2) during the second year of illness – once every six months;
- 3) from the third year – once a year.

Dynamic observation of the II clinical group by secondary level specialists shall be carried out in accordance with periodic clinical protocols, at least once every three months.

Patients from clinical group III shall be transferred to II in case of progression and relapse of malignant neoplasm.

The IV clinical group shall include patients with advanced forms of malignant neoplasms, with aggravating concomitant pathology that does not allow for special treatment, and who are subject to palliative or symptomatic treatment.

Transfer from clinical group II to IV shall be carried out when the disease progresses during treatment.

|  | <p>treatment if there are indications for early discharge after surgical treatment;</p> <p>5) palliative care;</p> <p>6) chemotherapy, radiation therapy, correction of pathological conditions that arise after specialized treatment of cancer patients</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
|  | <p>Presence of an entry in the medical documentation confirming compliance with the requirements for the examination of temporary disability, issuance of a sheet and a certificate of temporary disability (form № 001/y "Inpatient Medical Record", form 052/y "Outpatient Medical Record", stubs of sheets of temporary disability of patients, form № 025/y "Journal for recording the conclusions of the medical advisory commission", form № 029/y "Registration book of sheets of temporary disability", form № 037/y "Certificate № ____ on temporary disability of a student, college student, vocational school, on illness, quarantine and other reasons for the absence of a child attending school, preschool organization (underline as appropriate)", form № 038/y "Certificate № _____ on temporary disability" and others):</p> <p>1) availability of an examination of the person and a record of data on his/her health condition in the medical record of an outpatient (inpatient) patient, justifying the need for his/her temporary exemption from work;</p> |  |  |

2) issuance of a certificate of temporary disability on the day of discharge of persons undergoing inpatient treatment (including day hospitals, rehabilitation centers) for the entire period of inpatient treatment;

3) closing the sick leave certificate and the certificate of temporary disability with the date of discharge from the hospital if the working capacity of the person is fully restored;

4) extension of the sick leave certificate and temporary disability certificate for persons who continue to be temporarily incapacitated for a period taking into account the time required for their appearance at a medical worker's clinic or for a medical worker to be called to their home (but not more than for one calendar day). For persons who received treatment outside the region of residence, the time required for arrival at their permanent place of residence shall be taken into account (but not more than for four calendar days) ;

5) issuance of a certificate of temporary disability in case of injuries sustained while under the influence of alcohol or drugs, as well as in case of acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuance of a certificate of temporary disability to persons suffering from mental illnesses, in the event of untimely application to a medical organization in the past

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|  | <p>days, based on the conclusion of the medical commission of the neuropsychiatric dispensary or a medical worker (psychiatrist) together with the head of the medical organization;</p> <p>7) issuance of a certificate and a temporary disability sheet to persons referred by a court decision for a forensic medical or forensic psychiatric examination and recognized as incapacitated from the date of admission to the examination;</p> <p>8) issuing both a sick leave certificate and a certificate of temporary disability to a person combining study with work.</p>                                                                                                                                                                      |  |  |
|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the patient support service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of anamnesis collection, which shall be assessed according to the following criteria:</p> <p>lack of anamnesis collection;</p> <p>completeness of the anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance , allergy status;</p> <p>development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;</p> |  |  |

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures

;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and

complications have not been recognized;  
the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;  
the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

- lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;
- the consultation was timely
- ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;
- the consultation was timely
- , the consultant's opinion

was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;

unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which shall be assessed according to the following criteria:

- achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);
- lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;
- lack of the expected clinical effect due to the implementation of ineffective treatment and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, the prescription of drugs without proven clinical effectiveness;
- presence of polypharmacy, which led to the development of undesirable consequences;

8) the quality of medical documentation, which shall be assessed by the presence, completeness and quality of entries in the primary medical documentation intended to record data on the health status of patients

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |

| 29 | <p>in the medical record ( paper and (or) electronic) version.</p> <p>The entry shall be made into the electronic version of the medical record no later than 24 hours after the patient's condition changes .</p> <p>In emergencies, the frequency of entries shall depend on the dynamics of the severity of the condition. The hospital doctor's entries shall reflect specific changes in the patient's condition and the need to adjust prescriptions , the rationale for the examination and treatment prescribed, the assessment and interpretation of the results obtained and the effectiveness of the treatment. The frequency of examination in emergencies shall be at least every 3 hours, indicating the time of emergency care by hour and minute.</p> |  |  |
| 30 | <p>Presence of a record in the medical documentation confirming the holding of consultations or a council in case of difficulty in identifying the diagnosis, the ineffectiveness of the treatment, as well as for other indications</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
|    | <p>Presence of a record in the medical documentation confirming the examination of individuals for clinical indications for HIV infection when the following diseases, syndromes and symptoms shall be detected:</p> <p>1) enlargement of two or more lymph nodes lasting</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |

more than 1 month, persistent, generalized lymphadenopathy;

2) fever of unknown etiology (constant or recurrent, lasting more than 1 month);

3) unexplained severe cachexia or severe nutritional deficiencies that are poorly responsive to standard treatment (in children), unexplained weight loss of 10% or more ;

4) chronic diarrhea lasting 14 days or more (in children), unexplained chronic diarrhea lasting more than a month;

5) seborrheic dermatitis, itchy papular rash (in children);

6) angular cheilitis;

7) recurrent upper respiratory tract infections (sinusitis, otitis media, pharyngitis, tracheitis, bronchitis);

8) shingles;

9) any disseminated endemic mycosis, deep mycoses (coccidioidomycosis, extrapulmonary cryptococcosis (cryptococcal meningitis), sporotrichosis, aspergillosis, isosporiasis, extrapulmonary histoplasmosis, strongyloidiasis, actinomycosis);

10) pulmonary and extrapulmonary tuberculosis, including disseminated infection caused by atypical mycobacteria, except for tuberculosis of the peripheral lymph nodes;

- 11) hairy leukoplakia of the oral cavity, linear erythema of the gums;
- 12) severe protracted recurrent pneumonia and chronic bronchitis that do not respond to conventional therapy (two or more times a year), asymptomatic and clinically expressed lymphoid interstitial pneumonia;
- 13) sepsis, protracted and recurrent purulent-bacterial diseases of internal organs (pneumonia, pleural empyema, meningitis, meningoencephalitis, bone and joint infections, purulent myositis, salmonella septicemia (except *Salmonella typhi*), stomatitis, gingivitis, periodontitis);
- 14) Pneumocystis pneumonia;
- 15) infections caused by the herpes simplex virus, with damage to internal organs and chronic (lasting more than one month from the onset of the disease) damage to the skin and mucous membranes, including the eyes;
- 16) cardiomyopathy;
- 17) nephropathy;
- 18) encephalopathy of unknown etiology;
- 19) progressive multifocal leukoencephalopathy;
- 20) Kaposi's sarcoma;
- 21) neoplasms, including lymphoma (brain) or B-cell lymphoma;
- 22) toxoplasmosis of the central nervous system;
- 23) candidiasis of the esophagus, bronchi, trachea, lungs, mucous membranes of the mouth and nose;

|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of anamnesis collection, which shall be assessed according to the following criteria:</p> <p>lack of anamnesis collection;</p> <p>completeness of the anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;</p> <p>development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;</p> <p>2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:</p> <p>lack of diagnostic measures ;</p> <p>incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;</p> <p>conducting diagnostic studies provided for by clinical protocols;</p> <p>conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting</p> |  |  |

diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease,

asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;

unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which shall be assessed according to the following criteria:

achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);

lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;

lack of the expected clinical effect due to the implementation of ineffective treatment and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, the prescription of drugs without proven clinical effectiveness;

presence of polypharmacy, which led to the development of undesirable consequences;

8) the quality of medical documentation, which shall be assessed by the presence , completeness and quality of entries in the primary medical documentation intended to record data on the health status of patients , reflecting the nature, scope and quality of medical care provided

Presence of a record in the medical documentation confirming compliance with the requirements for conducting a pathological autopsy:

1) conducting a pathological autopsy of corpses after doctors have confirmed biological death, after providing an inpatient medical record or an outpatient medical record with a written order from the chief physician or his/her deputy for the medical (treatment) part of the healthcare organization on referral for a pathological autopsy;

2) presentation of the results of the pathological examination in the form of a pathological diagnosis (pathological diagnosis shall include the following: the underlying disease, complication of the underlying disease, concomitant disease, combined underlying disease);

3) transfer of the medical record of an inpatient or the medical record of an outpatient with the pathological diagnosis entered into it to the medical archive of a healthcare organization no later than ten working days after the pathological autopsy;

4) conducting clinical and pathological analysis in cases of death of patients in healthcare organizations;

5) pathological autopsy in cases of suspected acute infectious, oncological diseases, childhood pathology, fatal outcome due to medical manipulations to establish the cause of death and clarify the diagnosis of a fatal disease;

6) organization by the chief physician and head of the pathological anatomy department of virological (immunofluorescent) and bacteriological examination of autopsy materials in cases of suspected infectious diseases;

7) transfer to the pathological anatomy bureau, centralized pathological anatomy bureau and pathological anatomy department of medical records of

inpatients for all those who died during the previous day no later than 10:00 a.m. on the day following the establishment of the fact of death;

8) processing of:

- a medical death certificate (preliminary, final) issued by a physician specializing in "pathological anatomy (adult, pediatric)" on the day of the postmortem examination;

- a medical certificate of perinatal death (preliminary, final) issued by a physician specializing in "pathological anatomy (adult, pediatric)" on the day of the pathological autopsy;

9) registration of the results of the autopsy in the form of a protocol of the pathological examination;

10) availability of a written notification to the judicial investigative bodies to decide on the transfer of the body for forensic medical examination if signs of violent death are detected and the termination of the pathological examination of the body;

11) availability of a written notification from a physician specializing in "pathological anatomy (adult, pediatric)" in the event of the initial detection during an autopsy of signs of an acute infectious disease, food or industrial poisoning, an unusual reaction to a vaccination, as well as an emergency notification to the state sanitary and epidemiological service immediately after their detection;

12) conducting a pathological examination of the placenta:

- in case of stillbirth;
- for all diseases of newborns detected at the time of birth;
- in cases of suspected hemolytic disease of the newborn;
- when the waters break early and when the waters are dirty;
- in case of maternal illnesses accompanied by high temperature in the last trimester of pregnancy;
- in case of obvious anomaly of development or attachment of the placenta;
- if there is a suspicion of congenital anomalies in the development of the fetus;
- in cases of preeclampsia, eclampsia

13) mandatory registration of a fetus weighing less than 500 grams with anthropometric data (weight, height, head circumference, chest circumference);

14) establishment of a pathological anatomical autopsy, depending on the complexity, into the following categories:

- first category;
- second category;
- third category;
- fourth category;

15) establishment by a physician specializing in "pathological anatomy (adult, pediatric)" of the category of pathological anatomical autopsy and the reason for the discrepancy in diagnoses in the event of a discrepancy between the final clinical and pathological anatomical diagnoses

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |

|                                                                                                                                                  | Availability of medical documentation confirming compliance with the criteria for taking individuals with BMD under dynamic observation :<br>1 group of dynamic psychiatric observation - individuals who, due to their mental state, are prone to socially dangerous actions, including those who have the risk of committing violent acts of a sexual nature against minors, as well as those who have committed particularly dangerous acts in a state of insanity, and for whom the court has determined compulsory |                                |                                       |

medical measures in the form of outpatient compulsory treatment;  
2nd group of dynamic psychiatric observation - persons with mental illness who have a disability due to a mental illness, except for mental illnesses specified in diagnostic headings F8 and F9; persons with a diagnosis of F20 "Schizophrenia" within one year after establishment (in this case, if a person is recognized as a person with a disability, he/she shall continue to be observed in the 2nd group of dynamic psychiatric observation);

2A – persons with frequent and severe exacerbations of psychotic symptoms, decompensations, requiring psychopharmacotherapy within the framework of free outpatient treatment, including persons with BMD indicated in diagnostic headings F8 and F9

2B – individuals with stabilized conditions, with a moderately progressive course of the process and spontaneous remissions;  
dynamic drug observation group - persons prone to socially dangerous actions, due to clinical manifestations of drug addiction caused by substance abuse.

Dynamic drug addiction monitoring group

1) BMD due to the use of psychoactive substances in individuals sent by court order to departments for compulsory treatment;

2) BMD due to the use of psychoactive substances in a person who, based on the

conclusion of a forensic drug examination, has been prescribed treatment by a court decision;

3) BMD due to the use of psychoactive substances, in individuals sent from places of deprivation of liberty where compulsory medical measures were applied;

4) BMD due to the use of psychoactive substances, after suffering a psychotic disorder due to the use of psychoactive substances in an inpatient setting;

5) BMD due to the use of psychoactive substances in individuals prone to socially dangerous actions;

6) BMD due to the use of psychoactive substances in individuals who voluntarily gave consent for dynamic observation.

Persons specified in subparagraphs 1) – 5) shall be taken under dynamic observation by decision of the MCC.

Compliance with the periodicity and frequency of observation of persons with mental and behavioral disorders (diseases):

1 group of dynamic psychiatric observation - at least once a month

2nd group of dynamic psychiatric observation:

2A - at least once every three months,

2B - at least once every six months;

dynamic drug addiction observation group - at least six times a year, depending on individual personality characteristics and the course of the disease

Availability of medical documentation confirming

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |  |

| 7 | <p>Availability of an individual treatment plan and rehabilitation program for individuals after discharge from an organization providing medical care in the field of mental health, except for those discharged by court order as having recovered early.</p> <p>In supportive treatment of individuals with BMD, a psychiatrist (narcologist) shall draw up an individual treatment plan and an individual rehabilitation program.</p> <p>The individual treatment plan and individual rehabilitation program shall include:</p> <p>1) diagnostic methods: analysis of the content of surfactants in biological fluids and body tissues, HIV testing, experimental psychological diagnostics, determination of quality of life and social functioning, clinical and biochemical diagnostics, neurophysiological diagnostics;</p> <p>2) drug therapy: psychopharmacotherapy, symptomatic therapy, therapy of comorbid pathology, antagonist therapy using opioid receptor blockers;</p> <p>3) consultative methods: medical, psychological and</p> |  |  |

social counseling of persons dependent on psychoactive substances and codependent persons;

4) training methods: motivational training for continuing supportive anti-relapse therapy, for developing adaptive skills and stress resistance, for developing properties of psychological resistance to repeated involvement in drug addiction;

5) psychotherapeutic methods: individual and group psychotherapy for people dependent on psychoactive substances, individual express psychotherapy for people dependent on psychoactive substances who are in a state of relapse.

Availability of medical documentation confirming the implementation of primary health care by a physician, if a person with primary health care is suspected or identified, except for primary health care requiring emergency and urgent medical and social care:

1) patient identification;

2) diagnostic measures according to clinical protocols;

3) establish a diagnosis and carry out treatment measures of primary health care in accordance with the International Classification of Diseases, 10th revision (hereinafter referred to as ICD-10), which are within the competence of the primary health care physician. If there is a suspicion that a person has a diagnosis of primary health care in accordance with ICD-10, which is not

within the competence, the primary health care physician shall refer him/her to MHO or PMHC according to the territorial attachment;

4) in the event of establishing diagnoses of borderline BMDs that fall within the competence of the primary care physician for the first time in the current year - sending information to MHO or PMHC for territorial attachment about this patient, indicating passport data (last name, first name, patronymic (if any), individual identification number (hereinafter referred to as IIN), residential address), diagnosis and date of diagnosis, for entering data into the MIS no later than 5 working days from the date of diagnosis;

5) carrying out activities when identifying a person at risk of committing suicide who has applied independently, or when examining a minor referred by psychologists;

6) filling out primary medical documentation;

7) conducting a reconciliation with the physician of the temporary residence permit or the temporary residence permit for newly entered patients in the MIS for recording persons with temporary residence permits, monthly, no later than the 5th day of the month following the reporting period.

Presence of a record in the medical documentation confirming the implementation of the following measures by a

psychiatric doctor of MHO or PMHC upon suspicion or identification of a person with a mental disorder, except for mental disorders requiring emergency and urgent medical and social care:

- 1) patient identification;
- 2) diagnostic measures according to clinical protocols;
- 3) prescribing treatment according to clinical protocols (if necessary);
- 4) checking in the MIS for the registration of persons with BMD for availability of information about the applicant. When the diagnosis of BMD is initially established, the information shall be entered into the MIS, including it in the statistical accounting group; if the diagnosis of BMD has been established previously and there is no information in the specified MIS, the information shall be entered, and if there is information, it shall be supplemented;
- 5) decision on the issue of dynamic observation, as well as termination of dynamic observation;
- 6) registration of a referral to the MCC;
- 7) preparation of medical documentation concerning a person with a BMD who requires a medical and social examination;
- 8) registration of documents for persons with mental health problems caused by substance use for referral to compulsory treatment;
- 9) entering information about a person with BMD into the MIS no later than 3

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |

|    | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of anamnesis collection, which shall be assessed according to the following criteria:</p> <p>lack of anamnesis collection;</p> <p>completeness of the anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;</p> <p>development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;</p> <p>2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:</p> <p>lack of diagnostic measures</p> <p>;</p> |  |  |

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been

identified, concomitant diseases that affect the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease. Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

- lack of treatment when indicated;
- prescribing treatment in the absence of indications;
- prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;
- implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;
- unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed

|                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

During planned hospitalization in the inpatient clinical departments of the Republican Scientific and Practical Center for Mental Health, the Center for Mental Health, the head or psychiatrist (narcologist) of the clinical department, admission and diagnostic department shall carry out the following activities:

- 1) patient identification;
- 2) check availability of available medical and other documentation, and, if necessary, refer patients for scheduled and/or additional examinations;
- 3) check for availability of a court decision on hospitalization that has entered into legal force, if any;
- 4) evaluate the mental and somatic state, the results of laboratory diagnostic tests, determine the need for emergency care at the level of the admission and diagnostic department and (or) availability of indications and contraindications for hospitalization;
- 5) establish a preliminary diagnosis, determines the scope of differential diagnostics, observation regimen, therapeutic nutrition and other treatment and diagnostic measures according to clinical diagnostic and treatment protocols;
- 6) fill out primary medical documentation.

Presence of a record in the medical documentation confirming compliance with the requirements for the completeness of the

measures taken during hospitalization in the inpatient clinical department of the Republican Scientific and Practical Center for Health Protection, the Central Mental Health Center for emergency indications.

When hospitalizing in the inpatient clinical department of the Republican Scientific and Practical Center for Mental Health, the Central Mental Health Center for emergency indications, the head or psychiatrist (narcologist) of the clinical department or the admission and diagnostic department, or the doctor on duty shall carry out the following activities:

- 1) patient identification;
- 2) evaluate the mental and somatic state, the results of laboratory diagnostic tests and determine the need for emergency care at the level of the admission and diagnostic department and (or) availability of indications and contraindications for hospitalization;
- 3) establish a preliminary diagnosis, determine the scope of differential diagnostics, observation regimen, therapeutic nutrition and other therapeutic and diagnostic measures according to clinical diagnostic and treatment protocols;
- 4) fill out primary medical documentation

Presence of a record in the medical documentation confirming compliance with the requirements for the completeness of the measures taken during

planned hospitalization in POSTIS (psychiatric organization of a specialized type with intensive supervision). During planned hospitalization in POSTIS, the doctor on duty shall carry out the following activities:

- 1) check availability and compliance of the existing documentation:  
a court decision that has entered into legal force;  
identity document.
- 2) carry out patient identification;
- 3) evaluate the mental and somatic state, the results of laboratory diagnostic tests, determine the need for emergency care at the level of the admission and diagnostic department and (or) availability of indications and contraindications for hospitalization;
- 4) determine the department, establish the observation regime, therapeutic nutrition and other treatment and diagnostic measures according to clinical diagnostic and treatment protocols;
- 5) fill out primary medical documentation

Presence of a record in the medical documentation confirming compliance with the requirements for the completeness of the measures taken after the admission of a person with BMD to the inpatient clinical department.

After a person with BMD is admitted to the inpatient

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |  |

|  | <p>Availability of documentation confirming compliance with monitoring regimes.</p> <p>The following types of observation shall be provided in the clinical inpatient departments of the Republican Scientific and Practical Center for Health Protection, the Central Clinical Center for Health Protection and multidisciplinary city ( regional) hospitals:</p> <p>1) general observation regime – round-the-clock observation without restrictions on movement in the department. The general regime for patients shall be established when:</p> <p>absence of danger to oneself and others;</p> <p>ability to maintain personal hygiene without outside help;</p> <p>2) partial hospitalization regime - the possibility of staying in the department during the day or at night, taking into account the need for his/her adaptation in out-of-hospital conditions, as well as the possibility of carrying out work activities against the background of the treatment and control of symptoms of BMD for resocialization. The partial hospitalization regime shall be established by the decision of the medical commission (hereinafter referred to as MC)</p> |  |  |

consisting of two doctors in the event of:

absence of danger to oneself and others;

ability to maintain personal hygiene without outside help;

stabilization of the mental state, requiring daily, but not round-the-clock observation and control;

3) the regime of medical leave - the possibility of staying outside the department from several hours to several days for gradual adaptation to out-of-hospital conditions, solving everyday and social issues, and also assessing the achieved therapeutic effect. The regime of medical leave shall be established by the decision of the Medical Qualification Commission consisting of two doctors and shall be granted in the event of:

absence of danger to oneself and others;

ability to maintain personal hygiene without outside help;

stabilization of mental state that does not require daily monitoring.

4) enhanced surveillance regime – round-the-clock surveillance and restrictions on movement outside the department. Enhanced surveillance regime shall be established for patients in the following cases:

acute BMD that does not pose a danger to oneself or others;

ability to maintain personal hygiene without outside help;

the absence of mental and somatic disorders requiring a different regime of observation and maintenance;

5) strict observation regime – round-the-clock, continuous observation in the observation ward, constant supervision by medical personnel in the department and outside it. A strict regime for patients shall be established for patients in the following cases:

immediate danger to oneself and others;  
helplessness, that is, the inability to independently satisfy one's vital needs, in the absence of proper care;  
possible causing of significant harm to health if the person is left unattended.

The following types of observation are provided in the clinical inpatient departments of POSTIS:

- 1) general observation regime – round-the-clock observation with movement within the department according to the daily routine, the possibility of participating in occupational therapy outside the department;
- 2) enhanced surveillance regime – round-the-clock surveillance and restrictions on movement within the department;
- 3) strict observation regime – round-the-clock, continuous observation in the observation ward, constant supervision by medical personnel in the department and outside it

Availability of documentation confirming

compliance with the criteria for involuntary hospitalization:

Forced hospitalization shall be permitted based on a court decision.

Forced hospitalization of a person in a hospital before a court decision is made shall be permitted only in cases in accordance with the law.

For each case of forced hospitalization without a court decision, the administration of the organization providing medical care in the field of mental health to persons with a mental, behavioral disorder (disease), within forty-eight hours from the moment the person is admitted to hospital, shall send a written notification to the prosecutor, and also inform the spouse, close relatives and (or) legal representatives if there is information about them.

The forced stay of a person in a hospital shall continue only for the time that the grounds for which the hospitalization was carried out remain in force.

A person hospitalized in a hospital by force, during the first six months, shall be subject to examination by a commission of psychiatrists at least once a month to decide on the extension of hospitalization.

Extension of hospitalization beyond six months shall be carried out by a court decision based on an application from an organization providing medical care in the field of mental health to persons with mental, behavioral disorders (diseases), on the

|    | <p>Availability of documentation (internal orders, regulations,</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |

protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:

1) the quality of anamnesis collection, which shall be assessed according to the following criteria:

lack of anamnesis collection;

completeness of the anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;

development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not

informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results

of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;

unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which shall be assessed according to the following criteria:

achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);

lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;

orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:

1) the quality of anamnesis collection, which shall be assessed according to the following criteria:

lack of anamnesis collection;

completeness of the anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;

development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and

concomitant diseases) shall be reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which

shall be assessed according to the following criteria:

- lack of treatment when indicated;
- prescribing treatment in the absence of indications;
- prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;
- implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;
- unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which shall be assessed according to the following criteria:

- achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);
- lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis

| 41 | <p>Presence of a record in the medical documentation confirming compliance with the requirements for conducting examinations of foreign citizens and minor citizens of the Republic of Kazakhstan. Foreign citizens permanently residing and temporarily staying in the territory of the Republic of Kazakhstan , as well as stateless persons who are intoxicated in a public place, at work, or driving a vehicle, shall be subject to medical examination on a general basis.</p>                                                                                                                                                                                                                                                                                                                                                                                       |  |  |

Medical examination of minor citizens of the Republic of Kazakhstan shall be carried out in the presence of their legal representatives.

Presence of a record in the medical documentation confirming compliance with the requirements for the medical examination of persons delivered in a severe unconscious state.

In a specialized healthcare organization, when a person is delivered in a serious, unconscious condition, a double (with an interval of 30-60 minutes) quantitative study shall be carried out to determine availability of surfactants in the body's biological fluids (blood, urine, saliva) to determine the condition associated with the use of psychoactive substances.

At the time of providing medical care in a specialized healthcare organization, a record shall be made in the patient's medical record about availability (absence) of a person's state of intoxication or the fact of drug use based on the results of a clinical examination and laboratory testing of biological samples, while a Conclusion shall not be drawn up

Presence of a record in the medical documentation confirming compliance with the requirements for the conditions for conducting laboratory research or rapid testing of biological media.

Conducting laboratory research or express testing of biological media (blood or urine if alcohol intoxication is suspected, urine if drug or substance abuse intoxication is suspected) shall be carried out in the following cases:

- 1) the impossibility of a full examination due to the severity of the condition of the person being examined;
- 2) if a medical worker has doubts about a comprehensive assessment of the state of intoxication (mental, behavioral, autonomic and somatoneurological disorders);
- 3) disagreement of the person being examined with the results of the Conclusion;
- 4) re-examination;
- 5) when the fact of drug use is established and there are no signs of intoxication (mental, behavioral, autonomic and somatoneurological disorders);
- 6) in the event of a road traffic accident or commission of an offense involving victims;
- 7) if more than 3 (three) hours have passed since the traffic accident and the offense without casualties

Presence of a record in the medical documentation confirming compliance with the requirements for conducting laboratory research or rapid testing of biological media.

The nature and sequence of conducting biological tests shall be determined by the medical worker conducting the examination, depending

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |

| 3                    | Availability of supporting documentation on the compliance of the treatment and diagnostic measures with the recommendations of clinical protocols                                                                                                                                                                                                                          |                                |                                       |
|                      | Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:<br>1) the total number of identified violations, their structure, possible causes and ways to eliminate them<br>; |                                |                                       |

1) the number of identified violations that led to deterioration in health;

The Service shall carry out an examination: in emergency medical care organizations, an examination of the quality of medical services (assistance) for at least 10% of calls processed per quarter, including all cases: visiting a patient after refusal of hospitalization by a medical organization providing inpatient care; refusal of medical care with an indication of the possible consequences, formalized by an entry in medical documents, including in electronic form, signed by the patient or his/her legal representative, as well as a medical worker; refusal to sign a refusal of medical care by the patient or his/her legal representative, with a corresponding entry about this in the medical documentation, including in electronic form, signed by a medical worker; repeated calls to the same patient for the same disease within 24 hours from the moment of the first call, except for cases: mortality during calls: death before the arrival of the team, death in availability of the team;

The results of the internal examination, including their comparison with the results of the external examination, are presented and discussed at meetings of the Service, in-hospital commissions, at medical conferences with subsequent adoption of organizational decisions, to

|  | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of anamnesis collection, which shall be assessed according to the following criteria:</p> <p>lack of anamnesis collection;</p> <p>completeness of the anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance , allergy status;</p> <p>development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;</p> <p>2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:</p> <p>lack of diagnostic measures ;</p> <p>incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;</p> <p>conducting diagnostic studies provided for by clinical protocols;</p> <p>conducting diagnostic studies with a high, unjustified risk to the patient's health, the</p> |  |  |

justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course

of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) are reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;

unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which shall be assessed according to the following criteria:

achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);

Appendix 15

to the joint order of the Minister  
of Healthcare of the Republic of Kazakhstan  
dated November 15, 2018  
№ KR HCM-32 and  
the Minister of National Economy  
of the Republic of Kazakhstan  
dated November 15, 2018 № 70

## **Criteria for assessing the degree of risk in the sphere of circulation of medicines and medical devices**

### **Chapter 1. General provisions**

1. These Criteria for assessing the degree of risks in the sphere of circulation of medicines and medical devices (hereinafter - the Criteria) have been developed in accordance with subparagraph 16) of Article 10 of the Code of the Republic of Kazakhstan “On Public Health and Healthcare System”, paragraphs 5 and 6 of Article 141 and paragraph 1 Article 143 of the Entrepreneurial Code of the Republic of Kazakhstan, the Rules for the formation of risks assessment and management system by regulatory state bodies, approved by order of the acting Minister of National Economy of the Republic of Kazakhstan dated June 22, 2022 № 48 (registered in the Register of state registration of regulatory legal acts under № 28577) and by order of the acting Minister of National Economy of the Republic of Kazakhstan dated July 31, 2018 № 3 “On approval of the checklist’s form” (registered in the Register of state registration of regulatory legal acts under № 17371).

2. The following concepts are used in these Criteria:

1) a point – a quantitative measure of risk calculation;

2) data normalization – a statistical procedure that involves bringing values measured on various scales to a conventionally common scale;

3) risk - the probability of causing harm as a result of the activities of the subject of control of human life or health, the environment, the legitimate interests of individuals and

legal entities, the property interests of the state, taking into account the severity of its consequences;

4) risks assessment and management system - the process of making management decisions aimed at reducing the probability of adverse factors occurring by distributing subjects (objects) of control according to risk levels for subsequent implementation of preventive control with a visit to the subject (object) of control and (or) inspections conducted for compliance with qualification or permitting requirements for issued permits, requirements for sent notifications in accordance with the Law of the Republic of Kazakhstan “On Permits and Notifications” (hereinafter - verification of compliance with the requirements) in order to limit the freedom of entrepreneurship to the minimum possible extent, while ensuring an acceptable level of risk in the relevant areas of activity, as well as those aimed at changing the level of risk for a specific subject (object) of control and (or) exemption of such subject (object) of control from preventive control with a visit to the subject (object) of control and (or) inspections for compliance with requirements;

5) objective criteria for assessing the degree of risk (hereinafter - objective criteria) - criteria for assessing the degree of risk used to select subjects (objects) of control depending on the degree of risk in a certain field of activity and not directly dependent on the individual subject (object) of control;

6) criteria for assessing the degree of risk - a set of quantitative and qualitative indicators related to the direct activities of the subject of control, features of industry development and factors influencing this development, allowing the subjects (objects) of control to be assigned to various degrees of risk;

7) subjective criteria for assessing the degree of risk (hereinafter - subjective criteria) - criteria for assessing the degree of risk used for selecting subjects (objects) of control and depending on the results of the activities of a particular subject (object) of control;

8) a checklist - a list of requirements for the activities of subjects (objects) of control, non-compliance with which entails a threat to human life and health, the environment, the legitimate interests of individuals and legal entities, the state;

9) sample set (sample) – a list of assessed subjects (objects) classified as a homogeneous group of subjects (objects) of control in a specific area of state control, in accordance with paragraph 2 of Article 143 of the Entrepreneurial Code of the Republic of Kazakhstan.

## **Chapter 2. The procedure for forming risks assessment and management system when conducting preventive control of subjects (objects) of control**

3. Risks management when carrying out preventive control with a visit to the subject (object) of control shall be formed by determining objective and subjective criteria, which are carried out in stages (multi-criteria analysis of decisions).

At the first stage, according to objective criteria, subjects (objects) of control are distributed to one of the following degrees of risk:

1) high risk;

- 2) medium risk;
- 3) low risk.

According to the indicators of the degree of risk according to subjective criteria, the subject (object) of control refers:

- 1) to a high degree of risk - with a risk degree indicator from 71 to 100 inclusive;
- 2) to an average degree of risk - with a risk degree indicator from 31 to 70 inclusive;
- 3) to a low degree of risk - with a risk degree indicator from 0 to 30 inclusive.

4. Criteria for assessing the degree of risk for conducting preventive control of subjects (objects) of control shall be formed by defining objective and subjective criteria.

#### **Paragraph 1. Objective criteria**

5. Determination of risk according to objective criteria shall be carried out depending on the specifics of the area in which state control is carried out, taking into account one of the following criteria:

- 1) level of danger (complexity) of the object;
- 2) the scale of severity of possible negative consequences, harm to the regulated area (region);
- 3) the possibility of an unfavorable incident for human life or health, the legitimate interests of individuals and legal entities, and the state.

6. After analyzing possible risks, subjects (objects) of control shall be distributed into three degrees of risk according to objective criteria (high, medium and low).

7. A high degree of risk includes subjects (objects) of control carrying out activities related to:

- 1) production of medicines;
- 2) manufacturing of medicines;
- 3) wholesale sales of medicines;
- 4) production of medical devices;
- 5) manufacturing of medical devices;

8. A medium degree of risk includes subjects (objects) of control:

- 1) subjects in the field of circulation of medicines and medical devices that carry out retail sales of medicines;
- 2) healthcare organizations providing outpatient care;
- 3) healthcare organizations providing inpatient care and (or) inpatient replacing care;
- 4) healthcare organizations providing emergency medical care and (or) air ambulance services;
- 5) healthcare organizations engaged in the procurement, preservation, processing, storage, and sale of blood and its components.

9. A low degree of risk includes subjects (objects) of control:

- 1) subjects in the field of circulation of medicines and medical devices carrying out retail sales of medicines and having a certificate of good pharmacy practice (GPP);

2) subjects (objects) of control carrying out pharmaceutical activities related to the wholesale and retail sale of medical devices.

10. For subjects (objects) of control classified as high and medium degree of risk according to objective criteria, an inspection for compliance with requirements, preventive control with a visit to the subject (object) of control, preventive control without a visit to the subject (object) of control and an unscheduled inspection shall be conducted.

11. For areas of activity of subjects (objects) of control classified as low degree of risk according to objective criteria, an inspection for compliance with the requirements of preventive control without a visit to the subject (object) of control and an unscheduled inspection shall be conducted.

### **Paragraph 2. Subjective criteria**

12. The determination of subjective criteria in the field of circulation of medicines and medical devices shall be carried out using the following stages:

- 1) formation of a database and collection of information;
- 2) analysis of information and risks assessment.

13. Formation of a database and collection of information are necessary to identify subjects (objects) of control.

The following sources of information shall be used to assess the degree of risk:

- 1) the results of previous inspections and preventive control with visits to subjects (objects) of control;
- 2) the presence of adverse incidents caused by the fault of the subject of control;
- 3) the presence and number of confirmed complaints and appeals;
- 4) the results of preventive control without visiting the subject (object) of control (final documents issued based on the results of preventive control without visiting the subject (object) of control);

- 5) the results of analysis of information provided by state bodies and organizations;

non-compliance, absence and/or presence of a negative conclusion obtained based on the results of quality assessment of medicinal products and medical devices registered in the Republic of Kazakhstan, as well as non-compliance, absence and/or presence of a negative conclusion obtained based on the results of market sampling, including in medical organizations, of medicinal products and medical devices subject to quality control using a risk-based approach.

The following sources of information shall be used to assess the degree of risk when creating a schedule for requirements compliance:

- 1) the results of previous inspections and preventive control with visits to subjects (objects) of control;
- 2) the presence of adverse incidents that arose through the fault of the subject of control;
- 3) the presence and number of confirmed complaints and appeals;

4) results of preventive control without a visit to the subject (object) of control (final documents issued based on the results of preventive control without a visit to the subject (object) of control);

14. Based on available sources of information, data according to subjective criteria, subject to analysis and assessment shall be formed.

Analysis and assessment of subjective criteria allow us to concentrate the conduct of inspection for compliance with requirements and preventive control of the subject (object) of control in relation to the subject (object) of control with the greatest potential risk.

At the same time, the data of subjective criteria previously taken into account and used in relation to a specific subject (object) of control or data for which the statute of limitations has expired in accordance with the legislation of the Republic of Kazakhstan shall not be used in the analysis and assessment.

In relation to subjects of control who have fully eliminated the violations issued based on the results of the previous preventive control with a visit and (or) inspection for compliance with the requirements, their inclusion in the formation of schedules and lists for the next period of state control shall not be allowed.

15. The degree of violations of requirements for subjects (objects) of control in the field of circulation of medicines and medical devices for compliance with qualification requirements shall be determined in accordance with Appendix 1 to these Criteria and the Degree of violation of requirements for subjects (objects) of control in the field of circulation of medicines and medical devices for conducting preventive control of subjects (objects) of control by information sources shall be determined in accordance with Appendix 2 to these Criteria.

16. Based on the priority of the sources of information used and the significance of indicators of the subjective criteria, in accordance with the procedure for calculating the risk degree indicator according to subjective criteria determined in the List of subjective criteria for determining the degree of risk according to subjective criteria in the field of circulation of medicines and medical devices in accordance with Article 138 of the Entrepreneurial Code of the Republic of Kazakhstan in relation to all subjects (objects) in accordance with Appendix 3 to these Criteria, the risk degree indicator shall be calculated according to subjective criteria.

17. Inspection for compliance with requirements and preventive control with a visit to the subject (object) shall be carried out depending on the purpose and types of activity of the objects, in accordance with checklists in the field of circulation of medicines and medical devices according to Appendices 16, 17, 18, 19, 20, 21 and 25 to this joint order.

18. For areas of activity of subjects (objects) of control classified as high-risk, inspections for compliance with requirements shall be determined by criteria, but shall be carried out no more than once a year.

For areas of activity of subjects (objects) of control classified as medium risk, inspections for compliance with requirements shall be determined by criteria, but shall be carried out no more than once every two years.

For areas of activity of subjects (objects) of control classified as low risk, the frequency of inspections for compliance with requirements shall be determined by criteria for assessing the degree of risk, but not more than once every three years.

### **Chapter 3. The procedure for calculating the degree of risk according to subjective criteria**

19. The calculation of the risk degree indicator according to subjective criteria (R) shall be carried out in an automated mode by summing up the risk degree indicator for violations based on the results of previous inspections and preventive control with visits to subjects (objects) of control (SP) and the risk degree indicator according to subjective criteria determined in accordance with paragraph 13 of these Criteria (SC), with subsequent normalization of the values given in the range from 0 to 100 points.

$R_{\text{interm}} = SP + SC$ , where

$R_{\text{interm}}$  - an intermediate indicator of the degree of risk according to subjective criteria,

SP – an indicator of the degree of risk for violations,

SC - an indicator of the degree of risk according to subjective criteria determined in accordance with paragraph 13 of these Criteria.

The calculation shall be made for each subject (object) of control of a homogeneous group of subjects (objects) of control of each sphere of state control. In this case, the list of assessed subjects (objects) of control, classified as a homogeneous group of subjects (objects) of control of one sphere of state control shall form a sample set (sample) for subsequent normalization of data.

20. Based on the data obtained from the results of previous inspections and preventive control with visits to subjects (objects) of control, an indicator of the degree of risk for violations shall be formed, assessed in points from 0 to 100.

If one gross violation is detected from any of the sources of information specified in paragraph 16 of these Criteria, the subject of control shall be assigned a risk indicator of 100 points and shall be subject to inspection for requirements compliance or preventive control with a visit to the subject (object) of control.

$SP_{\text{н}}$  – показатель незначительных нарушений;

If gross violations are not detected, the risk level indicator for violations shall be calculated by the total indicator for violations of a significant and minor degree.

When determining the indicator of significant violations, a coefficient of 0.7 shall be applied.

This indicator shall be calculated using the following formula:

$SP_{\text{с}} = (SP_2 \times 100 / SP_1) \times 0,7$ , where:

SPs – an indicator of significant violations;  
SP<sub>1</sub> – required number of significant violations;  
SP<sub>2</sub> – number of significant violations identified;

When determining the indicator of minor violations, a coefficient of 0.3 shall be applied.  
This indicator shall be calculated using the following formula:

SPm = (SP2 x 100/SP1) x 0,3, where:

SPm – an indicator of minor violations;  
SP1 – required number of minor violations;  
SP2 – number of minor violations identified;

The violation risk indicator (SP) shall be calculated on a scale from 0 to 100 points and shall be determined by summing the indicators of significant and minor violations according to the following formula:

SP = SPs + SPm, where:

SP – an indicator of the risk degree for violations;  
SPs – an indicator of significant violations;  
SPm - an indicator of minor violations.

The resulting value of the risk degree indicator for violations shall be included in the calculation of the risk degree indicator based on subjective criteria.

21. The calculation of the risk degree indicator according to subjective criteria determined in accordance with paragraph 16 of these Criteria shall be made on a scale from 0 to 100 points and shall be carried out using the following formula:

$$SC = \sum_{i=1}^n x_i * w_i, \text{ где}$$

x<sub>i</sub> – an indicator of subjective criterion,  
w<sub>i</sub> – specific weight of the subjective criterion indicator x<sub>i</sub>,  
n – number of indicators.

The resulting value of the risk degree indicator according to subjective criteria, determined in accordance with paragraph 13 of these Criteria, shall be included in the calculation of the risk degree indicator according to subjective criteria.

22. The R indicator values calculated for subjects (objects) shall be normalized to a range from 0 to 100 points. Data normalization shall be carried out for each sample set (sample) using the following formula:

$$R = \frac{R_{\text{нром}} - R_{\text{min}}}{R_{\text{max}} - R_{\text{min}}},$$

R – risk degree indicator (final) according to the subjective criteria of an individual subject (object) of control,

Rmax – the maximum possible value on the risk degree scale according to subjective criteria for subjects (objects) included in one sample set (sample) (upper limit of the scale),

Rmin – the minimum possible value on the risk degree scale according to subjective criteria for subjects (objects) included in one sample set (sample) (lower limit of the scale),

Rinterm - an intermediate indicator of the degree of risk according to subjective criteria, calculated in accordance with paragraph 16 of these Criteria.

#### Appendix 1

to the criteria for assessing  
the degree of risk in the area  
of circulation of medicines  
and medical devices

#### **The degree of violation of requirements for subjects (objects) of control in the sphere of circulation of medicines and medical devices for compliance with qualification requirements**

| №  | Requirements                                                                                                                                                                                                                                                           | Degree of violations |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| 1. | Compliance of a premise or building under the right of ownership or lease or trust management of state property with sanitary rules establishing sanitary and epidemiological requirements for facilities in the field of circulation of medicines and medical devices | gross                |
| 2. | Availability of equipment and furniture, inventory, instruments and apparatus to ensure quality control and compliance with the conditions of production, manufacturing, storage and sale of medicines and medical devices                                             | gross                |
| 3. | Availability of a motor vehicle with appropriate cabinets, refrigeration, and other equipment, if necessary, ensuring compliance with the conditions of storage and sale of medicines and medical devices for a mobile pharmacy for rural settlements                  | gross                |
|    |                                                                                                                                                                                                                                                                        |                      |

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |       |

|     | and release of medicines and medical devices                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |       |
| 9.  | Availability of a staff of employees with appropriate education, work experience, and a specialist certificate for a mobile pharmacy for rural settlements:<br>higher or secondary pharmaceutical education for the head of a mobile pharmacy, as well as for the employees involved in the sale of medicines and medical products. In the absence of specialists with pharmaceutical education, specialists with a medical education who have been trained for their sale shall be allowed to carry out retail sales of medicines and medical devices | gross |
| 10. | Availability of a staff of employees with appropriate education, work experience and a specialist certificate for the manufacture of medical devices and higher or secondary pharmaceutical, medical or technical education                                                                                                                                                                                                                                                                                                                            | gross |
| 11. | Availability of specialization or improvement and other types of advanced training over the last 5 (five) years in the declared subtypes of pharmaceutical activities                                                                                                                                                                                                                                                                                                                                                                                  | gross |
| 12. | Availability of higher or secondary pharmaceutical education (work experience in the specialty - at least three years) for individuals applying to engage in pharmaceutical activities without forming a legal entity                                                                                                                                                                                                                                                                                                                                  | gross |

## Appendix 2

to the criteria for assessing  
the degree of risk in the area  
of circulation of medicines and  
medical devices

**The degree of violation of requirements for subjects (objects) of control in the sphere of circulation  
of medicines and medical devices for conducting preventive control of subjects (objects)  
of control by information sources**

| №                                                                               | Name of criteria | Degree of violation |
|---------------------------------------------------------------------------------|------------------|---------------------|
| Section 1. In relation to medical organizations on the issues of drug provision |                  |                     |
|                                                                                 |                  |                     |

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |             |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 1. | Compliance with the prescription of medicines containing narcotic drugs, psychotropic substances and their precursors during outpatient and inpatient treatment in health care organizations by a doctor of a health care organization who has access to work with narcotic drugs and their precursors                                                                                                                                                                                             | gross       |
| 2. | Compliance with the recording in the patient's medical documents of the prescription of medicines containing narcotic drugs, psychotropic substances and precursors of Tables II, III, IV of the List of narcotic drugs, psychotropic substances and precursors subject to control in the Republic of Kazakhstan (hereinafter - the List), indicating a single dose, method and frequency of administration (injection), duration of treatment, as well as justification for prescribing medicines | gross       |
| 3. | Ensuring the use (taking) of medicines containing narcotic drugs, psychotropic substances of Tables II, III of the List strictly under the supervision of medical personnel at the time of their issuance:<br>1) oral administration, application of transdermal therapeutic systems (plaster, film);<br>2) in the presence of a nurse, injections - in the presence of a doctor                                                                                                                   | significant |
| 4. | Compliance with the rules and procedures for writing prescriptions for medicines containing narcotic drugs, psychotropic substances and precursors                                                                                                                                                                                                                                                                                                                                                 | significant |
| 5. | Availability of a person responsible for storing and issuing special prescription forms                                                                                                                                                                                                                                                                                                                                                                                                            | significant |
| 6. | Ensuring subject-quantitative accounting of special prescription forms                                                                                                                                                                                                                                                                                                                                                                                                                             | gross       |
| 7. | Availability of a safe or metal cabinet for storing special prescription forms. Upon completion of work, the room shall be sealed and (or) stamped. The keys to the room, the seal and (or) the stamp                                                                                                                                                                                                                                                                                              | gross       |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |             |

|      |                                                                                                                                                                                                                                                                         |             |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 108. | Compliance of substances, excipients, consumables and packaging materials with the registration dossier                                                                                                                                                                 | gross       |
| 109. | Carrying out incoming control of raw materials (substances, auxiliary materials), materials, semi-finished products, components; intermediate control during the production process, control of finished pharmaceutical products                                        | gross       |
| 110. | Availability of a quality assurance system in production, documentation and control of its effectiveness                                                                                                                                                                | gross       |
| 111. | Ensuring registration of all technological and auxiliary operations during the production of a separate series of medicines and medical devices                                                                                                                         | gross       |
| 112. | Compliance with the requirements for maintaining documentation of all production processes and materials used in production, the procedure for its storage                                                                                                              | gross       |
| 113. | Compliance with stability testing, shelf-life determination and re-inspection of medicinal products                                                                                                                                                                     | gross       |
| 114. | Ensuring a sufficient number of samples to carry out testing where necessary (arbitration testing)                                                                                                                                                                      | gross       |
| 115. | Availability of markings indicating the status of manufactured products, initial products, packaging materials                                                                                                                                                          | gross       |
| 116. | Carrying out quality control of materials, intermediate products, finished products                                                                                                                                                                                     | gross       |
| 117. | Maintaining a database of side effects of medicines and medical devices                                                                                                                                                                                                 | significant |
| 118. | Availability of a certificate of healthcare specialist for each pharmaceutical worker                                                                                                                                                                                   | gross       |
| 119. | Availability of a state license for pharmaceutical activities and appendices for subtypes of activity or notification on the start of activity<br>.<br>Compliance with the types and subtypes of activities declared upon receipt of the state license and its appendix | gross       |

|      |                                                                                                                                                                                                                                                                                                                                                                                   |             |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 120. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for medical devices), indicated in the labeling of their packages                 | gross       |
| 121. | Ensuring the safety, storage conditions of various groups of medicines and medical devices and their handling by complying with the requirements for the design, arrangement, composition, size of areas, equipment of premises (zones) for storing medicines and medical devices and their operation, ensuring safety                                                            | gross       |
| 122. | Compliance of separate storage of medicines and medical devices from other products in order to avoid any impact on them, protection from the negative effects of light, temperature, moisture and other external factors                                                                                                                                                         | gross       |
| 123. | Keeping records of the expiration dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                             | minor       |
| 124. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                                           | significant |
| 125. | Providing the storage room, including the refrigeration room (chamber), with appropriate equipment for monitoring temperature, air humidity (thermometers, hygrometers, other types of instruments) and their location on the internal walls of the premises away from heating devices based on the results of testing zones of temperature fluctuations for cold and warm season | gross       |
| 126. | Compliance with separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, physical state,                                                                                                                                                                                                                  | gross       |

|      |                                                                                                                                                                                                                                                                                                                                              |       |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
|      | physicochemical properties, exposure to various environmental factors                                                                                                                                                                                                                                                                        |       |
| 127. | Availability of an isolated place for storing medicines, the decision on the circulation of which has not yet been made, expired, returned, withdrawn from the category suitable for supply, for which there are suspicions of falsification, recalled and rejected                                                                          | gross |
| 128. | Ensuring protection from the effects of weather conditions in the areas of acceptance and shipment. Availability of equipment in the areas of acceptance and shipment (ventilation/ air conditioning system, hygrometer, thermometer), equipment for cleaning containers. Availability of an equipped control area for the received products | gross |
| 129. | Separation of zones for acceptance, quarantine, defects, shipment and storage. Availability of a room in which medicines shall be stored in quarantine, clearly marked and with limited access                                                                                                                                               | gross |
| 130. | Availability of common fireproof buildings with insulation by fireproof walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, providing the premises with supply and exhaust ventilation                                                                | gross |
| 131. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and at least 1.2 meters high                                                                            | gross |
| 132. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                                                                       | gross |
|      | Compliance with the storage of flammable and combustible liquid medicines that should not be stored:<br>1) in a completely filled container, the degree of filling is not more than                                                                                                                                                          |       |

|      |                                                                                                                                                                                                                                                                                                                                                                                                                |             |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| 133. | 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, which are filled to no more than 95 percent of the volume;<br>2) with mineral acids (sulfuric, nitric and other acids), compressed and liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with organic substances (potassium chlorate, potassium permanganate) | gross       |
| 134. | Compliance with isolated storage of calcium hypochloride, taking into account its properties                                                                                                                                                                                                                                                                                                                   | gross       |
| 135. | Compliance with the storage of flammable liquids with constant monitoring of the containers condition, their tightness and serviceability                                                                                                                                                                                                                                                                      | gross       |
| 136. | Implementation of measures during storage of explosive drugs against contamination by dust                                                                                                                                                                                                                                                                                                                     | gross       |

| 252. | Carrying out wholesale sales of medical devices related to measuring instruments, in the availability of a certificate on approval of the type of measuring instruments, or a certificate of metrological certification of medical measuring equipment                                                                                                                                                                                                                                                                                                                                                                                       | gross       |
| 253. | <p>Provision of vehicles and equipment used for transportation and compliance with the purposes of their use, to protect products from undesirable effects that lead to loss of quality or violate the integrity of packaging, as well as:</p> <p>1) the possibility of their identification and safety assessment has not been lost;</p> <p>2) were not contaminated with other medicines (dosages), substances and did not contaminate themselves;</p> <p>3) were protected and not exposed to environmental factors.</p> <p>The vehicle and its equipment shall be kept clean and treated with detergents and disinfectants as needed</p> | significant |
| 254. | Compliance with storage conditions during transportation necessary to ensure the quality, safety and effectiveness of medicines, as well as to prevent the risk of counterfeit medicines entering the supply chain                                                                                                                                                                                                                                                                                                                                                                                                                           | gross       |
| 255. | Availability of temperature control devices in vehicles in case of supplies of medicines requiring special transportation conditions. Instrument readings shall be recorded throughout transportation and shall be documented                                                                                                                                                                                                                                                                                                                                                                                                                | gross       |
| 256. | Ensuring the protection of medicines and medical devices from environmental factors (precipitation, dust, sunlight, mechanical damage). Medicines and medical devices prepared for transportation shall be packaged in group containers ( cardboard boxes or stacks) with subsequent packaging in transport                                                                                                                                                                                                                                                                                                                                  | gross       |

|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |       |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
|      | packaging (boxes, cartons, wrapping paper) that meets the requirements of the regulatory document                                                                                                                                                                                                                                                                                                                                                                               |       |
| 257. | <p>Ensuring the execution of shipping documents containing the following information for each item, batch (series) of products:</p> <p>name;</p> <p>dosage (for a medicine);</p> <p>packaging;</p> <p>quantity, unit price;</p> <p>sum;</p> <p>series;</p> <p>best before date;</p> <p>number and validity period of the certificate of conformity (for a medicine or medical device).</p> <p>Corrections, additions, and blots in shipping documents shall not be allowed.</p> | gross |
| 258. | Compliance with the maximum price for the trade name of a medicine during wholesale sales                                                                                                                                                                                                                                                                                                                                                                                       | gross |
| 259. | Availability of a specialist certificate in the field of healthcare for each pharmaceutical worker                                                                                                                                                                                                                                                                                                                                                                              | gross |
| 260. | <p>Availability of a state license for pharmaceutical activities and appendices for subtypes of activity or notification on the start of activity</p> <p>.</p> <p>Compliance with the types and subtypes of activities declared upon receipt of the state license and its appendix</p>                                                                                                                                                                                          | gross |
| 261. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for medical devices), indicated in the labeling of their packages                                                                                                               | gross |
| 262. | Ensuring the safety, storage conditions of various groups of medicines and medical devices and their handling by complying with the requirements for the design, arrangement, composition, size of                                                                                                                                                                                                                                                                              | gross |

|      |                                                                                                                                                                                                                                                                                                                                                                                   |             |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
|      | areas, equipment of premises (zones) for storing medicines and medical devices and their operation, ensuring safety                                                                                                                                                                                                                                                               |             |
| 263. | Observance of separate storage of medicines and medical devices from other products in order to avoid any impact on them, protection from the negative effects of light, temperature, moisture and other external factors                                                                                                                                                         | gross       |
| 264. | Keeping records of the expiration dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                             | minor       |
| 265. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                                           | significant |
| 266. | Providing the storage room, including the refrigeration room (chamber), with appropriate equipment for monitoring temperature, air humidity (thermometers, hygrometers, other types of instruments) and their location on the internal walls of the premises away from heating devices based on the results of testing zones of temperature fluctuations for cold and warm season | gross       |
| 267. | Compliance with separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, physical state, physicochemical properties, exposure to various environmental factors                                                                                                                                            | gross       |
| 268. | Availability of an isolated place for storing medicines, the decision on the circulation of which has not yet been made, expired, returned, withdrawn from the category suitable for supply, for which there are suspicions of falsification, recalled and rejected                                                                                                               | gross       |
| 269. | Ensuring protection from the effects of weather conditions in the zones of acceptance and shipment. Availability of equipment in the zones of acceptance and shipment (ventilation/ air conditioning system, hygrometer, thermometer), equipment for cleaning containers.                                                                                                         | gross       |

Availability of secondary package labeling, including the following information:

- 1) trade name of the medicine;
- 2) international nonproprietary name (if available) in Kazakh, Russian and English;
- 3) name of the manufacturer of the medicine, address. Name of the manufacturer and its address shall be indicated in full or abbreviated (city, country). A trademark shall be indicated when it is granted legal protection in the Republic of Kazakhstan.

If the manufacturer of the medicinal product is not its packager, then the name of the packager, date and time of packaging shall be indicated;

- 4) name of the holder of the registration certificate, his address (city, country);
- 5) dosage form;
- 6) dosage, and (or) activity, and (or) concentration (if applicable) of the active pharmaceutical substance (active pharmaceutical substances);
- 7) the amount of the medicinal product in the package by weight, volume or number of dosage units, depending on the dosage form and type of packaging;
- 8) information on the composition of the medicinal product;
- 9) for medicinal herbal preparations, which are packaged medicinal plant raw materials, the mass of medicinal plant raw materials and (or) active pharmaceutical substance of plant origin shall be indicated at their certain humidity;
- 10) for medicinal products containing narcotic substances, psychotropic substances, their analogs and precursors, the names of these substances and their content in weight units or percentages shall be indicated.

In single-component medicinal products, subject to the authenticity of the name of the medicinal product and the active pharmaceutical substance and the indication of its

dosage, concentration, activity, the composition of the active pharmaceutical substance shall not be indicated;

11) list of excipients:  
for parenteral, ophthalmic medicinal products and drugs for external use, a list of all excipients shall be indicated;  
for infusion solutions, the qualitative and quantitative composition of all excipients shall be indicated;  
for other dosage forms, a list of antimicrobial preservatives, dyes, as well as sugars and ethanol shall be indicated;

12) for infusion solutions that contain more than one active pharmaceutical substance, the value of osmolarity and (or) osmolality shall be indicated;

13) method of administration and, depending on the dosage form, route of injection (the method of administration shall not be indicated for tablets and capsules intended for oral administration);

14) precautions;

15) warning notices;

16) storage conditions, storage features and transportation conditions;

17) conditions of release (with a prescription or without a doctor's prescription);

18) series number;

19) production date (if not entered in the batch number);

20) expiration date: "best before: (date, month, year)" or "(date, month, year)";  
The expiration date is indicated as "best before (month, year)" or "(month, year)", while the expiration date is determined up to and including the last day of the specified month;

21) registration number of the medicinal product in the form of the designation "RK-MP-";

22) barcode (if available);

| 3. | personnel at the time of their dispensing - oral administration, application of transdermal therapeutic systems (patch, film) - in the presence of a nurse, administration of injections - in the presence of a doctor                                                                                                                                                                                                                                |  |  |
| 4. | Compliance with the rules and procedures for writing prescriptions for medicines containing narcotic drugs, psychotropic substances and precursors (hereinafter -NPP Rules)                                                                                                                                                                                                                                                                           |  |  |
| 5. | Presence of a person responsible for storage and issuance of special prescription forms                                                                                                                                                                                                                                                                                                                                                               |  |  |
| 6. | Ensuring subject-quantitative accounting of special prescription forms                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 7. | Availability of a safe or metal cabinet for storing special prescription forms. At the end of the work, the room shall be sealed and (or) stamped. The keys to the room, the seal and (or) the sealer shall be kept by the person in charge                                                                                                                                                                                                           |  |  |
| 8. | Ensuring storage and destruction of unused special prescriptions handed in by relatives of deceased patients. Destruction of prescriptions shall be carried out as prescriptions accumulate, but at least once a month, by burning in the presence of a permanent commission, which shall include a representative of the internal affairs body. The fact of destruction of unused special prescriptions shall be formalized by an appropriate report |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 9.  | Availability of the list of medicines containing narcotic drugs, psychotropic substances of Table II of the List, determined by the order of the head of the healthcare organization, not exceeding a five-day supply, which is used with the permission of the responsible doctor on duty, to provide emergency medical care in a healthcare organization providing inpatient care in the evening and nighttime.                                                                                                                                                                                           |  |  |
| 10. | Ensuring collection and destruction of empty ampoules from medicines containing narcotic drugs, psychotropic substances of Table II of the List, the contents of which are unused or partially used, as well as tablets and patches (transdermal therapeutic systems)                                                                                                                                                                                                                                                                                                                                       |  |  |
| 11. | Availability of an order for a medical worker responsible for issuing a temporary death certificate, ensuring notification of relatives of a deceased cancer patient about handing over unused special prescription forms and medicines containing narcotic and psychotropic substances of Table II of List, as well as acceptance of special prescription forms and unused medicines, containing narcotic and psychotropic substances of Table II of the List after patients died at home. Availability of acts of acceptance and transfer of medicines containing narcotic drugs, psychotropic substances |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |  |

| 3. | Availability of forwarding documents for medicines and medical products                                                                                                                        |                              |                                  |
| 4. | Carrying out activities for the production of medicines or wholesale distribution of medicines                                                                                                 |                              |                                  |

|     |                                                                                                                                                                                                                     |  |  |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | by suppliers of substances or intermediate products                                                                                                                                                                 |  |  |
| 5.  | Compliance of substances, excipients, consumables and packaging materials with the registration dossier                                                                                                             |  |  |
| 6.  | Incoming control of raw materials (substances, auxiliary materials), materials, semi-finished products, components; intermediate control during the production process, control of finished pharmaceutical products |  |  |
| 7.  | Availability of a quality assurance system, documentation and control of its efficacy in production                                                                                                                 |  |  |
| 8.  | Ensuring registration of all technological and auxiliary operations during the production of a separate series of medicines and medical devices                                                                     |  |  |
| 9.  | Compliance with the requirements for maintaining documentation of all production processes and materials used in production, its storage order                                                                      |  |  |
| 10. | Compliance with stability testing, shelf-life establishment, and revalidation of medications .                                                                                                                      |  |  |
| 11. | Ensuring that the number of samples is sufficient for testing when necessary ( arbitration tests)                                                                                                                   |  |  |
| 12. | Availability of markings indicating the status of manufactured products, initial products, packaging materials                                                                                                      |  |  |
| 13. | Quality control of materials , intermediate products, finished products.                                                                                                                                            |  |  |
|     |                                                                                                                                                                                                                     |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                      |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 14. | Maintaining of database of side effects of medicines and medical devices                                                                                                                                                                                                                                                                                             |  |  |
| 15. | Availability of a health specialist certificate for each pharmacy worker                                                                                                                                                                                                                                                                                             |  |  |
| 16. | Availability of a state license for pharmaceutical activities and of attachments for subtypes of activity or notification of the commencement of activity. Compliance with the types and subtypes of activities declared upon receipt of the state license and attachment to it                                                                                      |  |  |
| 17. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for the medical device), indicated in the labeling of their packages |  |  |
| 18. | Ensuring safety, storage conditions and handling of various groups of medicines and medical devices by complying with the requirements for design , arrangement, composition , size of the areas, equipment of premises ( areas) for storage of medicines and medical devices and their operation, ensuring the safety                                               |  |  |
| 19. | Observance of storing medicines and medical devices separate from other products to avoid any impact on them, protection from negative impact of                                                                                                                                                                                                                     |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                               |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | light, temperature, moisture and other external factors                                                                                                                                                                                                                                                                                                                       |  |  |
| 20. | Keeping records of the expiry dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                             |  |  |
| 21. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                                       |  |  |
| 22. | Provision of storage premises, including a refrigerating room (chamber) with appropriate equipment for control of temperature, air humidity (thermometers, hygrometers, other types of devices) and their location on the internal walls of the premises away from heating devices based on the results of testing of temperature fluctuation zones for cold and warm seasons |  |  |
| 23. | Observance of separation during storage of all medicines and medical devices depending on the pharmacological group, administration method, aggregate state, physicochemical properties, exposure to various environmental factors                                                                                                                                            |  |  |
| 24. | Availability of isolated storage space for pending, expired, returned, withdrawn, presumably counterfeit, recalled and rejected medicinal products                                                                                                                                                                                                                            |  |  |
| 25. | Provision of weather protection in the receiving and discharge areas. Availability of equipment in receiving and discharge areas (ventilation/air conditioning system, hygrometer, thermometer), container cleaning equipment. Availability of                                                                                                                                |  |  |

|     |                                                                                                                                                                                                                                                                                                                                      |  |  |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | an equipped area for inspection of received products                                                                                                                                                                                                                                                                                 |  |  |
| 26. | Separation of acceptance, quarantine, defective, discharge and storage areas . Availability of a room in which medicines are stored in quarantine, clearly marked and with limited access                                                                                                                                            |  |  |
| 27. | Availability of common non-combustible buildings with insulation by non-combustible walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, provision of premises with supply and exhaust ventilation                                             |  |  |
| 28. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and 1.2 meters high                                                                             |  |  |
| 29. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                                                               |  |  |
| 30. | Compliance with the storage of flammable and combustible liquid medicines that should not be stored:<br>1) in a completely filled container, the degree of filling must be no more than 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, filled to no more than 95 percent of the volume; |  |  |

|     |                                                                                                                                                                                                                                                      |  |  |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | 2) with mineral acids (sulfuric, nitric and other acids), compressed and liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with organic substances (potassium chlorate, potassium permanganate) |  |  |
| 31. | Compliance with isolated storage of calcium hypochloride, taking into account its properties                                                                                                                                                         |  |  |
| 32. | Compliance with the storage of flammable liquids with constant monitoring of the condition of containers, their tightness and serviceability                                                                                                         |  |  |
| 33. | Implementation of measures in the storage of explosive medicines against their contamination by dust                                                                                                                                                 |  |  |
| 34. | Compliance with separate storage of explosive and flammable medicines containing acids and alkalis                                                                                                                                                   |  |  |
| 35. | Ensuring protection of cylinders with oxygen and flammable gases from heat sources, contact with oil and other greasy substances, and their storage in isolated rooms or under sheds                                                                 |  |  |
| 36. | Observance of conditions of storing dressings in a dry ventilated area in cabinets, drawers, on racks, pallets, trays, in conditions ensuring cleanliness                                                                                            |  |  |
| 37. | Compliance with the conditions of storing medical instruments, devices, appliances, equipment in dry heated rooms at room temperature, with relative humidity not exceeding 65 percent                                                               |  |  |
|     |                                                                                                                                                                                                                                                      |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |

|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 21. | <p>and chemical properties of the medicinal substances included in them;</p> <p>2) doses indicated in the prescription, including the highest single doses, highest daily doses of medicinal products to the patient's age;</p> <p>3) the number on the prescription and the number on the label;</p> <p>4) the patient's surname on the receipt, surname on the label and prescription;</p> <p>5) design of medicines</p> |  |  |
| 22. | Ensuring that the results of control of individual stages of manufacturing solutions for injections and infusions are recorded in the log of control results of individual stages of manufacturing solutions for injections and infusions                                                                                                                                                                                  |  |  |
| 23. | Availability of a nomenclature of concentrates, semi-finished products and intra-pharmacy preparation of medicinal products manufactured in the pharmacy, annually approved by an accredited testing laboratory with which a contract on control and analytical services has been concluded                                                                                                                                |  |  |
| 24. | Holding by each pharmacy worker of a health specialist certificate                                                                                                                                                                                                                                                                                                                                                         |  |  |
| 25. | Availability of a state license for pharmaceutical activities and of attachments for subtypes of activity or notification of the commencement of activity. Compliance with the types and subtypes of activities declared upon receipt of the state license and attachment to it                                                                                                                                            |  |  |
|     |                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                      |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 26. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for the medical device), indicated in the labeling of their packages |  |  |
| 27. | Ensuring safety, storage conditions and handling of various groups of medicines and medical devices by complying with the requirements for design , arrangement, composition , size of areas, equipment of premises (areas) for storage of medicines and medical devices and their operation, ensuring the safety                                                    |  |  |
| 28. | Storage of medicines and medical devices separate from other products to avoid any impact on them, protection from negative impact of light, temperature, moisture and other external factors                                                                                                                                                                        |  |  |
| 29. | Keeping records of the expiry dates of medicines and medical devices on paper or electronic medium                                                                                                                                                                                                                                                                   |  |  |
| 30. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                              |  |  |
| 31. | Provision of storage premises, including a refrigerating room (chamber) with appropriate equipment for control of temperature, air humidity (thermometers, hygrometers , other types of devices) and their location on the                                                                                                                                           |  |  |

|     |                                                                                                                                                                                                                                                                                                     |  |  |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | internal walls of the premises away from heating devices based on the results of testing of temperature fluctuation zones for cold and warm seasons                                                                                                                                                 |  |  |
| 32. | Observance of separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, aggregate state, physicochemical properties, exposure to various environmental factors                                                               |  |  |
| 33. | Availability of isolated storage space for pending, expired, returned, withdrawn, presumably counterfeit, recalled and rejected medicinal products                                                                                                                                                  |  |  |
| 34. | Provision of weather protection in the receiving and discharge areas. Availability of equipment in receiving and discharge areas (ventilation/air conditioning system, hygrometer, thermometer), container cleaning equipment. Availability of an equipped area for inspection of received products |  |  |
| 35. | Separation of receiving, quarantine, defective, discharge and storage areas. Availability of a clearly labeled and restricted access quarantine room where medicines are stored.                                                                                                                    |  |  |
| 36. | Availability of common non-combustible buildings with insulation by non-combustible walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable                                                                                  |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | substances, provision of premises with supply and exhaust ventilation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| 37. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and 1.2 meters high                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 38. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 39. | <p>Compliance with the storage of flammable and combustible liquid medicines that should not be stored:</p> <p>1) in a completely filled container, the degree of filling must be no more than 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, filled to no more than 95 percent of the volume;</p> <p>2) with mineral acids (sulfuric, nitric and other acids), compressed and liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with organic substances (potassium chlorate, potassium permanganate)</p> |  |  |
| 40. | Compliance with isolated storage of calcium hypochloride, taking into account its properties                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
| 41. | Compliance with the storage of flammable liquids with constant monitoring of the condition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |

|     |                                                                                                                                                                                        |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | of containers, their tightness and serviceability                                                                                                                                      |  |  |
| 42. | Implementation of measures in the storage of explosive medicines against their contamination by dust                                                                                   |  |  |
| 43. | Compliance with separate storage of explosive and flammable medicines containing acids and alkalis                                                                                     |  |  |
| 44. | Ensuring protection of cylinders with oxygen and flammable gases from heat sources, contact with oil and other greasy substances, and their storage in isolated rooms or under sheds   |  |  |
| 45. | Observance of storage conditions of dressings in a dry ventilated area in cabinets, drawers, on racks, pallets, trays, in conditions ensuring cleanliness                              |  |  |
| 46. | Compliance with the storage conditions of medical instruments, devices, appliances, equipment in dry heated rooms at room temperature, with relative humidity not exceeding 65 percent |  |  |
| 47. | Compliance with the requirements for interior finishing of premises (areas) for storing medicines and ensuring cleanliness of storage premises and equipment                           |  |  |

| 69. | Storage rooms, safes and cabinets shall be kept closed. After the end of the working day, they shall be sealed and (or) stamped. Keys, seal and (or) sealer shall be kept with the responsible person                                                                                                                                                                                                                            |  |  |
| 70. | Availability of a first aid kit                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| 71. | Availability of a signboard indicating the name of the pharmaceutical activity subject, its organizational and legal form and operation mode in the state and Russian languages                                                                                                                                                                                                                                                  |  |  |
| 72. | Availability of information on telephone numbers and addresses of territorial subdivisions of the state body in the sphere of circulation of medicines and medical devices in a place convenient for the population's viewing                                                                                                                                                                                                    |  |  |
| 73. | Ensuring traceability of medicinal products labeled with identification means by providing by participants of circulation of medicinal products and entities in the sphere of circulation of medicinal products and medical devices of information on launch into circulation, on sale and (or) transfer, as well as on withdrawal of labeled medicinal products from circulation on the territory of the Republic of Kazakhstan |  |  |
|     |                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |

74.

Compliance with the rules of advertising medicinal products and medical devices:

- 1) advertising of medicinal products and medical devices shall be reliable, recognizable without special knowledge or application of special means, exclude comparisons with other pharmaceutical services, medicinal products and medical devices, not to mislead consumers through abuse of their trust, including with regard to characteristics, composition, consumer properties, cost (price), expected results of use, results of research and testing;
- 2) advertising of medicinal products and medical devices shall be in Kazakh and Russian languages, contain complete and reliable information on the medicinal product or medical device, comply with the instruction for medical use of the medicinal product (leaflet-insert), instruction for medical use or operating document for the medical device;
- 3) availability of a conclusion on the compliance of advertising of medicines and medical devices with the requirements of the legislation of the Republic of Kazakhstan in the field of healthcare

Non-admission of advertising of medicines and medical devices:

- 1) not registered in the Republic of Kazakhstan;

- 2) prescription drugs in the media;
- 3) distribution for advertising purposes of samples of medicines dispensed with a doctor's prescription;
- 4) the use of children, their images and voices in advertising of medicines and medical products, except for medicines and medical products for children;
- 5) distribution and placement of advertising of medicines and medical devices in public transport, organizations unrelated to their purpose, use and dispensing, with the exception of advertising of medicines at medical, pharmaceutical conferences, congresses, symposiums and other scientific meetings;
- 6) placement of advertising information on industrial products, prescription forms;
- 7) placement of outdoor (visual) advertising of medicinal products and medical devices;
- 8) use of medical professionals authorized to prescribe medicines and medical devices as distributors of advertisements, except for cases of providing reliable information about medicines and medical devices for scientific or educational purposes, as well as for the purpose of informing patients;
- 9) advertising of pharmaceutical services in the absence of a license for the relevant type of activity ;

10) advertising of pharmaceutical services provided by persons who do not have a certificate of a health care specialist, including foreign specialists;

11) indication in advertising to the public of treatment methods for the following diseases: sexually transmitted diseases, oncology, mental, behavioral disorders (diseases), dangerous infectious diseases, HIV infection, tuberculosis, diabetes mellitus;

12) refer in advertising to the recommendations of scientists, healthcare professionals, as well as government officials who may encourage the use and (or) prescription of medicines and medical devices;

13) present in advertising services, medicines and medical products, biologically active food additives as unique, the safest and most effective;

14) assert that the safety and effectiveness of the medicinal product are due to its natural origin;

15) cause assumptions that the effectiveness of the service provided, treatment with an advertised medicinal product, biologically active food supplement is guaranteed, and the use of the product is not accompanied by the development of side effects ;

16) provide information in advertising that is not directly related to the advertised pharmaceutical service, medicinal product and medical device

|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|----------------------------------|
| 1. | Availability and operation of a documentation system to track receipt and dispatch of medicines and medical devices                                                                                                                                                                                                              |                              |                                  |
| 2. | Ensuring provision of a copy of the product conformity certificate upon request of the subject. Certificates of conformity of medicinal products and medical devices shall be kept for the period of its validity plus one year and shall be available for consumers and (or) state regulatory authorities                       |                              |                                  |
| 3. | Procurement of medicines and medical devices from entities that have a license for pharmaceutical activities and attachment to the license for subtypes of activity: production of medicines, wholesale sales of medicines, or who have notified about the commencement of activities for the wholesale sale of medical products |                              |                                  |
| 4. | Sales of medicines and medical devices to entities licensed for pharmaceutical or medical activities or have notified about the commencement of activities for the sale of medical products                                                                                                                                      |                              |                                  |
|    | The sale of medicinal substances is carried out to pharmacies licensed for pharmaceutical activities                                                                                                                                                                                                                             |                              |                                  |

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 5. | with the right to manufacture, as well as to drug manufacturing organizations licensed for pharmaceutical activities with the right to manufacture medicines                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |  |
| 6. | Wholesale sales of medical devices related to measuring instruments, in the presence of a certificate of approval of the type of measuring instruments, or a certificate of metrological attestation of medical measuring equipment                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |
| 7. | <p>Ensuring the vehicles and equipment used for transportation and conformity with the purpose of their use, to protect products from undesirable effects that result in loss of quality or compromise the integrity of the packaging, and in order that:</p> <p>1) the possibility of their identification and safety assessment is not lost;</p> <p>2) they are not contaminated by other medicinal products (dosage forms), substances and so that they themselves do not contaminate them;</p> <p>3) they are protected and not exposed to environmental factors. The vehicle and its equipment shall be kept clean and treated with detergents and disinfectants as necessary</p> |  |  |
| 8. | Compliance with storage conditions during transportation necessary to ensure the quality, safety and efficacy of medicines, also to prevent the risk of counterfeit medicines entering the supply chain                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
|    | Availability of temperature control devices in vehicles                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 9.  | in case of supplies of medicines requiring special transportation conditions. Instrument readings shall be recorded and documented throughout transportation                                                                                                                                                                                                                                                                                   |  |  |
| 10. | Ensuring protection of medicinal products and medical devices from environmental factors (precipitation, dust, sunlight, mechanical damage). Medicinal products and medical devices prepared for transportation are packed in group containers (cardboard boxes or stacks) with subsequent packing in transport packaging (crates, boxes, wrapping paper) complying with the requirements of the regulatory document                           |  |  |
| 11. | Ensuring the execution of discharge documents containing the following information for each item, batch (series) of products:<br>name;<br>dosage (for a medicine);<br>packaging;<br>quantity, per unit price;<br>sum;<br>series;<br>best before date;<br>number and validity term of the certificate of conformity (for a medicinal product or medical device). Corrections, additions, and blots in discharge documents shall not be allowed. |  |  |
| 12. | Compliance with the maximum price for the trade name of a medicinal product in the wholesale sales                                                                                                                                                                                                                                                                                                                                             |  |  |
| 13. | Holding by each pharmacy worker of a healthcare specialist certificate                                                                                                                                                                                                                                                                                                                                                                         |  |  |
|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                      |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 14. | Availability of a state license for pharmaceutical activities and of attachments for subtypes of activity or notification of the commencement of activity. Compliance with the types and subtypes of activities declared upon receipt of the state license and attachment to it                                                                                      |  |  |
| 15. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the instructions for medical use for medicines and medical devices, operational documents (for the medical device), indicated in the labeling of their packages |  |  |
| 16. | Ensuring safety, storage conditions and handling of various groups of medicines and medical devices by complying with the requirements for design , arrangement, composition , size of the areas, equipment of premises ( areas) for storage of medicines and medical devices and their operation, ensuring the safety                                               |  |  |
| 17. | Storage of medicines and medical devices separate from other products to avoid any impact on them, protection from negative impact of light, temperature, moisture and other external factors                                                                                                                                                                        |  |  |
| 18. | Keeping records of the expiry dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                    |  |  |
|     | Storage of medicines and medical devices in                                                                                                                                                                                                                                                                                                                          |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                               |  |  |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 19. | designated and clearly marked storage areas                                                                                                                                                                                                                                                                                                                                   |  |  |
| 20. | Provision of storage premises, including a refrigerating room (chamber) with appropriate equipment for control of temperature, air humidity (thermometers, hygrometers, other types of devices) and their location on the internal walls of the premises away from heating devices based on the results of testing of temperature fluctuation zones for cold and warm seasons |  |  |
| 21. | Observance of separation during storage of all medicines and medical devices depending on the pharmacological group, administration method, aggregate state, physicochemical properties, exposure to various environmental factors                                                                                                                                            |  |  |
| 22. | Availability of isolated storage space for pending, expired, returned, withdrawn, presumably counterfeit, recalled and rejected medicinal products                                                                                                                                                                                                                            |  |  |
| 23. | Provision of weather protection in the receiving and dispatching areas. Availability of equipment in receiving and shipping areas (ventilation/air conditioning system, hygrometer, thermometer), container cleaning equipment. Availability of an equipped area for inspection of received products                                                                          |  |  |
| 24. | Separation of acceptance, quarantine, defective, dispatch and storage areas. Availability of a room in which medicines are stored in quarantine, clearly                                                                                                                                                                                                                      |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |  |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | marked and with limited access                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| 25. | Availability of common non-combustible buildings with insulation by non-combustible walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, provision of premises with supply and exhaust ventilation                                                                                                                                                                                                                                                            |  |  |
| 26. | Storage of flammable medicines separately from other medicines: provision of fireproof and stable racks and pallets, storage of flammable and combustible liquids in built-in fireproof cabinets with doors at least 0.7 meters wide and 1.2 meters high                                                                                                                                                                                                                                                                                            |  |  |
| 27. | Storage of flammable liquids isolated in separate rooms in glass or metal containers from other groups                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |
| 28. | <p>Compliance with the storage of flammable and combustible liquid medicines that should not be stored:</p> <p>1) in a completely filled container, the degree of filling must not more than 90 percent of the volume. Alcohols in large quantities shall be stored in metal containers, which are filled to no more than 95 percent of the volume;</p> <p>2) with mineral acids (sulfuric, nitric and other acids), compressed and liquefied gases, flammable substances, as well as with inorganic salts that produce explosive mixtures with</p> |  |  |

|     |                                                                                                                                                                                        |  |  |

Compliance with the types and subtypes of activities declared upon receipt of the state license and attachment to it                                                                      |  |  |
| 24. | Ensuring storage and transportation in accordance with the conditions established by the manufacturer in the regulatory and technical document on monitoring the quality and safety of medicines, in the                                                                                                                                             |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                 |  |  |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|     | instructions for medical use for medicines and medical devices, operational documents (for the medical device), indicated in the labeling of their packages                                                                                                                                                                                                                     |  |  |
| 25. | Ensuring safety, storage conditions and handling of various groups of medicines and medical devices by complying with the requirements for design , arrangement, composition , size of areas, equipment of premises (areas) for storage of medicines and medical devices and their operation, ensuring the safety                                                               |  |  |
| 26. | Maintaining separate storage of medicines and medical devices from other products to avoid any impact on them, protection from negative impact of light, temperature, moisture and other external factors                                                                                                                                                                       |  |  |
| 27. | Keeping records of the expiry dates of medicines and medical devices on paper or electronic media                                                                                                                                                                                                                                                                               |  |  |
| 28. | Storage of medicines and medical devices in designated and clearly marked storage areas                                                                                                                                                                                                                                                                                         |  |  |
| 29. | Provision of storage premises, including a refrigerating room (chamber) with appropriate equipment for control of temperature, air humidity ( thermometers, hygrometers , other types of devices) and their location on the internal walls of the premises away from heating devices based on the results of testing of temperature fluctuation zones for cold and warm seasons |  |  |
|     |                                                                                                                                                                                                                                                                                                                                                                                 |  |  |

|     |                                                                                                                                                                                                                                                                                                    |  |  |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 30. | Observance of separation during storage of all medicines and medical devices depending on the pharmacological group, method of administration, aggregate state, physicochemical properties , exposure to various environmental factors                                                             |  |  |
| 31. | Availability of isolated storage space for pending, expired, returned, withdrawn, presumably counterfeit, recalled and rejected medicinal products                                                                                                                                                 |  |  |
| 32. | Provision of weather protection in the receiving and discharge areas. Availability of equipment in receiving and shipping areas (ventilation/air conditioning system, hygrometer, thermometer), container cleaning equipment. Availability of an equipped area for inspection of received products |  |  |
| 33. | Separation of receiving, quarantine, defective, discharge and storage areas . Availability of a clearly labeled and restricted access quarantine room where medicines are stored .                                                                                                                 |  |  |
| 34. | Availability of common non-combustible buildings with insulation by non-combustible walls from neighboring premises that meet fire safety requirements in the absence of separate storage facilities for flammable substances, provision of premises with supply and exhaust ventilation           |  |  |
|     | Storage of flammable medicines separately from other medicines: provision of fireproof and stable                                                                                                                                                                                                  |  |  |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |

weight, volume or number of dosage units depending on the dosage form and type of package;

8) information on the composition of the medicinal product;

9) for herbal medicinal products which are prepackaged medicinal plant raw materials, the weight of medicinal plant raw materials and (or) active pharmaceutical substance of plant origin shall be indicated at their certain moisture content;

10) for medicinal preparations containing in their composition substances subject to control in accordance with the Law of the Republic of Kazakhstan “On narcotic drugs, psychotropic substances, their analogs and precursors and measures to counteract their illicit trafficking and abuse”, the names of these substances and their content in weight units or percent shall be indicated.

In single-component medicinal preparations, provided that the name of the medicinal product and active pharmaceutical substance are authentic and its dosage, concentration, activity are indicated, the composition of the active pharmaceutical substance shall not be indicated;

11) list of auxiliary substances:

for parenteral, ophthalmic drugs and preparations for external use, the list of all auxiliary substances shall be indicated;

for infusion solutions the qualitative and quantitative composition of all auxiliary

substances shall be indicated;

for other dosage forms the list of antimicrobial preservatives, dyes, as well as sugars and ethanol shall be indicated;

12) for infusion solutions containing more than one active pharmaceutical substance, the value of osmolarity and (or) osmolality shall be indicated;

13) method of administration and, depending on the dosage form, route of administration (the method of administration for tablets and capsules intended for oral administration shall not be indicated);

14) precautions;

15) warning notices;

16) storage conditions, storage features and transportation conditions;

17) conditions of release (with a prescription or without a doctor's prescription);

18) series number;

19) production date (if not entered in the batch number);

20) expiration date: “expiration date: (date, month, year)” or “(date, month, year)”;

The expiration date “best before (month, year)” or “(month, year)” shall be indicated, whereby the expiration date shall be determined up to and including the last day of the indicated month;

21) registration number of the medicinal product in the form of the designation “RK-LS-”;

|    | adult, pediatric)" on the day of the pathological autopsy                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |
| 15 | Presence of a record in the medical documentation confirming compliance with the requirement for the registration of autopsy results                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| 16 | <p>If there is a record in the medical documentation confirming compliance with the requirement to terminate the autopsy upon detection of signs of violent death during the postmortem examination of the corpse, the head of the medical organization shall notify the judicial and investigative bodies in writing of the incident to decide on the transfer of the corpse for forensic medical examination. A doctor specializing in "pathological anatomy (adult, pediatric)" shall take measures to preserve the body, organs and tissues of the corpse for further forensic medical examination. A protocol shall be drawn up for the part of the postmortem examination performed, at the end of which the basis for further forensic medical examination shall be indicated. In each case of an interrupted postmortem autopsy, the pathologist shall notify in writing the head of the department, the administration of the healthcare organization where the death occurred, immediately after the autopsy is interrupted.</p> |  |  |
|    | Presence of a record in the medical documentation confirming compliance with the requirement to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |  |

inpatient settings at the secondary and tertiary levels of medical care;

- 2) conducting radioisotope (radionuclide) research methods;
- 3) conducting RNT using RPD;
- 4) production and quality control of manufactured RPDs for compliance with the requirements of pharmacopoeial articles, technical regulations and good manufacturing practice;
- 5) ensuring patient satisfaction with the level and quality of medical care ;
- 6) development, mastering and implementation into practice of modern innovative methods of RND and RNT;
- 7) development, mastering and introduction into production of new RPDs;
- 8) ensuring radiation safety of patients and production and medical personnel, exercising control over the production of radiopharmaceuticals, and the rational use of RND and RNT methods;
- 9) residency training in nuclear medicine;
- 10) participation in the development of regulatory legal acts, standards, instructions, recommendations in the field of nuclear medicine;
- 11) provision of organizational, methodological and advisory assistance to healthcare organizations on issues of nuclear medicine;
- 12) providing consultations in the planning of nuclear medicine centers.

| 14 | <p>be kept until an acceptable level of radioactive decay ( at a distance of 1 meter from the body surface - 20 mSv/h), then the corpse shall be transported.</p> <p>To urgently conduct a pathological examination, the dosimetrist of the RNT department shall calculate the duration of the autopsy procedure according to the radiation standards for Group B personnel.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
|    | <p>Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:</p> <p>1) the quality of anamnesis collection, which shall be assessed according to the following criteria:</p> <p>lack of anamnesis collection;</p> <p>completeness of the anamnesis collection;</p> <p>availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance , allergy status;</p> <p>development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;</p> <p>2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:</p> <p>lack of diagnostic measures ;</p> <p>incorrect conclusion or lack of conclusion based on</p> |  |  |

the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;

the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;

the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the

outcome have not been recognized;

the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. An assessment is made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease. Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

- lack of treatment when indicated;
- prescribing treatment in the absence of indications;
- prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;
- implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;
- unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |

form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

- 1) availability of an examination of the person and a record of data on his/her health condition in the medical record of an outpatient (inpatient) patient, justifying the need for his/her temporary exemption from work;
- 2) issuance of a certificate of temporary disability on the day of discharge of persons undergoing inpatient treatment (including day hospitals, rehabilitation centers) for the entire period of inpatient treatment;
- 3) closing the sick leave certificate and the certificate of temporary disability with the date of discharge from the hospital if the working capacity of the person is fully restored;
- 4) extension of the sick leave and certificate of temporary incapacity for persons who continue to be temporarily incapacitated for a period taking into account the time required for their appearance at a medical worker's clinic or for a medical worker to be called to their home (but not more than for one calendar day). For persons who received treatment outside the region of residence, the time required for arrival at their permanent place of residence shall be taken into account (but not more than four calendar days);
- 5) issuance of a certificate of temporary disability in case of injuries sustained while under the influence of alcohol or drugs, as well

as in case of acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuance of a certificate of temporary disability to persons suffering from mental illnesses, in the event of untimely application to a medical organization in the past days, based on the conclusion of the medical commission of the neuropsychiatric dispensary or a medical worker (psychiatrist) together with the head of the medical organization;

7) issuance of a certificate and a temporary disability sheet to persons referred by a court decision for a forensic medical or forensic psychiatric examination and recognized as incapacitated from the date of admission to the examination;

8) issuing both a sick leave certificate and a certificate of temporary disability to a person combining study with work.

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:

1) the quality of anamnesis collection, which shall be assessed according to the following criteria:

lack of anamnesis collection;

completeness of the anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;

development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures ;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which

shall be assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

- lack of consultation, which led to an erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
the consultation was timely  
; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs

and systems, prescription of drugs without proven clinical effectiveness;  
unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;  
6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;  
7) the achieved result, which shall be assessed according to the following criteria:  
achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);  
lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;  
lack of the expected clinical effect due to the implementation of ineffective treatment and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, the prescription of drugs without proven clinical effectiveness;  
presence of polypharmacy, which led to the

- 3) an extract from the medical records of an outpatient (outpatient, inpatient) with data from mandatory (preliminary and periodic) medical examinations, results of laboratory and functional studies in the form;
- 4) the original medical record of the outpatient patient in accordance with the form;
- 5) sanitary and epidemiological characteristics of working conditions;
- 6) a report on an accident related to work activity, provided by the patient;
- 7) documents confirming the employee's work activity.

Presence of a record in the medical documentation confirming compliance with the requirements for examining temporary disability, issuing a sheet and a certificate of temporary disability (form № 001/y "Inpatient Medical Record", form 052 /y "Outpatient Medical Record", stubs of sheets of temporary incapacity for patients, form № 025/y "Journal for recording the conclusions of the medical advisory commission", form № 029/y "Registration book of sheets of temporary disability", form № 037/y "Certificate № \_\_\_\_\_ on temporary disability of a student, a student of a college, vocational school, on illness, quarantine and other reasons for the absence of a child attending school, a preschool organization (underline as appropriate)",

form № 038/y "Certificate № \_\_\_\_\_ on temporary disability" and others):

- 1) availability of an examination of the person and a record of data on his/her health condition in the medical record of an outpatient (inpatient) patient, justifying the need for his/her temporary exemption from work;
- 2) issuance of a certificate of temporary disability on the day of discharge of persons undergoing inpatient treatment (including day hospitals, rehabilitation centers) for the entire period of inpatient treatment;
- 3) closing the sick leave certificate and the certificate of temporary disability with the date of discharge from the hospital if the working capacity of the person is fully restored;
- 4) extension of the sick leave certificate and temporary disability certificate for persons who continue to be temporarily incapacitated for a period, taking into account the time required for their appearance at a medical worker's clinic or for a medical worker to be called to their home (but not more than for one calendar day). For persons who received treatment outside the region of residence, the time required for arrival at their permanent place of residence shall be taken into account (but not more than four calendar days);
- 5) issuance of a certificate of temporary disability in case of injuries sustained while under the influence of alcohol or drugs, as well

as in case of acute alcohol or drug intoxication, for the entire period of temporary disability;

6) issuance of a certificate of temporary disability to persons suffering from mental illnesses, in the event of untimely application to a medical organization in the past days, based on the conclusion of the medical commission of the neuropsychiatric dispensary or a medical worker (psychiatrist), together with the head of the medical organization;

7) issuance of a certificate and a temporary disability sheet to persons referred by a court decision for a forensic medical or forensic psychiatric examination and recognized as incapacitated from the date of admission to the examination;

8) issuing both a sick leave certificate and a certificate of temporary disability to a person combining study with work.

Availability of documentation (internal orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and internal expertise and its assessment according to the following criteria:

1) the quality of anamnesis collection, which shall be assessed according to the following criteria:

lack of anamnesis collection;

completeness of the anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;

development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures ;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies provided for by clinical protocols;

conducting diagnostic studies with a high, unjustified risk to the patient's health, the justification for conducting diagnostic studies not included in clinical protocols;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which

shall be assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

- lack of consultation, which led to an erroneous interpretation of symptoms

and syndromes that negatively affected the outcome of the disease;  
the consultation was timely  
; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely  
, the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs

and systems, prescription of drugs without proven clinical effectiveness;  
unjustified deviation from the requirements of clinical protocols, presence of polypharmacy, leading to the development of a new pathological syndrome and deterioration of the patient's condition;  
6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;  
7) the achieved result, which shall be assessed according to the following criteria:  
achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);  
lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;  
lack of the expected clinical effect due to the implementation of ineffective treatment and preventive measures without taking into account the characteristics of the course of the disease, concomitant diseases, complications, the prescription of drugs without proven clinical effectiveness;  
presence of polypharmacy, which led to the

orders, regulations, protocols, questionnaires, analytical reports) on the clinical audit conducted by the Patient Support Service and the internal examination of convicts, and its assessment according to the following criteria:

1) the quality of anamnesis collection, which shall be assessed according to the following criteria:

lack of anamnesis collection;

completeness of the anamnesis collection;

availability of data on past, chronic and hereditary diseases, blood transfusions, drug tolerance, allergy status;

development of complications due to tactical errors made during treatment and diagnostic procedures due to poor quality collection of anamnesis;

2) the completeness and validity of the diagnostic studies, which shall be assessed according to the following criteria:

lack of diagnostic measures;

incorrect conclusion or lack of conclusion based on the results of diagnostic studies, leading to incorrect diagnosis and errors in treatment tactics;

conducting diagnostic studies that are not informative for making a correct diagnosis and that lead to an unjustified increase in treatment times and an increase in the cost of treatment;

3) the correctness, timeliness and validity of

the clinical diagnosis, taking into account the results of the studies conducted (in the case of planned hospitalization, studies conducted at the pre-hospital stage are also taken into account), which shall be assessed according to the following criteria:

- the diagnosis is missing, incomplete or incorrect, does not correspond to the International Classification of Diseases;
- the leading pathological syndrome that determines the severity of the disease has not been identified, and concomitant diseases and complications have not been recognized;
- the diagnosis is correct but incomplete, the leading pathological syndrome in the identified complications has not been identified, concomitant diseases that affect the outcome have not been recognized;
- the diagnosis of the underlying disease is correct, but concomitant diseases that affect the treatment outcome have not been diagnosed.

Objective reasons for incorrect and/or untimely diagnosis (atypical course of the underlying disease, asymptomatic course of the concomitant disease, rare complications and concomitant diseases) shall be reflected in the results of the examination. An assessment shall be made of the impact of incorrect and/or untimely diagnosis on subsequent stages of the provision of medical services (assistance);

4) the timeliness and quality of consultations with specialized professionals, which shall be assessed according to the following criteria:

lack of consultation, which led to an erroneous interpretation of symptoms and syndromes that negatively affected the outcome of the disease;

the consultation was timely ; failure to take into account the consultant's opinion when making a diagnosis partially influenced the outcome of the disease;

the consultation was timely , the consultant's opinion was taken into account when making a diagnosis, failure to follow the consultant's treatment recommendations partially affected the outcome of the disease;

The consultant's opinion was wrong and influenced the outcome of the disease.

Availability of documentation confirming the assessment of the objectivity of the reasons for the untimely consultation and the impact of the untimely diagnosis on subsequent stages of the provision of medical services (assistance);

5) the volume, quality and validity of the implementation of treatment measures, which shall be assessed according to the following criteria:

lack of treatment when indicated;

prescribing treatment in the absence of indications;

prescribing ineffective treatment measures without

taking into account the characteristics of the course of the disease, concomitant diseases and complications;

implementation of treatment measures incompletely, without taking into account the functional state of organs and systems, prescription of drugs without proven clinical effectiveness;

presence of polypharmacy, which led to the development of a new pathological syndrome and deterioration of the patient's condition;

6) the absence or development of complications after medical interventions; all complications that arise shall be assessed, including those caused by surgical interventions (delayed surgical intervention, inadequate volume and method, technical defects) and diagnostic procedures;

7) the achieved result, which shall be assessed according to the following criteria:

achieving the expected clinical effect while adhering to the technology of providing medical services (assistance);

lack of clinical effect of treatment and preventive measures due to poor quality of anamnesis collection and diagnostic tests;

lack of the expected clinical effect due to the implementation of ineffective treatment and preventive measures without taking into account the characteristics of the course of the disease,

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
